Minimum ceiling height is 24" (610mm) from top of unit. Note: A 1-1/2" (38mm) clearance around the outer pipe must be maintained except that only a 1" (25mm) clearance is needed at the termination end.

The above listed clearances are minimum distances to combustible materials. This unit may be installed directly on carpeting or vinyl.
RIGID PIPE VENTING SYSTEMS

**Horizontal or Vertical Terminations**

**WARNING:**

Do not combine venting components from different venting systems.

However use of the AstroCap™ and FPI Riser is acceptable with all systems.

This product has been evaluated by Intertek for using a Rigid Pipe Adaptor in conjunction with Duravent Direct-Vent, Selkirk Direct-Temp, Ameri Vent Direct venting and Security Secure Vent systems. Use of these systems with the Rigid Pipe adaptor is deemed acceptable and does not affect the Intertek WHI listing of components.

When using Rigid Vent other than Simpson Dura-Vent, 3 screws must be used to secure rigid pipe to adaptor.
Gas Stoves

H15 Gas Stove

Rigid Pipe Venting Systems
Horizontal or Vertical Terminations

The H15 is approved for a maximum 30 ft. straight vertical, with Rigid Pipe vent systems for Propane and Natural Gas.

The lightly shaded area, , in the diagram shows allowable venting configurations using one 90° elbow and venting out the rear.

The darker shaded area, , in the diagram shows allowable venting configurations using up to two 45° elbows and venting out the top.

Terminations falling in either of the shaded areas must have the Vent Restrictor Position set to “B” (restricted).

- Vent must be supported at offsets.
- Horizontal sections must be supported every 3 feet
- Firestops are required at each floor level and whenever passing through a wall.
- Maintain clearances to combustible materials.
- Minimum of 1’ pipe section between any elbows.

If required by the external termination location the listed alternate termination caps may be used.

Venting Arrangements - Vertical Terminations
Rigid Pipe System
(Propane & Natural Gas)

If required by the external termination location the listed alternate termination caps may be used.

- Vent must be supported at offsets.
- Horizontal sections must be supported every 3 feet
- Firestops are required at each floor level and whenever passing through a wall.
- Maintain clearances to combustible materials.
- Minimum of 1’ pipe section between any elbows.

Max. 3’ (0.9m) (centerline to centerline)
Venting Arrangements - Horizontal Terminations

This diagram shows all allowable combinations of vent runs with horizontal terminations, using one 90° elbow (two 45° elbows equal one 90° elbow).

The lightly shaded area, □, in the diagram shows allowable combinations with Vent Restrictor in position "A" (fully open)

The darker shaded area, □, in the diagram shows allowable combinations with Vent Restrictor in position "B" (restricted)

- Maintain clearances to combustibles.
- Horizontal vent must be supported every 3 feet.

- Firestops are required at each floor level and whenever passing through a wall.

A vent guard may be required as per local codes.

Note: FPI Direct Vent System (Flex) is only approved for horizontal terminations.

Minimum 12" (305mm)

Maximum 20' 6" (6.2m)
**VERTICAL TERMINATION WITH CO-LINEAR FLEX SYSTEM**

The appliance must not be connected to a chimney flue serving a separate solid fuel burning appliance.

This appliance is designed to be attached to two 3" (76mm) co-linear aluminium flex running the full length of the chimney. See the Venting Arrangements chart below for minimum and maximum flue lengths. See chart below for minimum distances from roof. Periodically check that the vent is unrestricted.

Masonry chimneys may take various contours which the flexible liner will accommodate. However, keep the flexible liner as straight as possible, avoid unnecessary bending.

Minimum vertical distance in ft. (m) from roof up to lowest opening in termination cap.

![Diagram showing venting arrangement](image)

The shaded area in the diagram shows the allowable vertical terminations.

The Air Intake pipe must be attached to the inlet air collar of the termination cap.

**Co-linear DV Vertical Termination Cap # 946-529**

- A maximum of two certified joiner kits may be used per length. #948-305 (35 ft)
- Vent Restrictors set at fully closed, Position "B"
- Exhaust Flue
- Outer Pipe with Kit #946-563
- Inner Pipe Adapter with Kit #946-563
- Air Intake
- Co-Linear Flex Adapter with Kit #946-563
