**CLEARANCES TO COMBUSTIBLES**

The clearances listed are MINIMUM distances. Measure the clearance to both the appliance and the chimney connector. **The farthest distance is correct if the two clearances do not coincide.**

For example, if the appliance is set as indicated in one of the figures but the connector is too close, move the stove until the correct clearance to the connector is obtained.

This appliance may be installed only with the clearances as shown in the situations pictured. **Do not combine clearances from one type of installation with another in order to achieve closer clearances.**

This unit can be installed on a solid combustible surface like a wood floor. This unit can also be installed directly on carpeting or vinyl.

Use the minimum clearances shown in the diagrams below:

**H27-NG10 & H27-LP10 Clearances**

- A Left Side Wall to Unit*: 6” / 150 mm
- B Back Wall to Unit: 3” / 75 mm
- C Vertical Vent Pipe to Back Wall: 2” / 50 mm
- E Unit Corner to Wall: 2” / 50 mm
- Unit Top to Alcove Ceiling: 24” / 610 mm

Minimum ceiling height is 24” / 610 mm from top of unit.
Snorkel Terminations

Snorkel Terminations:
For installations requiring a vertical rise on the exterior of the building, 14-inch and 36-inch tall Snorkel Terminations and the Riser Vent are available. Follow the same installation procedures as used for standard Horizontal Termination. NEVER install the snorkel upside down.

Below Grade Snorkel Installation
If the Snorkel Termination must be installed below grade, i.e. basement application, proper drainage must be provided to prevent water from entering the Snorkel Termination. Refer to Rigid Pipe Installation instructions for details. Do not attempt to enclose the Snorkel within the wall, or any other type of enclosure.

Venting Arrangements - Horizontal Terminations using Dura-Vent venting system and/or Riser Vent Termination

The two diagrams show all allowable combinations of straight horizontal termination with one 45° elbow off the unit with Snorkels or FPI Riser Vent. Restrictor position “A”.

Snorkel Termination

Riser Vent Termination
Gas Stoves

VENTING ARRANGEMENTS

All Venting Systems

The shaded areas in the diagram below show all allowable combinations of vertical runs with horizontal terminations. Maximum one 90° elbow (two 45° elbows equal one 90° elbow).

Propane and Natural Gas: Residential, Manufactured and Mobile Homes Installations

May be installed in Manufactured (Mobile) Homes after first sale.

Horizontal Terminations

The shaded area in the diagram below shows all allowable combinations of straight vertical and offset to vertical runs with vertical terminations. Maximum two 45° elbows.

If the vent is ENCLOSED in a chase (min. size 9" x 9") maintain a 1-1/4" clearance to combustibles.

May be installed in Manufactured (Mobile) Homes after first sale.

Vertical Termination Systems for Residential Manufactured and Mobile Homes

Propane and Natural Gas: Residential, Manufactured and Mobile Homes Installations

May be installed in Manufactured (Mobile) Homes after first sale.
The appliance must not be connected to a chimney flue serving a separate solid fuel burning appliance.

This appliance is designed to be attached to two 3" (76mm) co-linear aluminium flex running the full length of the chimney. See the Venting Arrangements chart below for minimum and maximum flue lengths. See chart below for minimum distances from roof. Periodically check that the vent is unrestricted.

Masonry chimneys may take various contours which the flexible liner will accommodate. However, keep the flexible liner as straight as possible, avoid unnecessary bending.

The Air Intake pipe must be attached to the inlet air collar of the termination cap.

**Venting Arrangements - Vertical Terminations with Co-linear Flex System for both Residential & Manufactured Homes into Masonry Fireplaces**

The shaded area in the diagram shows the allowable vertical terminations. Note: Must remove 4 screws from stove collar and rotate 180° to have collar facing straight back. Secure in place with 4 screws.

**Straight Vertical Terminations**

- Minimum vertical distance in ft. (m) from roof up to lowest opening in termination cap

- Vent Restrictors set at fully open, Position "A"
RESIDENTIAL AND MANUFACTURED HOMES / MOBILE HOMES
MINIMUM HORIZONTAL TERMINATION INSTALLATIONS

Planning Your venting Installation

You will require the following components with your new Hampton® Rear Vent Direct Vent Freestanding Gas Stove. Please review your product to make sure you have everything you need. In the event that you are missing any part, contact your dealer. Decorative brass or chrome trim kits are available from Simpson Dura-Vent for their wall thimbles, as well as a square wall thimble cover.

See the “Exterior Vent Terminal Locations” section for requirements. The gas stove is approved for a minimum horizontal termination with the FPI Riser Vent Kit. See the diagram for minimum and maximum pipe lengths.

When planning your installation, it will be necessary to select the proper length of vent pipe for your particular requirements. Determine the minimum clearance to combustibles from the rear of the unit to the wall. It is also important to note the wall thickness. Before cutting the vent hole through the wall ensure that ALL vent and termination clearances (see the “Exterior Vent Terminal locations” section) will be met.

*If this is an outside corner, the minimum distance between the vent and the outside corner is 6” (15cm). See “F” on the diagram in the "Exterior Vent Terminal Locations" section.

Note: These are the minimum pieces required. Other parts may be required for your particular installation.

Minimum components for a Horizontal Installation:

946-544  Horizontal Termination Kit which includes:
1  6-5/8" Dia. x 18" Black Pipe
1  4" Dia. x 18" Aluminum Vent
1  Wall Penetration Heat Shield (Wall Thimble) (2 pcs)
1 640-530/P  Riser Vent Terminal
1  Decorative Wall Trim (Black)
1 948-128  Tube Mill-Pac Screws

Optional Components:

946-204  45° Elbow - 6-5/8” Black pipe and 4” Aluminum Vent
946-205  Vinyl Siding Shield for Riser Vent Terminal
946-208/P  Vent Guard"
