Minimum Clearances to Combustibles

The clearances listed below are minimum distances unless otherwise stated:

A major cause of fires is failure to maintain required clearances (air space) to combustible materials. It is of the greatest importance that this decorative gas appliance be installed only in accordance with these instructions.

Clearance:	Dimension	Measured From:
A: Sides	12" / 305 mm	***From inside edge of faceplate / doors
B: Ceiling	60" / 1524 mm	From Base of Unit
C: Mantel (Min. Height)*	*36" / 914mm 40" / 1016mm	From Base of Unit From Base of Unit
D: Min. Hearth Depth	14" / 356mm	
E: Min. Hearth Width	44" / 1016mm	
G: Max. Mantel Depth	12" / 305 mm	@ 48" (1219mm) from bottom of unit
K: Min. Alcove Width	56" / 1422 mm	
L: Max. Alcove Depth	36" / 914 mm	
M: Optional Mantel Deflector	3-1/2" / 89mm	

Notes: Non-combustible hearth required. If unit is raised 6" from the floor - no hearth is required.
 Otherwise: Min. Hearth requirements - An R value of 1.75 is required to meet the requirements of the hearth in front of this appliance. 1" of Calcium Silicate board available from Regency, part number (296-936) plus 3/8" tile or equivalent would meet this requirement.
 See part instruction sheet 919-133 for non-combustible Calcium Silicate board requirements.
 (J): ***Measured from inside edge of faceplate/doors - Reference Only: 31-9/16" (802mm)

WARNING
 Although this appliance passes safety certification, the hearth in front of the fireplace becomes very hot when the fireplace heats. Do not use the hearth as a seat or shelf.

Note: A 3-1/2" mantel deflector to reduce mantel height to 36" from bottom of unit @ 1" depth.

A non-combustible mantel may be installed at a lower height if the framing is made of metal studs covered with a noncombustible board. The non-combustible mantel when installed at a lower overall height may not be lower than 6 inches from the top of the fireplace opening.
