WARNING:
If the information in these instructions are not followed exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

FOR YOUR SAFETY
Do not store or use gasoline or other flammable vapours and liquids in the vicinity of this or any other appliance.

Installation and service must be performed by a qualified installer, service agency or the gas supplier.

FOR YOUR SAFETY
What to do if you smell gas:
● Do not try to light any appliance
● Do not touch any electrical switch; do not use any phone in your building.
● Immediately call your gas supplier from a neighbour’s phone. Follow the gas supplier’s instructions.
● If you cannot reach your gas supplier, call the fire department.

Tester by:
Installer: Please complete the details on the back cover and leave this manual with the homeowner.
Homeowner: Please keep these instructions for future reference.
To the New Owner:

Congratulations!
You are the owner of a state-of-the-art Excalibur Gas Fireplace by FPI FIREPLACE PRODUCTS INTERNATIONAL LTD. The P95-2 is a hand crafted appliance and has been designed to provide you with all the warmth and charm of a wood fireplace at the flick of a switch. The model P95-2 has been approved by Warnock Hersey for both safety and efficiency. As it also bears our own mark, it promises to provide you with economy, comfort and security for many trouble free years to follow. Please take a moment now to acquaint yourself with these instructions and the many features of your Excalibur Fireplace.

INFORMATION FOR MOBILE / MANUFACTURED HOMES AFTER FIRST SALE

This Excalibur product has been tested and listed by Warnock Hersey as a Direct Vent Wall Furnace to the following standards: VENTED GAS FIREPLACE HEATERS ANSI Z21.88b-2003/CSA 2.33b-2003 and GAS-FIRED APPLIANCES FOR USE AT HIGH ALTITUDES CAN/CGA 2.17-M91.

This Direct Vent System Appliance must be installed in accordance with the manufacturer's installation instructions and the Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280, or the current Standard of Fire Safety Criteria for Manufactured Home Installations, Sites, and Communities ANSI/NFPA 501A, and with CAN/CSA Z240-MH Mobile Home Standard in Canada.

This appliance installation must comply with the manufacturer's installation instructions and local codes, if any. In the absence of local codes follow the current National Fuel Gas Code, ANSI Z223.1 and the current National Electrical Code ANSI/NFPA 70 in the U.S.A., and the current CAN/CGA B149 Gas Installation Code and the current Canadian Electrical Code CSA C22.1 in Canada.

This Excalibur Mobile/Manufactured Home Listed appliance comes factory equipped with a means to secure the unit.

This Excalibur Mobile/Manufactured Home listed appliance comes equipped with a dedicated #8 ground lug to which an 18 gauge copper wire from the steel chassis ground must be attached.

This appliance may only be installed in an aftermarket permanently located, manufactured (mobile) home, where not prohibited by local codes.

This appliance is only use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases, unless a certified kit is used.

We recommend that our products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) or in Canada by Wood Energy Technical Training (WETT).

**SAFETY LABEL**

Copy of Safety Decal for P95-2

For the State of Massachusetts, installation and repair must be done by a plumber or gasfitter licensed in the Commonwealth of Massachusetts.

For the State of Massachusetts, flexible connectors shall not exceed 36 inches in length.

For the State of Massachusetts, the appliances individual manual shut-off must be a t-handle type valve.
IMPORTANT:
SAVE THESE INSTRUCTIONS

The P95-NG2 or P95-LP2 Direct Vent Gas Fireplace must be installed in accordance with these instructions. Carefully read all the instructions in this manual first. Consult the "authority having jurisdiction" to determine the need for a permit prior to starting the installation. It is the responsibility of the installer to ensure this fireplace is installed in compliance with manufacturer’s instructions and all applicable codes.

BEFORE YOU START

Safe installation and operation of this appliance requires common sense, however, we are required by the Canadian Safety Standards and ANSI Standards to make you aware of the following:

INSTALLATION AND REPAIR SHOULD BE DONE BY A QUALIFIED SERVICE PERSON. THE APPLIANCE SHOULD BE INSPECTED BEFORE USE AND AT LEAST ANNUALLY BY A PROFESSIONAL SERVICE PERSON. MORE FREQUENT CLEANING MAY BE REQUIRED DUE TO EXCESSIVE LINT FROM CARPETING, BEDDING MATERIAL, ETC. IT IS IMPERATIVE THAT CONTROL COMPONENTS, BURNERS AND CIRCULATING AIR PASSAGEWAYS OF THE APPLIANCE BE KEPT CLEAN.

DUE TO HIGH TEMPERATURES, THE APPLIANCE SHOULD BE LOCATED OUT OF TRAFFIC AND AWAY FROM FURNITURE AND DRAPERIES.

WARNING: FAILURE TO INSTALL THIS APPLIANCE CORRECTLY WILL VOID YOUR WARRANTY AND MAY CAUSE A SERIOUS HOUSE FIRE.

CHILDREN AND ADULTS SHOULD BE ALERTED TO THE HAZARDS OF HIGH SURFACE TEMPERATURES, ESPECIALLY THE FIREPLACE GLASS, AND SHOULD STAY AWAY TO AVOID BURNS OR CLOTHING IGNITION.

GENERAL SAFETY INFORMATION

1) The appliance installation must conform with local codes or, in the absence of local codes, with the current Canadian or National Gas Codes, CAN1-B149 or ANSI Z223.1 Installation Codes.

2) The appliance when installed, must be electrically grounded in accordance with local codes, or in the absence of local codes with the current National Electrical Code, ANSI/NFPA 70 or CSA C22.1 Canadian Electrical Code.

3) See general construction and assembly instructions. The appliance and vent should be enclosed.

4) This appliance must be connected to the specified vent and termination cap to the outside of the building envelope. Never vent to another room or inside a building. Make sure that the vent is fitted as per Venting instructions.

5) Inspect the venting system annually for blockage and any signs of deterioration.

6) Venting terminals shall not be recessed into a wall or siding.

7) Any safety glass removed for servicing must be replaced prior to operating the appliance.

8) To prevent injury, do not allow anyone who is unfamiliar with the operation to use the fireplace.

9) Wear gloves and safety glasses for protection while doing required maintenance.

10) Be aware of electrical wiring locations in walls and ceilings when cutting holes for termination.

11) Under no circumstances should this appliance be modified. Parts that have to be removed for servicing should be replaced prior to operating this appliance.

12) Installation and any repairs to this appliance should be done by a qualified service person. A professional service person should be called to inspect this appliance annually. Make it a practice to have all of your gas appliances checked annually.

13) Do not slam shut or strike the glass door.

14) Under no circumstances should any solid fuels (wood, paper, cardboard, coal, etc.) be used in this appliance.

15) The appliance area must be kept clean and free of combustible materials, (gases and other flammable vapours and liquids).

INSTALLATION CHECKLIST

1) Locate appliance
   a) Room location, page 6
   b) Clearances to Combustibles, pages 6-7.
   c) Mantle Clearances, page 7
   d) Framing & Finishing Requirements, page 7.
   e) Facing and Hearth Requirements, page 8.
   f) Venting Requirements, pages 9-17.

2) Assemble Top Standoffs, page 9. (NOTE: must be done before installing unit into fireplace.)

3) Install vent, pages 17-21.

4) Make gas and electrical connections. Test the pilot. Must be as per diagram. Page 22.

5) Install brick panels (optional), page 24.

6) Install log set where indicated on pages 24-25.

8) Install Optional Screen Door, page 26.

9) Install optional Wall Switch, Remote Control, or Wall Thermostat, page 28.

10) Final check.

Before leaving this unit with the customer, the installer must ensure that the appliance is firing correctly and operation fully explained to customer.

Emissions from burning wood or gas could contain chemicals known to the State of California to cause cancer, birth defects or other reproductive harm.

Excalibur P95-2 Zero Clearance Direct Vent Gas Fireplace
INSTALLATION

This includes:

1) Clocking the appliance to ensure the correct firing rate (rate noted on label 45,000 Btu/h) after burning appliance for 15 minutes.

2) If required, adjusting the primary air to ensure that the flame does not carbon. First allow the unit to burn for 15-20 min. to stabilize.

CAUTION: Any alteration to the product that causes sooting or carboning that results in damage is not the responsibility of the manufacturer.

LOCATING YOUR GAS STOVE

1) When selecting a location for your stove, ensure that the clearances outlined on this page are met.

2) Provide adequate clearances for servicing.

3) The appliance must be installed on a flat, solid, continuous surface (e.g. wood, metal, concrete). This may be the floor, or raised up on a platform to enhance its visual impact. If the appliance is going to be installed on carpeting, combustible linoleum tile or other combustible material other than wood flooring, the appliance must be installed on a metal or wood panel extending the full width and depth of the appliance.

4) The P95-2 Direct Vent Gas Fireplace can be installed in a recessed position or framed out into the room as in A, B, C, D. See Diagram 1.

5) This appliance is Listed for bedroom installations when used with a Listed Millivolt Thermostat. Some areas may have further requirements, check local codes before installation.

6) The P95-2 Direct Vent Gas Fireplace is approved for alcove installations, which meet the clearances listed on this page.

7) We recommend that you plan your installation on paper using exact measurements for clearances and floor protection before actually installing this appliance. Have a qualified inspector, dealer, or installer review your plans before installation.

Note: For vent terminations see page 10.

MANUFACTURED MOBILE HOME ADDITIONAL REQUIREMENTS

1) Ensure that structural members are not cut or weakened during installation.

2) Ensure proper grounding using the #8 ground lug provided. See page 29.

OPTIONAL DUCT SYSTEM KIT #946-556

The HeatWave Air Duct Kit increases the effectiveness of your fireplace by dispersing warm air from the fireplace to remote locations in the same room or other rooms in your home.

Up to two kits may be installed on the fireplace. Please Note: Only 1 HeatWave kit may be operated at one time. This includes the internal blower option as well.

OPTIONAL HEAT RELEASE KIT #946-570

The Heat Release Kit expels warm air from the fireplace to the outside of the building, allowing the fireplace to be operated with less heat entering the room. The kit may be used on either the left or right side.

Clearances

The clearances listed below are Minimum distances unless otherwise stated:

A major cause of chimney related fires is failure to maintain required clearances (air space) to combustible materials. It is of the greatest importance that this fireplace and vent system be installed only in accordance with these instructions.

Clearance to Combustibles from:
- Back: 0" (0mm)
- Side: 0" (0mm)
- Floor: 0" (0mm)

NOTE: The minimum floor clearance must be maintained from the top surface of the carpeting, tile, etc.

WARNING: Fire hazard is an extreme risk if these clearances are not adhered to.

Clearances for HeatWave and Heat Release Kit

The HeatWave Duct Kit and the Heat Release Kit have different clearance and framing requirements, check the HeatWave and Heat Release manual for details.

* see mantle clearance instructions (page 7).
COMBUSTIBLE MANTELS

Because of the extreme heat this fireplace emits, the mantel clearances are critical. Combustible mantel clearances from top of unit are shown in Diagram below.

Note: A non-combustible mantel may be installed at a lower height if the framing is made of metal studs covered with a non-combustible board.

These drawings are to scale at 1:6 (one inch = 6 inches)
Mantel can be installed anywhere in shaded area or higher using the above scale.

Note: Ensure the paint that is used on the mantel and the facing is "heat resistant" or the paint may discolor.

FRAMING AND FINISHING

1) Determine the total thickness of facing material (e.g. drywall plus ceramic tiles) to allow the finished surface to be flush with the front of the unit. Total facing thickness can vary from 1/2" (13mm) to 1" (32mm) thick.

Non-combustible material extends a minimum of 18-1/4" (464mm) above the front opening

Install Top Standoffs & Side Nailing Strips before unit is slipped into position. See page 9 for assembly details.

2) Frame in the enclosure for the unit with framing material. The framed opening is 50-1/8" high x 53-3/8" wide x 21-1/4" deep (1276mm high x 1346mm wide x 533mm deep).

3) For exterior walls, insulate the enclosure to the same degree as the rest of the house, apply vapour barrier and drywall, as per local installation codes. (Do not insulate the fireplace itself.)

UNIT BASE STAND-OFFS

To accommodate varying thicknesses and finishes of hearth materials, we have increased the overall height of the appliance by a further 1 1/8". This increase is added with the inclusion of two stand-offs at the bottom of the unit, below the outer box, taking the overall height of the framing dimensions from 49" up to 50 1/8".

In the event that you should choose to use thinner materials to finish the hearth, you can omit the stand-offs provided for raising the unit. However, we recommend that you leave the framing dimensions as they are in the manual and alter only the facing requirement by reducing it by the same distance that you have lowered the unit.

Insert the 2 unit base stand-offs underneath the unit as shown in the diagram below. Space the stand-offs centrally, approximately 2 or 2-1/2 feet apart. Ensure that the unit is not unstable.

P95-2 Flat Wall Surround and Tile Kit

The P95-2 Flat Wall Surround, Hearth Pad and Tile Kit cannot be modified in any way. It must be installed as manufactured.

UNIT Flat Wall Surround and Tile Kit Specifications

To accommodate varying thicknesses and finishes of hearth materials, we have increased the overall height of the appliance by a further 1 1/8". This increase is added with the inclusion of two stand-offs at the bottom of the unit, below the outer box, taking the overall height of the framing dimensions from 49" up to 50 1/8".

In the event that you should choose to use thinner materials to finish the hearth, you can omit the stand-offs provided for raising the unit. However, we recommend that you leave the framing dimensions as they are in the manual and alter only the facing requirement by reducing it by the same distance that you have lowered the unit.

Insert the 2 unit base stand-offs underneath the unit as shown in the diagram below. Space the stand-offs centrally, approximately 2 or 2-1/2 feet apart. Ensure that the unit is not unstable.

Excalibur P95-2 Zero Clearance Direct Vent Gas Fireplace
4) Note: The unit does not have to be completely enclosed in a chase. The clearance on top of the unit is 0" to the standoffs so combustible building materials can be laid directly on top of the standoffs. You must maintain clearance from the vent to combustible materials for both rigid and flex, see Vent Clearances, page 6.

Note: 53-3/4" is the minimum height for both flex termination or Simpson Dura-Vent venting.

The HeatWave Duct Kit has different clearance and framing requirements, check the HeatWave manual for details.

**FACING REQUIREMENT**

This fireplace requires a non-combustible material extending from the framing header and sides.

The flanges on the front face of the fireplace are for a facing thickness of 1" (25mm).

**FACING OVER 1" (25mm) THICK**

If the facing material is over 1" (25mm) thick (example: brick or river rock), install the facing around the perimeter of the face. You may wish to make a face template as shown on the diagram.

FPI offers a cover plate template. See next page.

NOTE: If using a brick hearth, the fireplace will need to be raised to accommodate the brick thickness. Example: If the brick is 2" thick, the unit must be raised 1".

**HEARTH REQUIREMENTS**

**Floor Mounted Fireplaces**

Hearth must be under this flange.

Tile, Marble, Brick, or other non-combustible material.

Cement Board

Min. 3/4" (19mm)
Max. 15/16" (24mm)

**Raised Fireplaces**

No hearth is required when the unit is raised 3" (76mm) off of the floor surface

You must take into account the depth of the floor covering (carpet, tile, linoleum, etc.) when determining the height of the fireplace stand.
**OPTIONAL COVER PLATE TEMPLATE**

1) Ensure top clip screws are at top of oblong holes before installation.

2) Position bottom of cover plate over pins located at the bottom of the firebox.

3) Bring cover plate towards the unit and hook top clip over and behind the glass frame.

The top clip may need to be adjusted. Loosen the 2 screws that secure the top clip to let the cover plate settle over and behind the glass frame. Once settled tighten screws.

**UNIT ASSEMBLY PRIOR TO INSTALLATION**

The 2 Top Standoffs must be correctly positioned and attached to the top before unit is slipped into position.

1) Remove the standoffs from the fireplace top.

2) Take each standoff and bend into the correct shape. Bend up at the bend lines until the screw holes in the standoff and the pre-punched screw holes on the fireplace top line up.

3) Attach the standoff securely to the top with 2 screws per standoff (on opposite corners).

**Top Standoff Assembly**

The top standoffs are shipped in a flat position and must be folded into shape and attached.

1) Remove the standoffs from the fireplace top.

2) Take each standoff and bend into the correct shape. Bend up at the bend lines until the screw holes in the standoff and the pre-punched screw holes on the fireplace top line up.

3) Attach the standoff securely to the top with 2 screws per standoff (on opposite corners).

**SIDE NAILING STRIPS**

The side nailing strips come attached to the unit. There are 2 plates, one on the top and bottom that can be folded out as required.

**UNIT ASSEMBLY**

**PRIOR TO INSTALLATION**

The 2 Top Standoffs must be correctly positioned and attached to the top before unit is slipped into position.

**Top Standoff Assembly**

The top standoffs are shipped in a flat position and must be folded into shape and attached.

1) Remove the standoffs from the fireplace top.

2) Take each standoff and bend into the correct shape. Bend up at the bend lines until the screw holes in the standoff and the pre-punched screw holes on the fireplace top line up.

3) Attach the standoff securely to the top with 2 screws per standoff (on opposite corners).

**UNIT ASSEMBLY**

**PRIOR TO INSTALLATION**

The 2 Top Standoffs must be correctly positioned and attached to the top before unit is slipped into position.

**Top Standoff Assembly**

The top standoffs are shipped in a flat position and must be folded into shape and attached.

1) Remove the standoffs from the fireplace top.

2) Take each standoff and bend into the correct shape. Bend up at the bend lines until the screw holes in the standoff and the pre-punched screw holes on the fireplace top line up.

3) Attach the standoff securely to the top with 2 screws per standoff (on opposite corners).

**VENTING INTRODUCTION**

The P95-2 uses the “balanced flue” technology Coaxial system. The inner liner vents products of combustion to the outside while the outer liner draws outside combustion air into the combustion chamber thereby eliminating the need to use heated room air for combustion and losing warm room air up the chimney.

**Note:** These flue pipes must not be connected to any other appliance.

The gas appliance and vent system must be vented directly to the outside of the building, and never be attached to a chimney serving a separate solid fuel or gas burning appliance. Each direct vent gas appliance must use its own separate vent system. Common vent systems are prohibited.
**VENTING**

**FPI Direct Vent System (Flex) Horizontal Terminations Only**

These venting systems, in combination with the P95-2 Direct Vent Gas Fireplace, have been tested and listed as a direct vent heater system by Warnock Hersey. The location of the termination cap must conform to the requirements in the Vent Terminal Locations diagram on page 11.

FPI Direct Vent (Flex) System Termination Kit (Part # 946-615) includes all the parts needed to install the P95-2 with a maximum run of 4 feet.

1) 8" dia. flexible liner (4 ft. length)  
2) 5" dia. flexible liner (4 ft. length)  
3) spring spacers (4)  
4) thimble (2)  
5) AstroCap XL termination cap (1)  
6) screws (12)  
7) tube of Mill Pac (1)  
8) plated screws (8)  
9) screws #8 x 1-1/2" Drill Point, Stainless Steel (4)  
10) vinyl siding standoff

If longer runs are needed, the FPI Direct Vent system (Flex) kit is (Part # 946-616) which includes all the parts needed to install the P95-2 with a maximum 10' run.

1) 8" dia. flexible liner (10 ft. length)  
2) 5" dia. flexible liner (10 ft. length)  
3) spring spacers (7)  
4) thimble (2)  
5) AstroCap XL termination cap (1)  
6) screws (12)  
7) tube of Mill Pac (1)  
8) plated screws (8)  
9) screws #8 x 1-1/2" Drill Point, Stainless Steel (4)  
10) vinyl siding standoff

**Notes:**
1) Liner sections should be continuous without any joints or seams.  
2) Only Flex pipe purchased from FPI may be used for Flex installations.  
3) Horizontal vent must be supported every 3 feet.
**INSTALLATION**

**EXTERIOR VENT TERMINATION LOCATIONS**

- **A** = Clearance above grade, veranda, porch, deck, or balcony *(min. 12"/30cm)*
- **B** = Clearance to window or door that may be opened *(12"/30cm)*
- **C** = Clearance to permanently closed window *(min. 12"/30cm)*
- **D** = Vertical clearance to ventilated soffit located above the terminal within a horizontal distance of *(24"/60cm)* from the centerline of the terminal *(min. 18"/46cm)* check with local code.
- **E** = Clearance to unventilated soffit *(min. 18"/45cm)*
- **F** = Clearance to outside corner: with *AstroCap* Termination Cap *(min 6"/15cm)*, with Dura-Vent Termination Cap *(14"/36cm)*
- **G** = Clearance to inside corner: with *AstroCap* Termination Cap *(min 6"/15cm)*, with Dura-Vent Termination Cap *(12"/30cm)*

**Note:**
- A vent shall not terminate directly above a sidewalk or paved driveway which is located between two single family dwellings and serves both dwellings.
- Only permitted if veranda, porch, deck, or balcony is fully open on a minimum of two sides beneath the floor.
- If the vent termination is accessible, a certified guard shall be installed.
- As specified in CGA B149 Installation Code. Note: Local codes or regulations may require different clearances.
SIMPSON DURA-VENT VENTING

The Simpson Dura-Vent Direct Vent System offers a complete line of component parts for installation of both horizontal and vertical installations. Many items are offered in decorative black, as well as galvanized finish. We recommend using the galvanized finish for installation with the P95-2.

The minimum components required for a basic horizontal termination are:

1. Horizontal Termination Cap
2. 90° Elbow
3. Flue Adapter
4. Wall Thimble
5. Length of pipe to suit wall thickness
   (see chart)

Wall thickness is measured from the back standoffs to the inside mounting surface of termination cap. For siding other than vinyl furring strips may be used, instead of the vinyl siding standoff, to create a level surface to mount the vent terminal. The Terminal must not be recessed into siding. Measure the wall thickness including furring strips.

If a Vinyl Siding Standoff is required (it must be used with vinyl siding), measure to outside surface of wall without siding and add 2 inches.

**Parts not supplied by Dura-Vent**

| 770-994 | Dura-Vent Flue Adaptor                                   |
The diagram shows all allowable combinations of vertical runs with horizontal terminations, using one 90° elbow (two 45° elbows equal one 90° elbow).

**Note:** Must use optional flue adapter (Part # 770-994) when using Simpson Dura-Vent pipe.

**Simpson Dura-Vent**
5" inner diameter
8" outer diameter

**Regency Flex Vent**
5" inner diameter
8" outer diameter

**Note:** FPI Direct Vent System (Flex) is only approved for horizontal terminations.

- Maintain clearances to combustibles as listed on pages 6 to 8.
- Horizontal vent must be supported every 3 feet.
- Firestops are required at each floor level and whenever passing through a wall.

A vent guard should be used whenever the termination is lower than the specified minimum or as per local codes.

Please note that all vertical measurements are taken from the base of the unit excluding risers or bottom stand-offs.
Horizontal Venting with Two (2) 90° Elbows

One 90° elbow = Two 45° elbows.

With these options, max. total pipe length is 30 feet with min. of 10 feet total vertical and max. 8 feet total horizontal.

Please note min. 1 foot between 90° elbows is required.
VENTING ARRANGEMENTS - VERTICAL TERMINATIONS

SIMPSON DURA-VENT DIRECT VENT GS SYSTEM
(Propane & Natural Gas)

The shaded area in the diagram shows all allowable combinations of straight vertical and offset to vertical terminations, using two 90° elbows, with Simpson Dura-Vent Direct Vent GS vent systems for Propane and Natural Gas.

- Vent must be supported at offsets.
- Firestops are required at each floor level and whenever passing through a wall.
- Maintain clearances to combustibles.

Note: Must use optional flue adapter when using Simpson Dura-Vent pipe (Part # 770-994).
The P95-2 is approved for a maximum 40 ft. straight vertical, with **Simpson Dura-Vent Direct Vent GS** vent systems for Propane and Natural Gas, as per the diagram.

The shaded area in the diagram shows all allowable combinations of straight vertical and offset to vertical terminations with **Simpson Dura-Vent Direct Vent GS** vent systems for Propane and Natural Gas. **Maximum two 45° elbows allowed.**

- Vent must be supported at offsets
- Firestops are required at each floor level and whenever passing through a wall.
- Maintain clearances to combustibles as listed on pages 6 to 8.

*Please note that all vertical measurements are taken from the base of the unit excluding risers or bottom stand-offs.*
HORIZONTAL INSTALLATIONS

Install the vent system according to the manufacturer’s instructions included with the components.

1) Set the unit in its desired location. Check to determine if wall studs or roof rafters are in the way when the venting system is attached. If this is the case, you may want to adjust the location of the unit. Rough in the gas preferably on the right side of the unit and the electrical (junction block is on the left side) on the left.

2) Direct Vent pipe and fittings are designed with special twist-lock connections to connect the venting system to the appliance flue outlet. A twist-lock appliance adaptor is an available option that must be used in conjunction with the Simpson Dura-Vent Direct Vent GS system.

3) Put a bead of silicone inside the outer section of the adapter and a bead of Mill Pac on the inner collar. Slip the adapter over the existing inner and outer flue collar and fasten to the outer collar only with the 3 supplied screws (drilling pilot holes will make this easier). Level the fireplace and fasten it to the framing using nails or screws through the nailing strips.

4) Assemble the desired combination of pipe and elbows to the appliance adaptor and twist-lock for a solid connection.

Note: Twist-lock procedure: Four indentations, located on the female ends of pipes and fittings, are designed to slide straight onto the male ends of adjacent pipes and fittings, by orienting the four pipe indentations so they match and slide in to the four entry slots on the male ends, Diagram 1. Push the pipe sections completely together, then twist-lock one section clockwise approximately one-quarter turn, until the two sections are fully locked. The female locking lugs will not be visible from the outside, on the Black Pipe or fittings. They may be located by examining the inside of the female ends.

5) Mark the wall for a 11” x 11” square hole. The center of the square hole should line up with the centerline of the horizontal pipe. Cut and frame the 10 inch square hole in the exterior wall where the vent will be terminated. If the wall being penetrated is constructed of non-combustible material, i.e. masonry block or concrete, a 8” dia. hole is acceptable.

Note: With Dura-Vent, the minimum height is achieved by installing a 90° elbow directly to the flue adaptor.

6) The arrow on the vent cap should be pointing up. Insure that the 1-1/2” clearances to combustible materials are maintained (Diagram 4). Install the termination cap.

Excalibur P95-2 Zero Clearance Direct Vent Gas Fireplace
Note: If installing termination on a siding covered wall, a vinyl siding stand-off or furring strips must be used to ensure that the termination is not recessed into the siding.

7) Before connecting the horizontal run of vent pipe to the vent termination, slide the Wall Thimble (Part # 1247) over the vent pipe.

8) Slide the appliance and vent assembly towards the wall carefully inserting the vent pipe into the vent cap assembly. It is important that the vent pipe extends into the vent cap sufficient distance so as to result in a minimum pipe overlap of 1-1/4 inches. Secure the connection between the vent pipe and the vent cap by attaching the two sheet metal strips extending from the vent cap assembly into the outer wall of the vent pipe. Use the two sheet metal screws provided to connect the strips to the pipe section. See Diagram 6.

9) Install wall thimble in the center of the 11" square and attach with wood screws (Diagram 7).

### VERTICAL TERMINATION

1) Maintain the 1-1/2" clearances (air spaces) to combustibles when passing through ceilings, walls, roofs, enclosures, attic rafter, or other nearby combustible surfaces. Do not pack air spaces with insulation. Check pages 14-16 for the maximum vertical rise of the venting system and the maximum horizontal offset limitations.

2) Set the gas appliance in its desired location. Drop a plumb bob from the ceiling to the position of the appliance flue exit, and mark the location where the vent will penetrate the ceiling. Drill a small hole at this point. Next, drop a plumb bob from the roof to the hole previously drilled in the ceiling, and mark the spot where the vent will penetrate the roof. Determine if ceiling joists, roof rafters or other framing will obstruct the venting system. You may wish to relocate the appliance or to offset, as shown in Diagram 2 to avoid cutting load bearing members.

3) A Firestop spacer must be installed in the floor or ceiling of every level. To install the Firestop spacer in a flat ceiling or wall, cut a 11 inch square hole. Frame the hole as shown in Diagram 3 and install the firestop.

4) Assemble the desired lengths of pipe and elbows. Ensure that all pipes and elbow connections are in the fully twist-locked position and sealed.

5) Cut a hole in the roof centered on the small drilled hole placed in the roof in Step 2. The hole should be of sufficient size to meet the minimum requirements for clearance to combustibles of 1-1/2". Slip the flashing under the shingles (shingles should overlap half the flashing) as per Diagram 4.

6) Continue to assemble pipe lengths.

**Note:** If an offset is necessary in the attic to avoid obstructions, it is important to support the vent pipe every 3 feet, to avoid excessive stress on the elbows, and possible separation. Wall straps are available for this purpose (Diagram 2).

Galvanized pipe is desirable above the roofline due to its higher corrosion resistance. Continue to add pipe sections through the flashing until the height of the vent cap meets the minimum height requirements specified in Diagram 5 or local codes. Note that for steep

</tr>
</tbody>
</table>
roofs, the vertical height must be increased. A poor draft, or down drafting can result from high wind conditions near big trees or adjoining roof lines, in these cases, increasing the vent height may solve the problem.

7) Ensure vent is vertical and secure the base of the flashing to the roof with roofing nails, slide storm collar over the pipe section and seal with a mastic.

8) Install the vertical termination cap by twisting it.

Note: Any closets or storage spaces, which the vent passes through must be enclosed.

</tr>
</tbody>
</table>

**Note:** To make the installation more aesthetically pleasing, we recommend framing out a square to mount the terminal to.

2) Level the fireplace and fasten it to the framing using nails or screws through the nailing strips.

3) Assemble the vent assembly by applying Mill Pac to the 5"(127mm) inner collar of the termination and slipping the 5"(127mm) liner over it at least 1-3/8" (35mm). Fasten with the 3 screws (drilling pilot holes will make this easier). Apply Mill Pac or high temperature silicone to the 8"(203mm) flex pipe and slip it over the 8"(203mm) outer collar of the vent terminal at least 1-3/8"(35mm) and fasten with the 3 screws.

**Note:** If installing termination on a siding covered wall, furring strips must be used to ensure that the termination is not recessed into the siding.

4) Separate the 2 halves of the wall thimble and securely fasten the one with the tabs to the outside wall making sure that the tabs are on top and bottom. Fasten the other thimble half to the inside wall. The thimble halves slip inside each other and can be adjusted for 2 x 4 or 2 x 6 walls. **The liners must slip over the collars a minimum of 1-3/8".**

5) Slip the assembled liner and termination assembly through the thimble making sure the termination cap faces up (there are markings on the cap that show which way is up). This will position the termination cap with proper down slope for draining water. Fasten the cap to the outer wall with the 4 supplied screws.

6) Pull the centre 5"(127mm) liner and outer 8"(203mm) liner out enough to slip over the flue collars of the fireplace. (You may wish to cut the liner shorter to make it more workable.) Do not bend liner more than 90°.

7) Apply Mill Pac over the fireplace inner collar and slip the 5"(127mm) liner down over it and attach with the 3 supplied screws.

8) Do the same with the 8"(203mm) liner.

9) Apply a bead of silicone between the thimble and termination and around the outer edge of the terminal at the wall in order to keep the water out.

**IMPORTANT:** Do not locate termination hood where excessive snow or ice build-up may occur. Be sure to check vent termination area after snow falls, and clear to prevent accidental blockage of venting system. When using snow blowers, make sure snow is not directed towards vent termination area.

**Electrical:** 120 V A.C. System.

**Circulation Fan:** variable speed 200 CFM.

**Log Set:** Ceramic fibre, 7 per set.

**Vent System:** Simpson Dura-Vent Direct Vent System or FPI Flex System.

**HIGH ELEVATION**

This unit is approved in Canada for altitude 0 to 4500 ft. (CAN12.17-M91) & U.S.A ANSI Z223.1.

**GAS LINE INSTALLATION**

The gas line is brought in through the left side of the appliance. The gas valve is situated on the right hand side of the unit and the gas inlet is on the right hand side of the valve.

**Note:** When the gas line is being installed from the left side, be sure to leave room to accommodate servicing of the fan.

The gas line connection may be made of rigid pipe, copper pipe or an approved flex connector. (If you are using rigid pipe, ensure that the valve can be removed for servicing.) Since some municipalities have additional local codes it is always best to consult with your local authorities and the CAN/CGA B149 installation code.

**GAS PIPE PRESSURE TESTING**

The appliance must be isolated from the gas supply piping system by closing its individual manual shut-off valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psig (3.45 kPa). Disconnect piping from valve at pressures over 1/2 psig.
CONVERSION KIT FROM NATURAL GAS TO PROPANE MODEL #770-969
FOR P95-2 USING SIT 820 NOVA GAS VALVE

THIS CONVERSION MUST BE DONE BY A QUALIFIED GAS FITTER
IF IN DOUBT DO NOT DO THIS CONVERSION!!

1) Turn the gas off.
2) Remove the glass frame.
3) Remove the logs, embers, and brick panels (if used).
4) Remove the burner/grate assembly, first by removing the two screws, one on each side of the grate, then pull out the grate.
5) Remove the 2 screws, one on each side of the burner. Slide the burner to the left and then lift out.
6) Pull off the pilot cap to expose the pilot orifice.
7) Unscrew the pilot orifice with the allen key and replace with the LP pilot orifice in the kit and replace pilot cap.
8) Remove burner orifice with a 1/2" wrench and discard. Use another wrench to hold on to the elbow behind the orifice.
9) Reinstall new burner orifice LP stamped #48 and tighten.
10) Remove and discard the 3 pressure regulator mounting screws (A), pressure regulator tower (B) and diagram (G).
11) Insure that the rubber gasket (D) is properly positioned and install the new HI/LO pressure regulator assembly to the valve using the new screws (E) supplied with the kit. Tighten screws securely.
12) Reverse steps 6) to 1).
13) Attach clear label "This unit has been converted to Propane" near or on the serial # decal. Attach white label "This valve has been converted from NG to LPG using SIT conversion Kit Code 0.907.204" onto the valve.
14) Replace yellow "Natural Gas" label with red "Propane" label.
15) Check for gas leaks.
16) Check inlet and outlet pressures.
17) Check operation of flame control.
18) Check for proper flame appearance and glow on logs.
**INSTALLATION**

**OPTIONAL BRICK PANELS**

1) Open the bottom louver door. Loosen the 2 screws holding the Burner ON/OFF switch and bracket to the bottom louver and lift the assembly out.

2) Remove facade.

3) Remove glass door. Remove logs.

**Note:** The logs must not be in the unit.

4) Insert the back brick panel first by carefully slipping it between the back wall of the firebox and the rear log bracket.

5) Put the side panels in next. Slide them in from the front and push them flat up against the wall. Be very careful not to scratch them on the firebox hardware.

6) Position Log 308 across the log landing in Log 306 and rest the bottom of the log against the 5th grate tab.

**LOG SET INSTALLATION**

Read the instructions below carefully and refer to the diagrams. If logs are broken do not use the unit until they are replaced. Broken logs can interfere with the pilot operation.

Log Kit # 770-930 contains the following pieces:

- a) 306 Rear Log 902-306
- b) 307 Middle Left Log 902-307
- c) 308 Center Left Log 902-308
- d) 309 Middle Right Log 902-309
- e) 310 Front Left Log 902-310
- f) 311 Center Left Log 902-311
- g) 312 Front Bottom Log 902-312
- h) Embers 902-154
- i) Vermiculite 902-179

4) Place Log 312 on the front right side of the burner, fitting the log on the 2 pins.

5) Position Log 311 across the notch in Log 306 and rest the bottom of the log into the 2nd grate tab.

6) Position Log 308 across the log landing in Log 311. Rest the bottom of the log against the 5th grate tab.

7) Fit the bottom of Log 307 into the bracket on the left side of the burner.

**Note:** If you will be installing the optional Brick Panels, install the Brick Panels prior to installing the logs.

1) Carefully remove the logs from the box and unwrap them. The logs are fragile, handle with care - do not force into position.

2) Sprinkle the vermiculite all over the top of the base brick panel.

3) Place Log 306 on the rear log support pins with the flat side to the back.

**OPTIONAL BRICK PANELS**

1) Open the bottom louver door. Loosen the 2 screws holding the Burner ON/OFF switch and bracket to the bottom louver and lift the assembly out.

2) Remove facade.

3) Remove glass door. Remove logs.

**Note:** The logs must not be in the unit.

4) Insert the back brick panel first by carefully slipping it between the back wall of the firebox and the rear log bracket.

5) Put the side panels in next. Slide them in from the front and push them flat up against the wall. Be very careful not to scratch them on the firebox hardware.

6) Position Log 308 across the log landing in Log 311. Rest the bottom of the log against the 5th grate tab.

7) Fit the bottom of Log 307 into the bracket on the left side of the burner.

**LOG SET INSTALLATION**

Read the instructions below carefully and refer to the diagrams. If logs are broken do not use the unit until they are replaced. Broken logs can interfere with the pilot operation.

Log Kit # 770-930 contains the following pieces:

- a) 306 Rear Log 902-306
- b) 307 Middle Left Log 902-307
- c) 308 Center Left Log 902-308
- d) 309 Middle Right Log 902-309
- e) 310 Front Left Log 902-310
- f) 311 Center Left Log 902-311
- g) 312 Front Bottom Log 902-312
- h) Embers 902-154
- i) Vermiculite 902-179

4) Place Log 312 on the front right side of the burner, fitting the log on the 2 pins.

5) Position Log 311 across the notch in Log 306 and rest the bottom of the log into the 2nd grate tab.

6) Position Log 308 across the log landing in Log 311. Rest the bottom of the log against the 5th grate tab.

7) Fit the bottom of Log 307 into the bracket on the left side of the burner.

**OPTIONAL BRICK PANELS**

1) Open the bottom louver door. Loosen the 2 screws holding the Burner ON/OFF switch and bracket to the bottom louver and lift the assembly out.

2) Remove facade.

3) Remove glass door. Remove logs.

**Note:** The logs must not be in the unit.

4) Insert the back brick panel first by carefully slipping it between the back wall of the firebox and the rear log bracket.

5) Put the side panels in next. Slide them in from the front and push them flat up against the wall. Be very careful not to scratch them on the firebox hardware.

6) Position Log 308 across the log landing in Log 311. Rest the bottom of the log against the 5th grate tab.

7) Fit the bottom of Log 307 into the bracket on the left side of the burner.

**LOG SET INSTALLATION**

Read the instructions below carefully and refer to the diagrams. If logs are broken do not use the unit until they are replaced. Broken logs can interfere with the pilot operation.

Log Kit # 770-930 contains the following pieces:

- a) 306 Rear Log 902-306
- b) 307 Middle Left Log 902-307
- c) 308 Center Left Log 902-308
- d) 309 Middle Right Log 902-309
- e) 310 Front Left Log 902-310
- f) 311 Center Left Log 902-311
- g) 312 Front Bottom Log 902-312
- h) Embers 902-154
- i) Vermiculite 902-179

4) Place Log 312 on the front right side of the burner, fitting the log on the 2 pins.

5) Position Log 311 across the notch in Log 306 and rest the bottom of the log into the 2nd grate tab.

6) Position Log 308 across the log landing in Log 311. Rest the bottom of the log against the 5th grate tab.

7) Fit the bottom of Log 307 into the bracket on the left side of the burner.
8) Place the top of Log 307 across the notch on Log 311.

9) Place the back of Log 309 against the bracket on the top right side of the burner.

The picture below is a view from the back of the burner.

10) Place the top of Log 309 on Log 308, supported by the knot.

11) Fit Log 310 on the pin and then swing the front end of the log to hit the first grate tab.

12) Place the embers on the front of the burner tray.

13) Test fire to ensure proper light off (make sure flame flows smoothly from one end of burner to the other). If there is any flame hesitation, check that area for any blockage of the burner ports.

14) Reverse steps 1-3 under Optional Brick Panels on page 22.
**GLASS DOOR INSTALLATION**

1) Fit top door bracket over the flange at the top of the firebox.
2) Secure with 3 screws on the bottom.

**OPTIONAL SCREEN DOOR**

1) Attach door bracket to side using 2 screws to the left and right side of the unit.

**FRONT FACADE**

1) Remove the 2 screws from the mounting plate that are on the back of the facade.
2) Place the Front Facade into position by sliding the 2 holes in the bottom brackets over the pins on the base, one on each side.

3) Mount the 2 screws back onto the mounting plate on the rear of the facade through the tab on the glass frame and then tighten screw to secure.

**Adjusting the Plunger:** Loosen the screw that holds that plunger bracket so that you can remove the plunger.

4) Slide Bottom Louver into position. On each side secure the bottom screw first into the side bracket. Do not overtighten, leave slightly loose to allow the louver to move freely.

5) Attach the two control boxes to the bottom unit base and tighten the 2 screws on the left side and 1 screw on the right side.

**Secure left side with 2 screws and right side with one screw.**

Once the plunger has been removed take a pin and put it in the hole that is in the round part of the plunger and adjust it accordingly by turning it to the left or right.

**Adjust plunger by turning it to the left or right with a pin.**
**ACCENT KIT INSTALLATION**

1. Remove the rivets from the surround by pulling out the hoseclamp with a screwdriver or plier. Re-install the rivets by putting them through the holes on the sides of the surround.

2. Take the hoseclamps and put them over the back of each rivet. Squeeze the hoseclamp to secure onto rivets ensuring that the hoseclamp is touching the back side of the surround. The hoseclamp can now be released.

3. Remove the handles by removing the nut and screw. Install the new handles by placing them in position over the holes on the surround louver. Put the screws through the holes and secure them by tightening them with a nut.

4. Place the emblem over the emblem design on the surround. Insert the studs through the holes. To secure them first put on the split lock washer and then the nut and tighten.

5. Remove the 2 studs on the sides of the Hood. Insert the new studs through the holes and secure them by first putting on the washer and then tighten with a nut.

**DOUBLE & SINGLE DOOR OPTION**

1. Remove the handles by removing the nut and screw. Install the new handles by placing them in position over the holes on the door(s). Put the studs through the holes and secure them by tightening them with a nut.

2. Take the hoseclamps and put them over the back of each rivet. Squeeze the hoseclamp to secure onto rivets ensuring that the hoseclamp is touching the back side of the surround. The hoseclamp can now be released.
INSTALLATION

Option 1: REMOTE CONTROL

Use the Excalibur Remote Control Kit approved for this unit. Use of other systems may void your warranty.

The remote control kit comes with a hand held transmitter, a receiver and a wall mounting plate.

1) Choose a convenient location on the wall to install the receiver and the receptacle box (protection from extreme heat is very important). Run wires from the fireplace to that location. Use the Thermostat Wire Table.

2) Connect the two wires to the gas valve. See diagram below.

3) Install 3 AAA alkaline batteries in transmitter and 4 AA alkaline batteries in the receiver. Install the receiver and its cover in the wall. Switch the remote receiver to “remote” mode. The remote control is now ready for operation.

Option 2: WALL SWITCH

1) Run the wire through the right or left side inlet opening. Be careful not to damage wire.

Note: We recommend a maximum of 15’ of wire but if you wish to go with a longer run, use the Thermostat Wire Table.

2) Connect the wire to the wall switch and install into the receptacle box.

CAUTION
Do not connect millivolt wall switch wire to a 120V wire.

Option 3: WALL THERMOSTAT

A wall thermostat may be installed if desired, connect the wires as per the wiring diagram. Use the table below to determine the maximum wire length.

Note: Preferable if the thermostat is installed on an interior wall.

Excalibur offers an optional programmable thermostat but any 250-750 millivolt rated non-anticipator type thermostat that is CSA, ULC or UL approved may be used.

CAUTION
Do not connect millivolt wall thermostat wires to a 120V wire.

Thermostat Wire Table

<table>
<thead>
<tr>
<th>Wire Size</th>
<th>Max. Length</th>
</tr>
</thead>
<tbody>
<tr>
<td>14 GA.</td>
<td>50 Ft.</td>
</tr>
<tr>
<td>16 GA.</td>
<td>32 Ft.</td>
</tr>
<tr>
<td>18 GA.</td>
<td>20 Ft.</td>
</tr>
<tr>
<td>20 GA.</td>
<td>12 Ft.</td>
</tr>
<tr>
<td>22 GA.</td>
<td>9 Ft.</td>
</tr>
</tbody>
</table>
Caution: Ensure that the wires do not touch any hot surfaces and are away from sharp edges.

CAUTION: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation.

NOTE: Even if the fan is not purchased with the unit, it is still a good idea to bring power to the receptacle box (provided with the unit) in case the fan is installed at a later date.
OPERATING INSTRUCTIONS

1) Read and understand these instructions before operating this appliance.

2) Check to see that all wiring is correct and enclosed to prevent possible shock.

3) Check to ensure there are no gas leaks.

4) Make sure the glass in the door frame is properly positioned. Never operate the appliance with the glass removed.

5) Verify that the venting and cap are unobstructed.

6) Ensure that the brick panels are installed.

7) Verify log placement. If the pilot cannot be seen when lighting the unit, the logs have been incorrectly positioned.

8) The unit should never be turned off, and on again without a minimum of a 60 second wait.

3) Turn gas control knob counter clockwise so indicator points to the “PILOT” position. Depress the gas control knob fully. Depress the igniter button several times until the pilot lights. After approximately one minute, release the gas control knob. The pilot flame should continue to burn. If the pilot does not remain lit, repeat operation allowing a longer period before releasing gas control knob.

4) When the pilot stays lit, turn the gas knob further counter clockwise to the "ON" position.

5) Use the wall switch, thermostat or remote control to turn on the unit.

6) Rotate the flame height regulator to adjust the flame height higher or lower.

LIGHTING PROCEDURE

IMPORTANT Gas cock knob cannot be turned from “PILOT” to “OFF” unless it is partially depressed.

1) Turn burner OFF using “ON/OFF” switch.

2) Turn gas control knob so indicator points to “OFF” position and allow 5 minutes for any gas in the combustion chamber to escape.

DO NOT BURN THE APPLIANCE WITHOUT THE GLASS FRONT IN PLACE.

During the first few fires, a white film may develop on the glass front as part of the curing process. The glass should be cleaned or the film will bake on and become very difficult to remove. Use a non-abrasive cleaner and NEVER clean the glass while it is hot.

AERATION ADJUSTMENT

The air shutter can be adjusted by moving the adjusting wire up or down. The wire is accessed through the bottom louver opening. Open the air shutter for a blue flame or close for a more yellow flame. The burner aeration is factory set but may need adjusting due to either the local gas supply or altitude. This adjustment is performed by the gas fitter.

Minimum Air Shutter Opening:
5/16” Natural Gas
3/8” Propane

CAUTION: Carbon will be produced if air shutter is closed too much.

Note: Any damage due to carboning resulting from improperly setting the aeration controls is NOT covered under warranty.

SHUTDOWN PROCEDURE

1) Use the wall switch, thermostat or remote control to turn off the main burner.

2) Turn the main gas control clockwise to the "OFF" position to turn off the pilot.

3) Turn off all electric power to appliance if service is to be performed.

FIRST FIRE

The first fire in your stove is part of the paint curing process. To ensure that the paint is properly cured, it is recommended that you burn your fireplace for at least four (4) hours the first time before you use it with the fan on.

When first operated, the unit will release an odor caused by the curing of the paint, the burning off of any oils remaining from manufacturing. Smoke detectors in the house may go off at this time. Open a few windows to ventilate the room for a couple of hours.

The glass panel may require cleaning after the unit has cooled down.

DO NOT ATTEMPT TO CLEAN THE GLASS WHILE IT IS HOT.

Note: When the glass is cold and the appliance is lit, it may cause condensation and fog the glass. This condensation is normal and will disappear in a few minutes as the glass heats up.

AERATION ADJUSTMENT

The air shutter can be adjusted by moving the adjusting wire up or down. The wire is accessed through the bottom louver opening. Open the air shutter for a blue flame or close for a more yellow flame. The burner aeration is factory set but may need adjusting due to either the local gas supply or altitude. This adjustment is performed by the gas fitter.

Minimum Air Shutter Opening:
5/16” Natural Gas
3/8” Propane

CAUTION: Carbon will be produced if air shutter is closed too much.

Note: Any damage due to carboning resulting from improperly setting the aeration controls is NOT covered under warranty.

SHUTDOWN PROCEDURE

1) Use the wall switch, thermostat or remote control to turn off the main burner.

2) Turn the main gas control clockwise to the "OFF" position to turn off the pilot.

3) Turn off all electric power to appliance if service is to be performed.

FIRST FIRE

1) Use the wall switch, thermostat or remote control to turn off the main burner.

2) Turn the main gas control clockwise to the "OFF" position to turn off the pilot.

3) Turn off all electric power to appliance if service is to be performed.

FIRST FIRE

The first fire in your stove is part of the paint curing process. To ensure that the paint is properly cured, it is recommended that you burn your fireplace for at least four (4) hours the first time before you use it with the fan on.

When first operated, the unit will release an odor caused by the curing of the paint, the burning off of any oils remaining from manufacturing. Smoke detectors in the house may go off at this time. Open a few windows to ventilate the room for a couple of hours.

The glass panel may require cleaning after the unit has cooled down.

DO NOT ATTEMPT TO CLEAN THE GLASS WHILE IT IS HOT.

Note: When the glass is cold and the appliance is lit, it may cause condensation and fog the glass. This condensation is normal and will disappear in a few minutes as the glass heats up.
NORMAL OPERATING SOUNDS OF GAS APPLIANCES

It is possible that you will hear some sounds from your gas appliance. This is perfectly normal due to the fact that there are various gauges and types of steel used within your appliance. Listed below are some examples. All are normal operating sounds and should not be considered as defects in your appliance.

Blower:
Excalibur gas appliances use high tech blowers to push heated air farther into the room. It is not unusual for the fan to make a “whirring” sound when ON. This sound will increase or decrease in volume depending on the speed setting of your fan speed control.

Burner Tray:
The burner tray is positioned directly under the burner tube(s) and logs and is made of a different gauge material from the rest of the firebox and body. Therefore, the varying thicknesses of steel will expand and contract at slightly different rates which can cause “ticking” and “cracking” sounds. You should also be aware that as there are temperature changes within the unit these sounds will likely re-occur. Again, this is normal for steel fireboxes.

Blower Thermodisc: When this thermally activated switch turns ON it will create a small “clicking” sound. This is the switch contacts closing and is normal.

Pilot Flame: While the pilot flame is on it can make a very slight “whisper” sound.

Gas Control Valve: As the gas control valve turns ON and OFF, a dull clicking sound may be audible, this is normal operation of a gas regulator or valve.

Unit Body/Firebox: Different types and thicknesses of steel will expand and contract at different rates resulting in some “cracking” and “ticking” sounds will be heard throughout the cycling process.
MAINTENANCE

INSTRUCTIONS

1) Always turn off the gas valve before cleaning. For relighting, refer to lighting instructions. Keep the burner and control compartment clean by brushing and vacuuming at least once a year. When cleaning the logs, use a soft clean paint brush as the logs are fragile and easily damaged.

2) Clean appliance and door with a damp cloth (never when unit is hot). Never use an abrasive cleaner. The glass should be cleaned with a gas fireplace glass cleaner. The glass should be cleaned when it starts looking cloudy.

3) The heater is finished in a heat resistant paint and should only be refinished with heat resistant paint. Excalibur uses Stove-Bright Paint - Metallic Black #6309.

4) Make a periodic check of burner for proper position and condition. Visually check the flame of the burner periodically, making sure the flames are steady; not lifting or floating. If there is a problem, call a qualified service person.

5) The appliance and venting system must be inspected before use, and at least annually, by a qualified field service person, to ensure that the flow of combustion and ventilation air is not obstructed.

Note: Never operate the appliance without the glass properly secured in place.

6) Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the system being exposed to cold weather.

7) In the event this appliance has been serviced, check that the vent-air system has been properly resealed & reinstalled in accordance with the manufacturer’s instructions.

8) Verify operation after servicing.

General Vent Maintenance

Conduct an inspection of the venting system semi-annually. Recommended areas to inspect as follows:

1) Check the Venting System for corrosion in areas that are exposed to the elements. These will appear as rust spots or streaks, and in extreme cases, holes. These components should be replaced immediately.

2) Remove the Cap, and shine a flashlight down the Vent. Remove any bird nests, or other foreign material.

3) Check for evidences of excessive condensation, such as water droplets forming in the inner liner, and subsequently dripping out the joints. Continuous condensation can cause corrosion of caps, pipe, and fittings. It may be caused by having excessive lateral runs, too many elbows, and exterior portions of the system being exposed to cold weather.

4) Inspect joints, to verify that no pipe sections or fittings have been disturbed, and consequently loosened. Also check mechanical supports such as Wall Straps, or plumbers’ tape for rigidity.

GOLD-PLATED DOOR OR FACADE

The 24 carat gold-plated finish on the facade and door requires little maintenance, and need only be cleaned with a damp cloth.

DO NOT use abrasive materials or chemical cleaners, as they may harm the finish and void the warranty. Clean any fingerprints off before turning the unit on.

LOG REPLACEMENT

The unit should never be used with broken logs. Turn off the gas valve and allow the unit to cool before opening door and carefully remove the logs. (The pilot light generates enough heat to burn someone.) If for any reason a log should need replacement, you must use the proper replacement log. The position of these logs must be as shown in the diagrams under Log Installation.

Note: Improper positioning of logs may create carbon build-up and will severely alter the unit’s performance which is not covered under warranty.

THERMOCOUPLE/ THERMOPILE

1) Open the bottom louvers.

2) Loosen the thermocouple or thermopile with a 7/16” wrench.

3) Disconnect thermocouple by loosening nut from the valve with a 9mm wrench. Disconnect thermopile by loosening 2 screws marked TP on the valve.

4) Drop the thermocouple or thermopile down from the bracket and pull it out of the unit.

5) Reinstall the new ones in reverse order.

GLASS GASKET

If the glass gasket requires replacement use a tadpole glass gasket (Part # 936-155).

DOOR GLASS

Your Excalibur fireplace is supplied with high temperature, 5 mm Neoceram ceramic glass that will withstand the highest heat that your unit will produce. If your glass requires cleaning, we recommend using an approved glass cleaner available at all authorized dealers. Do not use abrasive materials. Do not clean the glass when hot.

In the event that you break your glass by impact, purchase your replacement from an authorized Excalibur dealer only, and follow our step-by-step instructions for replacement.

WARNING: Do not operate the appliance with the glass panels removed, cracked or broken. Replacement of the glass panels should be done by a licensed or qualified service person.

Caution: Wear gloves when removing damaged or broken glass.

Glass Replacement

Remove the glass door front. Remove the 4 glass clips from each corner. Slide in the new replacement glass. Push the 4 glass clips back onto the frame. The glass must have gasketing around it.
**FAN MAINTENANCE**

Unit must be grounded at all times. Do not cut the ground terminal off under any circumstances.

**To Install the Fan**

1) Shut the power off.

2) Open the bottom louver. Loosen the 2 screws holding the Burner ON/OFF switch and bracket to the bottom louver and lift the assembly out.

3) Remove the bottom louver by loosening the 2 hinge screws.

**IMPORTANT:** There are 2 fans in this fireplace. Fan A (the right side fan) and Fan B (the left side fan) are linked by a wire harness. Please do not remove the wire harness when installing the fans.

4) Move both fans and the wire harness together to the front of the fireplace.

5) Insert Fan A in from the left sideways (see diagram below). The easiest way to insert Fan A is to put Fan B in front of the louver opening. This ensures that there is sufficient length of wire between the 2 fans.

6) Take Fan A to the back above the mounting studs. Then flip the fan and position it onto the mounting studs.

7) Connect the ground wire from Fan A to the Grounding Lug located on the left hand side. See diagram 1.

8) Insert Fan B in from the front and position it on top of the mounting studs on the left side.

9) Connect the fan ground wire of Fan B and the power cord ground wire to the grounding lug. Refer to the wiring diagram.

10) Slide the thermodisc/cover assembly into the bracket clip on the underside of the firebox. Check that no wire will touch the hot surfaces. Diagram 2.

11) Attach the two control boxes to the bottom unit base and tighten the 2 screws on the left side and 1 screw on the right side.

12) Secure the fan wires and power cord by attaching one of the adhesive backed wire holder clips (Part #910-199) onto the fireplace base. Use the second clip to bundle up the wires approximately 4" from the control box. Ensure that there is no interference with the wires when the louver is closed and that no wire will touch the hot metal surfaces, fan blades or sharp edges.

13) Plug the fan power cord into the rear end of the receptacle box to provide the maximum clearance from the louvers.

**To Remove the Fan**

1) Shut the power off.

2) Reverse the installation instructions.

**Note:** The bearings are lubricated for life. Do not lubricate them. Make sure you vacuum the fan area on a regular basis.

**IMPORTANT:**

These fans collect a lot of dust from within your home. Ensure you maintain these fan motors on a regular basis by vacuuming out the fan blades and housing using a soft brush nozzle.
### REMOVING VALVE

1) Shut the power off.

2) Open the bottom louver door. Loosen the 2 screws holding the Burner ON/OFF switch and bracket to the bottom louver and lift the assembly out.

3) Remove the facade if installed.

4) Remove the glass door.

5) Remove the logs.

6) Remove the burner/grate assembly, first by removing the 2 screws, 1 on each side of the grill, then lift out the grill.

9) Remove the front bottom brick panel by sliding it out. Then remove the back bottom brick panel by tilting it slightly up and then out. The brick panel is very fragile - handle with care.

7) Remove the 2 screws, 1 on each side of the burner. Slide the burner to the left and then lift out.

8) Remove the rear log stand by removing the 2 screws.

Hint: If you are using black pipe, ensure that there is a union by the valve, otherwise removal will be almost impossible.

### INSTALLING VALVE

1) Attach the valve to the valve bracket with the 4 (m5x8 metric) screws provided.

2) Reconnect the "gas out" flare fitting with an 11/16" wrench.

3) Reconnect the "gas out" flare nut with a 13/16" wrench.

4) Install piezo ignitor push button assembly and reconnect wire.

5) Reconnect the quick drop out thermocouple nut with a 9mm wrench.

6) Reconnect the pilot tube nut with a 7/16" wrench.

7) Scrape off the old gasket from the floor of the firebox and from the valve tray assembly.

8) Install a new gasket and reinstall the valve tray assembly.

Note: Failure to install a new gasket may severely affect the appliance performance.

9) Reinstall the 10 hold down screws.

10) Hook up the 2 TP and 2 TH wires to the appropriate connections on the valve.

11) Reinstall the bottom brick panel, then screw the 2 screws & sleeves through the brick panel to the firebox base (reversing step 8) leaving them about 1/4" (6mm) above the brick panel. Reinstall the rear log stand.

12) Install Burner/grate assembly

13) Hook up the gas line and check for gas leaks with a soap and water solution or a gas leak detector. (Do not use open flame for leak testing.)

14) Fire up the unit temporarily

15) Check the manifold pressure.

16) Reinstall the logs and brick panels as needed.

17) Reinstall the glass door and the facade.

18) Fire up the unit again and check for proper flame appearance and glow on logs.

*Not available as a replacement part.*
Excalibur Fireplace Products are designed with reliability and simplicity in mind. In addition, our internal Quality Assurance Team carefully inspects each unit thoroughly before it leaves our facility. FPI Fireplace Products International Ltd. is pleased to extend this limited lifetime warranty to the original purchaser of a Excalibur Product.

The Warranty: Limited Lifetime
The combustion chamber, heat exchanger, burner tubes/pans, logs, embers and all gold plating (against defective manufacture only) are covered under the Limited Lifetime Warranty for five (5) years for parts and subsidized labour* and parts only thereafter.

Glass is covered for lifetime against thermal breakage only, parts and subsidized labour* for three (3) years and parts only thereafter from date of purchase.

Electrical and mechanical components such as blowers, switches, wiring, thermodiscs, FPI remote controls, spill switches, thermopiles, thermocouples, pilot assembly components, and gas valves are covered for one year parts and subsidized labour* from the date of purchase. Blowers and valves replaced under warranty are considered repairs and continue as if new with appliance. ie. twelve (12) months from original purchase date of appliance with a minimum of three (3) months coverage from date of replacement.

FPI venting components are covered parts and subsidized labour* for three (3) years from date of installation and parts only thereafter.

Conditions:
Any part or parts of this unit which in our judgement show evidence of such defects will be repaired or replaced at FPI's option, through an accredited distributor or agent provided that the defective part be returned to the distributor or agent Transportation Prepaid, if requested.

It is the general practice of FPI to charge for larger, higher priced replacement parts and issue credit once the replaced component has been returned to FPI and evaluated for manufacturer defect.

The authorized selling dealer is responsible for all in-field service work carried out on your Excalibur product. FPI will not be liable for results or costs of workmanship from unauthorized service persons or dealers.

At all times FPI reserves the right to inspect product in the field which is claimed to be defective.

All claims must be submitted to FPI by authorized selling dealers. It is essential that all submitted claims provide all of the necessary information including customer name, purchase date, serial #, type of unit, problem, and part or parts requested, without this information the warranty will be invalid.

Exclusions:
This limited Lifetime Warranty does not extend to or include paint, door or glass gasketing or trim.

At no time will FPI be liable for any consequential damages which exceed the purchase price of the unit. FPI has no obligation to enhance or modify any unit once manufactured. ie. as products evolve, field modifications or upgrades will not be performed.

FPI will not be liable for travel costs for service work.

Installation and environmental problems are not the responsibility of the manufacturer and therefore are not covered under the terms of this warranty policy.

Refractory liners, gaskets, door handles, paint are not covered under the terms of this warranty policy.

Any unit which shows signs of neglect or misuse is not covered under the terms of this warranty policy.

The warranty will not extend to any part which has been tampered with or altered in any way, or in our judgment has been subject to misuse, improper installation, negligence or accident, spillage or downdrafts caused by environmental or geographical conditions, inadequate ventilation, excessive offsets, negative air pressure caused by mechanical systems such as furnaces, fans, clothes dryer, etc.

Freight damage to stoves and replacement parts is not covered by warranty and is subject to a claim against the freight carrier by the dealer.

FPI will not be liable for acts of God, or acts of terrorism, which cause malfunction of the appliance.

Performance problems due to operator error will not be covered by this warranty policy.

Products made or provided by other manufacturers and used in conjunction with the operation of this appliance without prior authorization from Excalibur, may nullify your warranty on this product.

Simpson Dura-Vent venting components are covered by Simpson Dura-Vent Inc. warranty.

* Subsidy according to job scale as predetermined by FPI.
Excalibur fireplace products are designed with reliability and simplicity in mind. In addition, our internal Quality Assurance Team carefully inspects each unit thoroughly before it leaves our door.

FPI Fireplace Products International Ltd. is pleased to extend this Limited Lifetime Warranty to the original purchaser of a Excalibur Product.
