Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

WHAT TO DO IF YOU SMELL GAS

• Do not try to light any appliance.
• Do not touch any electrical switch: do not use any phone in your building.
  Leave the building immediately.
• Immediately call your gas supplier from a neighbour's phone. Follow the gas supplier's instructions.
• If you cannot reach your gas supplier, call the fire department.

Installation and service must be performed by a qualified installer, service agency or the gas supplier.

**Warning**
Fire or Explosion Hazard
Failure to follow safety warnings exactly could result in serious injury, death, or property damage.

Certified to/Certifié pour: ANSI Z21.88-2017

**Installer:** Please complete the details on the back cover and leave this manual with the homeowner.

**Homeowner:** Please keep these instructions for future reference.
To the New Owner:

Congratulations!
You are the owner of a state-of-the-art Gas Fireplace by REGENCY®. The Grandview™ G800C has been designed to provide you with all the warmth and charm of a wood fireplace at the flick of a switch. The Grandview™ G800C has been approved by Intertek for both safety and efficiency. As it also bears our own mark, it promises to provide you with economy, comfort and security for many trouble free years to follow. Please take a moment now to acquaint yourself with these instructions and the many features of your Regency® Fireplace.

DANGER

HOT GLASS WILL CAUSE BURNS
DO NOT TOUCH GLASS UNTIL COOLED
NEVER ALLOW CHILDREN TO TOUCH GLASS

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and shall be installed for the protection of children and other at risk individuals.

CAUTION:
HOT WHILE IN OPERATION. DO NOT TOUCH. SEVERE BURNS MAY RESULT. KEEP CHILDREN, CLOTHING, FURNITURE, GASOLINE, AND ANY LIQUIDS WITH FLAMMABLE VAPOURS AWAY.

KEEP BURNER AND CONTROL COMPARTMENT CLEAN. SEE INSTALLATION AND OPERATING INSTRUCTIONS ACCOMPANYING APPLIANCE.
MANUFACTURED MOBILE HOME REQUIREMENTS
INFORMATION FOR MOBILE/MANUFACTURED HOMES AFTER FIRST SALE

This Regency® product has been tested and listed by Intertek as a Direct Vent Wall Furnace to the following standards: Vented Gas Fireplace Heaters ANSI Z21.88-2017.

This Direct Vent System Appliance must be installed in accordance with the manufacturer's installation instructions and the Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280, or the current Standard of Fire Safety Criteria for Manufactured Home Installations, Sites, and Communities ANSI/NFPA 501A.

This appliance installation must comply with the manufacturer's installation instructions and local codes, if any. In the absence of local codes follow the current National Fuel Gas Code, ANSI Z223.1 and the current National Electrical Code ANSI/NFPA 70 in the U.S.A.

This appliance comes equipped with a dedicated #8 Ground Lug for attachment of the ground wire to the steel chassis as applicable to local codes.

The appliance, when installed, must be electrically grounded in accordance with local codes or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70.

This appliance may only be installed in an aftermarket permanently located, manufactured (U.S.A only) or mobile home, where not prohibited by local codes.

This appliance can only be used with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases.

Ensure that structural members are not cut or weakened during installation.

We recommend that our products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) or in Canada by Wood Energy Technical Training (WETT).

This appliance may be installed in an aftermarket permanently located, manufactured (U.S.A. only) or mobile home, where not prohibited by local codes.

This appliance is only for use with the type of gas indicated on the rating plate. A conversion kit is supplied with the appliance.
WARNING
CARBON MONOXIDE POISONING HAZARD

Failure to follow the steps outlined below for each appliance connected to the venting system being placed into operation could result in carbon monoxide poisoning or death. The following steps shall be followed for each appliance connected to the venting system being placed into operation, while all other appliances connected to the venting system are not in operation:

1. Seal any unused openings in the venting system.
2. Inspect the venting system for proper size and horizontal pitch, as required in the National Fuel Gas Code, ANSI Z223.1/NFPA 54.1 and these instructions. Determine that there is no blockage or restriction, leakage, corrosion and other deficiencies which could cause an unsafe condition.
3. As far as practical, close all building doors and windows and all doors between the space in which the appliance(s) connected to the venting system are located and other spaces of the building.
5. Turn on clothes dryers and any appliance not connected to the venting system. Turn on any exhaust fans, such as range hoods and bathroom exhausts, so they are operating at maximum speed. Do not operate a summer exhaust fan.
6. Follow the lighting instructions. Place the appliance being inspected into operation. Adjust the thermostat so appliance is operating continuously.
7. Test for spillage from draft hood equipped appliances at the draft hood relief opening after 5 minutes of main burner operation. Use the flame of a match or candle.
8. If improper venting is observed during any of the above tests, the venting system must be corrected in accordance with National Fuel Gas Code, ANSI Z223.1/NFPA.
9. After it has been determined that each appliance connected to the venting system properly vents when tested as outlined above, return doors, windows, exhaust fans, fireplace damper and any other gas-fired burning appliance to the previous conditions of use.

Other considerations:

Non-metallic venting systems shall not interchange components with another listed or unlisted metallic venting system.

- DO NOT REMOVE DECAL FROM UNIT.
- DO NOT REMOVE THIS INSTRUCTION PLATE / NE PAS ENLEVER CETTE ÉTIQUETTE INSTRUMENTATION ELECTRIQUE 115VAC, 1.5A, 60HZ.
- FPI Fireplace Products International Ltd. Delta, BC, Canada

**For the State of Massachusetts, installation and repair must be done by a plumber or gas fitter licensed in the Commonwealth of Massachusetts.**

**For the State of Massachusetts, flexible connectors shall not exceed 36 inches in length.**

**For the State of Massachusetts, the appliances individual manual shut-off must be a t-handle type valve.**

The State of Massachusetts requires the installation of a carbon monoxide alarm in accordance with NFPA 720 and a CO alarm with battery back up in the same room where the gas appliance is installed.

**DECAL LOCATION**

- DO NOT REMOVE DECAL FROM UNIT.
- Remove bottom cover—decal will be on the floor of the unit.
MA Code - CO Detector
(for the State of Massachusetts only)

5.08: Modifications to NFPA-54, Chapter 10

(2) Revise 10.8.3 by adding the following additional requirements:

(a) For all side wall horizontally vented gas fueled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes, including those owned or operated by the Commonwealth and where the side wall exhaust vent termination is less than seven (7) feet above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied:

1. INSTALLATION OF CARBON MONOXIDE DETECTORS. At the time of installation of the side wall horizontal vented gas fueled equipment, the installing plumber or gasfitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed. In addition, the installing plumber or gasfitter shall observe that a battery operated or hard wired carbon monoxide detector with an alarm is installed on each additional level of the dwelling, building or structure served by the side wall horizontal vented gas fueled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard wired carbon monoxide detectors.

a. In the event that the side wall horizontally vented gas fueled equipment is installed in a crawl space or an attic, the hard wired carbon monoxide detector with alarm and battery back-up may be installed on the next adjacent floor level.

b. In the event that the requirements of this subdivision can not be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.

2. APPROVED CARBON MONOXIDE DETECTORS. Each carbon monoxide detector as required in accordance with the above provisions shall comply with NFPA 720 and be ANSI/UL 2034 listed and IAS certified.

3. SIGNAGE. A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print size no less than one-half (1/2) inch in size, "GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL OBSTRUCTIONS".

4. INSPECTION. The state or local gas inspector of the side wall horizontally vented gas fueled equipment shall not approve the installation unless, upon inspection, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CMR 5.08(2)(a)1 through 4.

(b) EXEMPTIONS: The following equipment is exempt from 248 CMR 5.08(2)(a)1 through 4:

1. The equipment listed in Chapter 10 entitled "Equipment Not Required To Be Vented" in the most current edition of NFPA 54 as adopted by the Board; and

2. Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

(c) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM PROVIDED. When the manufacturer of Product Approved side wall horizontally vented gas equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for installation of the equipment and the venting system shall include:

1. Detailed instructions for the installation of the venting system design or the venting system components; and

2. A complete parts list for the venting system design or venting system.

(d) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM NOT PROVIDED. When the manufacturer of a Product Approved side wall horizontally vented gas fueled equipment does not provide the parts for venting the flue gases, but identifies "special venting systems", the following requirements shall be satisfied by the manufacturer:

1. The referenced "special venting system" instructions shall be included with the appliance or equipment installation instructions; and

2. The "special venting systems" shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

(e) A copy of all installation instructions for all Product Approved side wall horizontally vented gas fueled equipment, all venting instructions, all parts lists for venting instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation.
ALL PICTURES / DIAGRAMS SHOWN THROUGHOUT THIS MANUAL ARE FOR ILLUSTRATION PURPOSES ONLY. ACTUAL PRODUCT MAY VARY DUE TO PRODUCT ENHANCEMENTS.
Before You Start

Safe installation and operation of this appliance requires common sense, however, we are required by the ANSI Standards to make you aware of the following:

**INSTALLATION AND REPAIR SHOULD BE DONE BY AN AUTHORIZED SERVICE PERSON. THE APPLIANCE SHOULD BE INSPECTED BEFORE USE AND AT LEAST ANNUALLY BY A PROFESSIONAL SERVICE PERSON. MORE FREQUENT CLEANING MAY BE REQUIRED DUE TO EXCESSIVE LINT FROM CARPETING, BEDDING MATERIAL, ETC. IT IS IMPERATIVE THAT CONTROL COMPARTMENTS, BURNERS AND CIRCULATING AIR PASSAGEWAYS OF THE APPLIANCE BE KEPT CLEAN.**

**DUE TO HIGH TEMPERATURES, THE APPLIANCE SHOULD BE LOCATED OUT OF TRAFFIC AND AWAY FROM FURNITURE AND DRAPERIES.**

**WARNING: FAILURE TO INSTALL THIS APPLIANCE CORRECTLY WILL VOID YOUR WARRANTY AND MAY CAUSE A SERIOUS HOUSE FIRE.**

**CHILDREN AND ADULTS SHOULD BE ALERTED TO THE HAZARDS OF HIGH SURFACE TEMPERATURES, ESPECIALLY THE FIREPLACE GLASS, AND SHOULD STAY AWAY TO AVOID BURNS OR CLOTHING IGNITION.**

**YOUNG CHILDREN SHOULD BE CAREFULLY SUPERVISED WHEN THEY ARE IN THE SAME AREA AS THE APPLIANCE. TODDLERS, YOUNG CHILDREN AND OTHERS MAY BE SUSCEPTIBLE TO ACCIDENTAL CONTACT BURNS. A PHYSICAL BARRIER IS RECOMMENDED IF THERE ARE AT RISK INDIVIDUALS IN THE HOUSE. TO RESTRICT ACCESS TO A FIREPLACE OR STOVE, INSTALL AN ADJUSTABLE SAFETY GATE TO KEEP TODDLERS, YOUNG CHILDREN AND OTHER AT RISK INDIVIDUALS OUT OF THE ROOM AND AWAY FROM HOT SURFACES.**

**CLOTHING OR OTHER FLAMMABLE MATERIAL SHOULD NOT BE PLACED ON OR NEAR THE APPLIANCE.**

**A BARRIER DESIGNED TO REDUCE THE RISK OF BURNS FROM THE HOT VIEWING GLASS IS PROVIDED WITH THIS APPLIANCE AND SHALL BE INSTALLED FOR THE PROTECTION OF CHILDREN AND OTHER AT-RISK INDIVIDUALS**

**ANY SAFETY SCREEN, GUARD, OR BARRIER REMOVED FOR SERVICING THE APPLIANCE, MUST BE REPLACED PRIOR TO OPERATING THE APPLIANCE.**

**IF THE BARRIER BECOMES DAMAGED, THE BARRIER SHALL BE REPLACED WITH THE MANUFACTURER’S BARRIER FOR THIS APPLIANCE.**

**WARNING: Cancer and Reproductive Harm**

*Grandview® G800C Gas Fireplace | 9*
**Important Message**

**Save These Instructions**

The G800C Direct Vent Fireplace must be installed in accordance with these instructions. Carefully read all the instructions in this manual first. Consult the "authority having jurisdiction" to determine the need for a permit prior to starting the installation. It is the responsibility of the installer to ensure this fireplace is installed in compliance with manufacturer's instructions and all applicable codes.

**General Safety Information**

1. The appliance installation must conform with local codes or, in the absence of local codes, with the current National Gas Codes or ANSI Z223.1 Installation Codes.
2. The appliance when installed, must be electrically grounded in accordance with local codes, or in the absence of local codes with the current National Electrical Code, ANSI/NFPA 70.
3. See general construction and assembly instructions. The appliance and vent should be enclosed.
4. This appliance must be connected to the specified vent and termination cap to the outside of the building envelope. Never vent to another room or inside a building. Make sure that the vent is fitted as per Venting instructions.
5. Inspect the venting system annually for blockage and any signs of deterioration.
6. Venting terminals shall not be recessed into a wall or siding.
7. Any safety glass removed for servicing must be replaced prior to operating the appliance.
8. To prevent injury, do not allow anyone who is unfamiliar with the operation to use the fireplace.
9. Wear gloves and safety glasses for protection while doing required maintenance.
10. Be aware of electrical wiring locations in walls and ceilings when cutting holes for termination.
11. Under no circumstances should this appliance be modified. Parts that have to be removed for servicing should be replaced prior to operating this appliance.
12. Installation and any repairs to this appliance should be done by a qualified service person. A professional service person should be called to inspect this appliance annually. Make it a practice to have all of your gas appliances checked annually.
13. Do not slam shut or strike the glass door.
14. Under no circumstances should any solid fuels (wood, paper, cardboard, coal, etc.) be used in this appliance.
15. The appliance area must be kept clear and free of combustible materials, (gases and other flammable vapours and liquids).

**CAUTION:** Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing.

**To Turn Appliance On/Off**

1. Ensure pilot is lit. This appliance will not operate if the pilot is not lit. Follow the lighting instructions in manual to light pilot.
2. Locate the on/off switch located at the bottom right hand corner of the appliance.
3. Flick the switch to turn on or off the appliance.

**Optional Fan Operation**

1. If the optional fan has been installed, the speed of the fan can be controlled by using the controller.
2. To control the speed of the fan, locate the fan speed controller located either on the underside of the firebox marked FAN with a dial and or the wall.

If installed on the underside of the firebox, the screen will need to be removed. See instructions in this manual. If wall mounted simply use the dial to control the speed of the fan.

Note: The fan may take 15-30 minutes to turn on as this appliance has a fan thermo disc. If the fan speed controller is turned to the ON position, the fan will turn on automatically when heated and turn OFF automatically when cooled down.
Lighting the Pilot Using the Gas Control Knob Extender

1. Remove the knob extender from its cradle located on the firebox floor in front of the gas valve. See below.

2. Slide the extender knob over the pilot/on/off knob located on the gas valve. See below.

3. Follow instructions on how to light the pilot in this manual or the lighting plate located on the underside of the unit.

4. Once the pilot is lit, remove the extender knob and put it back into the cradle for future use.
Operating Procedure for Optional Remote Control

Functionality of the Receiver

The receiver is supplied by four AA batteries (see Fig. 3). The receiver accepts commands via radio signals sent from the transmitter. The receiver sends commands by the wire harness to the multifunctional gas control. When the system is turned on, an acoustic signal (beep) is generated to indicate that the receiver is ready to receive commands from the remote control.

Functionality of the Remote Control

When the batteries are installed into the remote control and the side slider is in the position shown in Fig. 5 below, the LED on the transmitter illuminates each time the ON/OFF button is pressed.

Communication Between the Remote Control and the Receiver

To program the transmitter to the receiver, move the receiver’s three-position slider to the REMOTE position (see Figure 2 below) and press the ON/OFF key of the transmitter.

Turn on the Appliance

When the ON/OFF key is pressed, the LED on the transmitter illuminates and the remote control is switched on. At the same time, the receiver connects the thermopile to the gas valve millivolt coil and the appliance main burner turns on in the high position. A single acoustic signal from the receiver confirms the reception of the command.

Low Battery Detection (Transmitter)

The duration of the remote control batteries depends on many factors: the quality of the batteries used, the number of ignitions of the appliance, etc. If the transmitter batteries are low, the light intensity of the LED (see Fig. 5) will decrease when you press the ON/OFF key to alert you to this condition. As soon as the depleted batteries are replaced, the transmitter will restart.

Low Battery Detection (Receiver)

The duration of the remote control batteries depends on many factors: the quality of the batteries used, the number of ignitions of the appliance, etc. If the receiver batteries are low, a triple acoustic signal is emitted by the receiver when it receives a command from the transmitter. This is an alert of a low battery condition before battery power is lost altogether. As soon as the depleted batteries are replaced, the acoustic signal from the receiver confirms the reception of the ON/OFF command from the transmitter.

Child Safety Lockout

With this function it is possible to deactivate the remote control key (see Fig. 6).

Backup Function

If the batteries of the receiver are low, the appliance can be switched on manually by moving the three-position sliderswitch on the receiver to the ON position (see Fig. 3).

Warnings and Cautions

**WARNING**

Fire hazard. Can cause severe injury or death.

The receiver causes the ignition of the fireplace. The fireplace can turn on suddenly. Keep away from the burner, especially when operating the BACKUP switch.

**CAUTION**

Property damage hazard. Excessive heat can cause property damage.

The fireplace can stay ignited for many hours. Take care to turn off the fireplace if it is unattended by adults. Do not leave the remote control where children can reach it.
Safety Screen removal

1. Slide screen up.

2. Slide screen right.

3. Lower screen down.

4. Swing screen outwards while keeping the screen level and remove.

Safety screen Installation

1. To install the safety screen—Reverse steps above.

Glass Door Removal

1. To remove the glass door - place both hands on either side of the latch. Pull forward then up to unlock, repeat on opposite side.

**Important:** After releasing the latches, support the weight of the door.

2. With both latches released, support the door with both hands and tilt out to approximately a 60 degree angle.

3. Lift the door up and out of lower slots to remove.

Glass door Installation

1. To install the door—Reverse steps above.
installer's information

Installation Checklist

1. Locate appliance
   a) Room location (Refer to "Locating Your Gas fireplace" section)
   b) Clearances to Combustibles (Refer to "Clearances" section)
   c) Mantle Clearances (Refer to "Combustible Mantle Clearances" section)
   d) Framing & Finishing Requirements (Refer to "Framing & Finishing" section)
   e) Venting Requirements (Refer to "Venting" section)

2. Assemble Top Standoffs and Top Facing Support and Side Nailing Strips (Refer to "Unit Assembly Prior to Installation" Section). NOTE: Must be done before installing unit into place.

IMPORTANT: If installing the fan kit or changing this from rear vent to top vent, this must be completed prior to installing the appliance into the framed opening.

3. Install vent (Refer to "Venting" sections).

4. Make gas connections. Test the pilot. Must be as per Diagram (Refer to "Pilot Adjustment" section).
   Convert to propane if desired (Refer to "Gas Line Installation" and "Conversion Kit from NG to LPG" sections).

5. Make electrical connections to receptacle supplied with unit (recommended).

6. Install standard and optional features. Refer to the following sections:
   a. Standard Glass Door
   b. Rear to top vent conversion
   c. Coolwall conversion
   d. Fan Installation (Optional)
   e. Nailing flange installation
   f. Electrical access/120 volt power installation by others
   g. Wall Mount On/Off Switch + Receiver Installation
   h. Coolwall Clearances/Framing/Finishing
   i. Clean Front Clearance/ Framing/Finishing
   j. Outside Finish Clearance/ Framing/Finishing
   k. LP Conversion (optional)
   l. Inner Panels or Brick Panels (Must install one of the options)
   m. Media (Glass crystals)
   n. Log Set Installation
   o. HeatWave Kit

7. Final check.

4. This appliance is Listed for bedroom installations using the standard Remote (millivolt thermostat system). Some areas may have further requirements, check local codes before installation.

5. The G800C Gas Fireplace are approved for alcove installations, see "Clearances" section for details.

6. We recommend that you plan your installation on paper using exact measurements for clearances and floor protection before actually installing this appliance. Have an authorized inspector, dealer, or installer review your plans before installation.

Locating Your Gas Fireplace

1. When selecting a location for your fireplace, ensure that the clearances are met.

2. The appliance must be installed on a flat, solid, continuous surface. For example a wood, metal or concrete floor or in a raised (on the wall) application. The appliance must be installed on a metal or wood panel extending the full width and depth of the appliance.

3. The G800C Gas Fireplace can be installed in a recessed position or framed out into the room as in A, B, C and D. See Diagram 1.

HeatWave Duct System

Optional Kit #946-556

The HeatWave Air Duct Kit increases the effectiveness of your fireplace by dispersing warm air from the fireplace to remote locations in the same room or other rooms in your home.

Up to two kits may be installed on the fireplace.

Please Note: Only 1 HeatWave kit may be operated at one time. This includes the internal blower option as well.

The HeatWave Duct Kit has different clearance and framing requirements, check the HeatWave manual for details.
The G800C is designed to allow for unique installation options—depending on the desired finish. Please review the options and follow the specific clearance, framing, and finishing options for that application.

The applications are as follows:

**Cool Wall Installation-Clean Front & Outside Finish**: combustible materials can be installed right up to the fireplace opening with this option.

**Non Combustible Installation-Clean Front & Outside Finish Applications**: non-combustible required when installing materials right to the fireplace opening with this option.

See descriptive diagrams on the next page.

Note: The topics listed below can be found in the pages that follow.
Cool Wall Installation (Combustible Finishing)

Cool Wall Install:
- Vented chase
- Combustible material can be used all around the fireplace
- Combustible framing

Non-Combustible Installation

Standard Install:
- Non-vented chase
- Non-combustible board required
- Combustible framing
Cool Wall installation/Cool Wall Conversion

1. Remove six (6) screws to remove top panel.

2. Remove insulation from top of unit and discard.

3. Slide out tab as shown to remove—recycle part.

4. Insert a large slotted screwdriver into the slot in between front and back tabs—bend the three (3) tabs up 90° towards the front. DO NOT REMOVE TABS

5. Bend the rear three (3) tabs up 90° towards the back of the unit.

6. Flip top panel 180° and reinstall to top of unit with four(4) screws in locations shown below.
Cool Wall Clearances

The clearances listed below are minimum distances unless otherwise stated:

A major cause of chimney related fires is failure to maintain required clearances (air space) to combustible materials. It is of the greatest importance that this fireplace and vent system be installed only in accordance with these instructions.

Caution Requirements

The top, back and sides of the fireplace are defined by standoffs. The metal ends of the standoff may **NOT** be recessed into combustible construction.

**WARNING**

Fire hazard is an extreme risk if these clearances (air space) to combustible materials are not adhered to. It is of greatest importance that this fireplace and vent system be installed only in accordance with these instructions.

---

<tr>
<td>L: Clearance to Sprinkler Head (Min.)</td>
<td>36” (914mm)</td>
<td>Perpendicular From Chase Grill</td>
</tr>
</tbody>
</table>

Notes:

**0”** No Hearth Required

**IMPORTANT** - *A minimum of 66 square inches of open area, not lower than 0”-2” from top of enclosure, required for all cool wall installations — this can be achieved by having an open area in front. See manual for details.  **An extra 3/4” (19mm) of manteel height is required when using a faceplate.*

---

**Heat Wave**

The **HeatWave** Duct Kit has different clearance and framing requirements, check the **HeatWave** manual for details.
Cool Wall Mantel Clearances

Due to the extreme heat this fireplace emits, the mantel clearances are critical. Combustible mantel clearances from top of front facing are shown in the diagram below.

Note: Ensure the paint that is used on the mantel and the facing is "High Quality" or the paint may discolour. Note: If Faceplate or Finishing Trim is being installed, leave 3 3/8" clearance from from top of fireplace opening for installation and removal.

Cool Wall Mantel Leg Clearances

See framing dimensions on next page.

</tbody>
</table>

*Important: Framing height requires consideration of the hearth height. Dimension N = N + the thickness of the installed hearth.

Note: The 2 standoffs at the rear of the appliance may be removed as these are not required in this application. Ensure that any screws that are removed are reinstalled. The 2 standoffs can be recycled/discarded.

![Diagram](image)

**IMPORTANT:** Corner applications are vented from the top only - rear venting cannot be used.
Chase Venting

Note: The enclosure opening cannot be any lower than 0-2" from the top of the enclosure for all installations. Minimum height of enclosure from base of appliance is 80".

A minimum 66 in² opening in the enclosure is required to maintain safe operating temperatures. This can be achieved in a number of ways including the examples shown below.

Warning: DO NOT cover or place objects in front of the air outlet(s).

Regency Chase Vent

Custom chase vent

Reveal at the chase top
Chase Vent Installation—Cool Wall

Framed Opening must be at least 2 3/8" tall, and at least 33 3/8" wide to accommodate the Chase vent. The top of the Chase vent opening must be 2" (51 mm) or less from the top of the chase enclosure. Fasten the Chase vent with screws and construction adhesive.

If the optional Regency chase vent is not being used, a minimum 66in² opening in the enclosure is required to maintain safe operating temperatures. This can be achieved in a number of ways including a reveal at the top of the chase.
Clean Front Installation (Non Cool Wall)—Clearances

The clearances listed below are minimum distances unless otherwise stated:

A major cause of chimney related fires is failure to maintain required clearances (air space) to combustible materials. It is of the greatest importance that this fireplace and vent system be installed only in accordance with these instructions.

**Caution Requirements**
The top, back and sides of the fireplace are defined by standoffs. The metal ends of the standoff may **NOT** be recessed into combustible construction.

**WARNING**
Fire hazard is an extreme risk if these clearances (air space) to combustible materials are not adhered to. It is of greatest importance that this fireplace and vent system be installed only in accordance with these instructions.

*Important: Framing height requires consideration of the hearth height. Dimension N = N + the thickness of the installed hearth.*

![Diagram of Gas Fireplace Framing Dimensions](image)

**IMPORTANT:** Corner applications are vented from the top only - rear venting cannot be used.
Clean Front Installation

The finishing material can be brought to the edge of the fireplace opening.

Do NOT finish beyond the opening, doing so will prevent the screen from being attached and removed.

The Optional Clean Front Trim (Part # 761-929) is available to prevent this from happening. See Section: CLEAN FRONT TRIM INSTALL INSTRUCTIONS for details.

Nailing Flange Instructions

1. Bend framing tabs 90° backward to create the framing standoff.

Optional Clean Front Trim Install Instructions (Part # 761-929)

1. Loosen the four (4) screws that attach the right and left nailing flanges to the unit.
2. Slide the left and right tiling flanges onto the front of the fireplace. Use the slots to center with the screw securing the Nailing Flanges.
3. Tighten screws down.
4. Slide the Bottom Tiling Flange against the bottom of the fireplace. Secure with a screw on each side.
5. Finishing material can now be pressed against the flat edge created by the Clean Front Trim.
Caution Requirements

The top, back and sides of the fireplace are defined by standoffs. The metal ends of the standoff may NOT be recessed into combustible construction.

WARNING

Fire hazard is an extreme risk if these clearances (air space) to combustible materials are not adhered to. It is of greatest importance that this fireplace and vent system be installed only in accordance with these instructions.

Outside Finish Installation (Non Cool Wall)—Clearances

The clearances listed below are minimum distances unless otherwise stated:

A major cause of chimney related fires is failure to maintain required clearances (air space) to combustible materials. It is of the greatest importance that this fireplace and vent system be installed only in accordance with these instructions.

*Important: Framing height requires consideration of the hearth height. Dimension N = N + the thickness of the installed hearth.*

**IMPORTANT:** Corner applications are vented from the top only - rear venting cannot be used.
Outside Finish—Finishing

Finishing Material may be brought to the top and side edges of the fireplace, as shown below.
Grandview® G800C Gas Fireplace

**Faceplate Install (Part # 761-922, 761-924, 761-926)**

**Faceplate - Finishing:**

The finishing material can be brought to the top of the fireplace. A 1/2" gap must be maintained on the sides to allow the Faceplate to be installed. The finishing material must not protrude past the front face of the fireplace. Follow the steps below to install.

See section: Nailing flange install for Nailing Flange Depth settings.

1. Bend the four mounting tabs on the outer box Front 90° forward. There are two tabs per side.

2. Bend the tabs on the left and right nailing flanges 90° forward. There are two tabs per nailing flange. These tabs are used to stop finishing material from interfering with the faceplate mounts.

---

**Mounting Tabs**

**Top and Side Nailing Flange Tabs**
Faceplate - Finishing:

A 1/2” gap must be maintained on the sides of the fireplace to allow the Face Plate to be installed and removed.

Do NOT finish past the front face of the fireplace.

Install the faceplate by resting the arms on the Face Plate on top of the mounting tabs.

Adjust left and right to center the Face Plate.

NOTE: Do not to touch the faceplate without clean, soft, gloves. Dirt or oils can be transferred onto the finish and become permanent.
The Finishing Trim can be installed to upgrade the look of the fireplace or to cover facing material edges.

1. Lay the parts on a soft surface painted side down.
2. Insert the tab on the left side into the slot on the top.
3. Fold the tabs down to secure.
4. Insert the tab on the top into the slot on the right.
5. Fold the tab down to secure.

See section: Nailing Flange Install for Nailing Flange Depth Settings.

**Finishing Trim Install Instructions:**
1. Bend the four tabs on the outer box front forward. There are two tabs per side. These tabs are the mounts for the faceplate or finishing trim.
2. Bend the two tabs on the top nailing flange down.
3. Bend the tabs on the left and right nailing flanges forward. There are two tabs per nailing flange.
Finishing Trim - Finishing:

A 1/2” gap must be maintained on the sides and top of the fireplace to allow the Finishing Trim to be installed and removed. The finishing trim has adjustment for material to protrude up to 1/4” past the front of the finishing trim.

Install the faceplate by resting the arms on the finishing trim on the top of the mounting tabs.

Adjust left and right to center the finishing trim.
installation

Unit Assembly Prior to Installation

After the framing has been built, the nailing Flanges will need to be set depending on the depth of finishing material being used. Up to 11/4” total material thickness can be used, including the backing material. The depth of finishing material can be adjusted in 1/4” increments.

1. Determine the required depth setting for the materials being used.
2. Once the setting has been chosen, install the Left and Right Nailing Flanges with 2 screws on each Flange.

Nailing Flange Parts

- Left Nailing Flange
- Right Nailing Flange
- Standoff Deflector
- Top Nailing Flange
- Front of Fireplace
Nailing Flange Installation

3. Screw one screw into the rear hole on each Side Nailing Flange.
4. Install the Top Nailing Flange with 4 screws.

5. Slot the Standoff Deflector onto the back screws, then secure the with a screw through the remaining front hole on each flange.
**Wall Board/Drywall Installation**

**WARNING!** Risk of Fire! Comply with all minimum clearances to combustibles as specified.

Finishing Instructions:
It is important to follow the framing and finishing instructions to ensure proper placement of fireplace into the surrounding framing/finishing materials. Wall board materials 1/2 in. thick are specified in this installation manual to properly align with the optional finishing methods offered with this appliance. The G800C may be finished to the appliance opening with 1/2 inch thick drywall or non combustible material depending on the application and requirements. The nailing flanges allow for adjustments of up to 1-1/4" thickness of material.

- Ensure that the back and side clearances are maintained.

**WARNING!** Risk of Fire! Maintain specified air space clearances to combustibles. Inadequate air space could cause overheating and fire.

The appliance is designed to be used with 1/2 in. wall sheathing materials such as drywall, plywood, wood composites, or non-combustible materials. Thicker materials may be used. Refer to facing and finishing details in this manual.

Facing Material
- Facing and/or finishing materials must never overhang into the glass opening.
- Facing materials may be combustible or non-combustible

**WARNING!** Risk of Fire! DO NOT apply combustible materials beyond the minimum clearances. Comply with all minimum clearances to combustibles as specified in this manual. Overlapping materials could ignite and will interfere with proper operation.

**PAINTING**
If desired finishing includes a painted wall, 100% acrylic latex, oil-based or standard acrylic paints may be used. Follow paint manufacturer's instructions for paint and primer application.
Conversion to Top Vent

Note: This conversion must be done prior to the unit being placed in position.

The unit comes equipped as a rear vent unit. These instructions are to be used, only if the unit is going to be top vented.

1. Remove six (6) screws in locations shown below to remove vent cover plate.

Diagram 1

2. Using a magnetic drill bit—remove the two (2) top screws and loosen two (2) bottom screws to remove outside collar from the back of the unit. See Diagram 3.

Diagram 3

3. Remove the four (4) top screws and loosen the two (2) bottom screws to remove in the inner collar from the back of the unit. See Diagram 3.

Note: Take care not to drop any screws into the unit.

Diagram 2 - Back of Unit

4. From the top of the unit—remove the top cover plate by removing the two (2) top screws and loosening the two (2) bottom screws. Slide cover plate up and off to remove.

Diagram 4 - Top of Unit

Important: Loosen bottom screws only and slide inner and outer collar up and off unit.

5. Remove the insulation from the top of the unit as shown and discard.

Diagram 5
6. Remove the Exhaust Cover Plate marked: DISCARD, and discard plate.  
7. Remove the four (4) top screws and loosen the two (2) bottom screws to remove in the inner cover plate from the top of the unit. 

8. Install the inner cover plate removed from the top in Step 7—to the back of the unit. Slide the plate onto the two (2) loosened screws and tighten all six (6) screws. 

9. Install the top cover plate (removed from the top in Step 4) to the back of the unit. Slide the plate onto the two (2) loosened screws and tighten all 4 screws. 

10. Install inner collar (removed from the back in Step 3) to the top. Slide collar onto loosened screws and tighten all six (6) additional screws. 

11. Install outer collar (removed from the back in Step 2) to top of unit. Slide collar onto two (2) loosened screws and tighten all four (4) additional screws. 

12. Reinstall vent cover plate (removed in Step 1) with six (6) screws.
Vent Restrictor Installation

1. Determine the venting configuration.

2. Go to venting arrangements section (in the manual) to determine if a vent restrictor setting is required. (If required, proceed to Step 3).

3. Loosen the two screws that secure the top heat deflector and remove top heat deflector (diagram 1).

4. Align the vent restrictor plate (found in the manual package) to the required vent restrictor position as per the Diagrams shown.

5. Once the vent restrictor plate is in the required position, secure with 2 - 1/4” x 1/2” screws. Ensure all screws are tight, but do not over tighten.

Venting Introduction

The G800C uses the “balanced flue” technology Co-Axial system. The inner liner vents products of combustion to the outside while the outer liner draws outside combustion air into the combustion chamber thereby eliminating the need to use heated room air for combustion and losing warm room air up the chimney.

**Note:** These flue pipes must not be connected to any other appliance.

The gas appliance and vent system must be vented directly to the outside of the building, and never be attached to a chimney serving a separate solid fuel or gas burning appliance. Each direct vent gas appliance must use its own separate vent system. Common vent systems are prohibited.

</table>

¹ In accordance with the current ANSI Z223.1/NFPA 54, National Fuel Gas Code

² A vent shall not terminate directly above a sidewalk or paved driveway which is located between two single family dwellings and serves both dwellings

³ Permitted only if veranda, porch, deck, or balcony is fully open on a minimum of two sides beneath the floor

4. Clearance in accordance with local installation codes and the requirements of the gas supplier

a 3 feet (91cm) within a height of 15 feet (4.5m) above the meter / regulator assembly

b 3 feet (91cm) above - if within 10 feet (3m) horizontally
### 4" X 6-5/8" Rigid Pipe Cross Reference Chart Only

Components from different Manufacturers may not be mixed. Not all Rigid Pipe components are available directly from Regency. Non-metallic venting systems shall not interchange components with another listed or unlisted metallic vent system.

**Note:** Olympia Ventis DV is only approved for certain models. See list of approved models in cross-reference chart.

---

**Note:** Horizontal runs of vent must be level, or have a 1/4" rise for every 1 foot of run towards the termination. Never allow the vent to run downward - this could cause high temperatures and may present a possible fire hazard.
**The Diagrams show all allowable combinations of vent runs with 4" x 6-5/8" venting using the Regency direct vent system or rigid vent system. A vent guard should be used whenever the termination is lower than the specified minimum or as per local codes.**

For horizontal terminations the Regency Direct Vent Flex System may be used for installations with a maximum **continuous** vent maximum horizontal length of 3ft (0.9m).

**Note:** Must use optional rigid pipe adaptor (Part # 510-994) when using **Rigid Pipe** vent systems.

- Maintain clearance to combustibles.
- Horizontal vent must be supported every 3 feet.
- Firestops are required at each floor level and whenever passing through a wall.

---

**Top Vented**

Set #1 (2" open) up to 2’ horizontal

*Factory Setting - no restrictor required greater than 2” horizontal*

**Rear Vented**

*Factory Setting - No Restrictor Required*
installa

Rigid Pipe Venting Systems
Horizontal or Vertical Terminations

The minimum components required for a basic horizontal termination are:

1 Horizontal Termination Cap
1 90° Elbow
1 Rigid Pipe Adaptor
1 Wall Thimble
1 Length of pipe to suit wall thickness
(see chart)

Wall thickness is measured from the back standoffs to the inside mounting surface of termination cap. For siding other than vinyl furring strips may be used, instead of the vinyl siding standoff, to create a level surface to mount the vent terminal. The Terminal must not be recessed into siding. Measure the wall thickness including furring strips.

If a Vinyl Siding Standoff is required (it must be used with vinyl siding), measure to outside surface of wall without siding and add 2 inches.

Warnings:
Do not combine venting components from different venting systems.
However use of the AstroCap™ and FPI Riser is acceptable with all systems.

This product has been evaluated by Intertek for using a Rigid Pipe Adaptor in conjunction with DuraVent Direct Vent, Selkirk Direct-Temp, Ameri Vent Direct venting, Olympia Ventis DV and Security Secure Vent systems. Use of these systems with the Rigid Pipe Adaptor is deemed acceptable and does not affect the Intertek WHI listing of components.

The FPI AstroCap™ and FPI Riser Vent terminal are certified for installations using FPI venting systems as well as Simpson Dura-Vent® Direct Vent, Ameri- can Metal Products, Olympia Ventis DV, Security Secure Vent®, AmeriVent Direct Vent. AstroCap™ is the proprietary trademark of FPI Fireplace Products International Ltd. Dura-Vent® and Direct Vent are registered and/or proprietary trademarks of Simpson Dura-Vent Co. Inc.
Venting Arrangements - Horizontal Termination
Rigid Pipe and FPI Direct Vent System (Flex)
(Propane & Natural Gas)

The diagram shows all allowable combinations of vertical runs with horizontal terminations, using one 90° elbow (two 45° elbows equal one 90° elbow).

Note: Must use optional rigid pipe adaptor (Part # 510-994) when using Rigid Pipe venting systems.

• Maintain clearances to combustibles.
• Horizontal vent must be supported every 3 feet.
• Firestops are required at each floor level and whenever passing through a wall.

Note: FPI Direct Vent Flex System Part #:946-513 (2 foot), 946-515 (4 foot) and 946-516 (10 foot) are only approved for horizontal terminations.
**Venting Arrangements Vertical Termination**

**Rigid Pipe System and Vertical Flex Kit to Same Limitations**

_(Propane & Natural Gas)_

The shaded area in the diagram shows all allowable combinations of straight vertical and offset to vertical terminations, using two 90° elbows, with rigid pipe vent systems for Propane and Natural Gas.

- Vent must be supported at offsets.
- Firestops are required at each floor level and whenever passing through a wall.
- Maintain clearances to combustibles.

**Note:** Must use optional rigid pipe adaptor when using rigid vent systems (Part # 510-994).

Please note min. 1 foot between 90° elbows is required.

Lengths do not include elbow indicated.
The appliance must not be connected to a chimney flue serving a separate solid fuel burning appliance.

This appliance is designed to be attached to two 3” (76mm) co-linear aluminum flex running the full length of the chimney. See the Venting Arrangements on next page for minimum and maximum heights.

**Required Parts:**

<table>
<thead>
<tr>

| 46dva-VCH| High Wind Cap                                                               |
| 46dva-GK | 3” Co-linear Adapter with flashing                                         |

**NOTE:**

See detailed venting arrangements, vertical terminations, co-linear flex system into masonry fireplaces in this manual.

Masonry chimneys may take various contours which the flexible liner will accommodate. However, keep the flexible liner as straight as possible, avoid unnecessary bending.

The Air Intake pipe must be attached to the inlet air collar of the termination cap.

Top exit only. Cannot be vented from the rear.
For both residential & manufactured homes

Important: As shown below, the unit can only be vented from the top, not from the rear.

Restrictor at Set #1 (2” open)
Install the vent system according to the manufacturer's instructions included with the components.

1. Set the unit in its desired location. Check to determine if wall studs or roof rafters are in the way when the venting system is attached. If this is the case, you may want to adjust the location of the unit. Rough in the gas preferably on the right side of the unit and the electrical (junction block is on the left side) on the left.

2. Direct Vent pipe and fittings are designed with special twist-lock connections to connect the venting system to the appliance flue outlet. A twist-lock appliance adaptor is an available option that must be used in conjunction with the Simpson Dura-Vent Direct Vent system.

3. Put a bead of Mill-Pac inside the outer section of the adapter and on the inner collar. Slip the adapter over the existing inner and outer flue collar and fasten to the outer collar only with the 3 supplied screws (drilling pilot holes will make this easier). Level the fireplace and fasten it to the framing using nails or screws through the nailing strips.

4. Assemble the desired combination of pipe and elbows to the appliance adaptor and twist-lock for a solid connection.

**Notes:**

a) Twist-lock procedure: Four indentations, located on the female ends of pipes and fittings, are designed to slide straight onto the male ends of adjacent pipes and fittings, by orienting the four pipe indentations so they match and slide in to the four entry slots on the male ends, Diagram 1. Push the pipe sections completely together, then twist-lock one section clockwise approximately one-quarter turn, until the two sections are fully locked. The female locking lugs will not be visible from the outside, on the Black Pipe or fittings. They may be located by examining the inside of the female ends.

6) The arrow on the vent cap should be pointing up. Insure that the 1-1/2" clearances to combustible materials are maintained (Diagram 4). Install the termination cap.

Below Grade Installation

If the Snorkel Termination must be installed below grade, i.e. basement application, proper drainage must be provided to prevent water from entering the Snorkel Termination. Refer to Diagram 4. Do not attempt to enclose the Snorkel within the wall, or any other type of enclosure.

**NOTE:** For best results and optimum performance with each approved venting system, it is highly recommended to apply "Mill-Pac" sealant (supplied) to every inner pipe connection. Failure to do so may result in drafting or performance issues not covered under warranty.
Diagram 3

The four wood screws provided should be replaced with appropriate fasteners for stucco, brick, concrete, or other types of sidings.

Note: If installing termination on a siding covered wall, a vinyl siding standoff or furring strips must be used to ensure that the termination is not recessed into the siding.

7. Before connecting the horizontal run of vent pipe to the vent termination, slide the Wall Thimble over the vent pipe.

8. Slide the appliance and vent assembly towards the wall carefully inserting the vent pipe into the vent cap assembly. It is important that the vent pipe extends into the vent cap sufficient distance so as to result in a minimum pipe overlap of 1-1/4" inches. Secure the connection between the vent pipe and the vent cap by attaching the two sheet metal strips extending from the vent cap assembly into the outer wall of the vent pipe. Use the two sheet metal screws provided to connect the strips to the pipe section. See Diagram 6.

9. Install wall thimble in the center of the 10" square and attach with wood screws (Diagram 7).
installation

A poor draft, or down drafting can result from high wind conditions near big trees or adjoining roof lines, in these cases, increasing the vent height may solve the problem.

7. Ensure vent is vertical and secure the base of the flashing to the roof with roofing rails, slide storm collar over the pipe section and seal with a mastic.

8. Install the vertical termination cap by twist-locking it.

Note: Any closets or storage spaces, which the vent passes through must be enclosed.

### Offset Chart

<td>768</td>
<td>47 3/4</td>
</tr>
</tbody>
</table>

Note: To make the installation more aesthetically pleasing, we recommend framing out a square to mount the terminal to.

### Direct Vent System (Flex) Installation Procedures

1. Locate the unit in the framing, rough in the gas (preferably on the right side of the unit) and the electrical (Junction block is on the left side) on the left. Locate the centerline of the termination and mark wall accordingly. Cut a 10"(254mm) hole in the wall (inside dimension).

Note: A 1-1/2"(38mm) clearance around the liner must be maintained except that only a 1" (25mm) clearance is needed at the termination end. We recommend framing a 10"(254mm) x 10"(254mm) (inside dimensions) hole to give structural rigidity for mounting the termination.

2. Level the fireplace and fasten it to the framing using nails or screws through the nailing strips.

3. Assemble the vent assembly by applying Mill Pac to the 4"(100mm) inner collar of the termination and slipping the 4"(100mm) liner over it at least 1-3/8" (35mm). Fasten with the 3 screws (drilling pilot holes will make this easier). Apply Mill Pac to the 6-7/8"(175mm) flex pipe and slip it over the 6-7/8" outer collar of the vent terminal at least 1-3/8"(35mm) and fasten with the 3 screws.

Note: Horizontal sections must be supported at intervals not exceeding 3 feet (0.9 meter). (Flame picture and performance will be affected by sags in the liner).

4. Separate the 2 halves of the wall thimble and secure the one with the tabs to the outside wall making sure that the tabs are on top and bottom. Fasten the other thimble half to the inside wall. The thimble halves slip inside each other and can be adjusted for 2 x 4 or 2 x 6 walls. The liners must slip over the collars a minimum of 1-3/8".

5. Slip the assembled liner and termination assembly through the thimble making sure the termination cap faces up (there are markings on the cap that show which way is up). This will position the termination cap with proper down slope for draining water. Fasten the cap to the outer wall with the 4 supplied screws.

6. Pull the centre 4"(100mm) liner and outer 6-7/8"(175mm) liner out enough to slip over the flue collars of the fireplace. (You may wish to cut the liner shorter to make it more workable.) Do not bend liner more than 90°.

7. Apply Mill Pac over the fireplace inner collar and slip the 4"(100mm) liner down over it and attach with 3 supplied screws.

8. Do the same with the 6-7/8"(175mm) liner.

9. Apply a bead of silicone between the thimble and termination and around the outer edge of the terminal at the wall in order to keep the water out.

IMPORTANT: Do not locate termination hood where excessive snow or ice build up may occur. Be sure to check vent termination area after snow falls, and clear to prevent accidental blockage of venting system. When using snow blowers, make sure snow is not directed towards vent termination area.
Vertical Termination 4’ x 6-7/8’ Venting - Vertical Flex Vent Kit (Part #946-755)

1. Maintain the 1-½” (38 mm) clearance (air space) to combustibles when passing through ceilings, walls, floors, enclosures, attic rafters or other nearby combustibles. Do not pack air spaces with insulation. Check Venting sections for the maximum vertical rise of the venting system and the maximum horizontal offset limitations. Ensure that you maintain clearances around enclosures, walls, below or above floors, floor joists, etc. Each appliance has different clearance requirements (top, sides, bottom). See specific appliance manual for details.

2. Set the appliance in its desired position. Drop a plumb bob down from the ceiling/floor joist to the position of the appliance flue exit and mark the location where the vent will penetrate the ceiling. Drill a small hole at this point. Next drop a plumb bob from the roof to the hole previously drilled at the ceiling level and mark the spot where the vent will penetrate the roof.

3. Cut a hole in the roof centered on the small hole placed in the roof in the previous steps. The hole should be a minimum of 10-½ (260 mm) inches. The hole may be round or square.

4. Slip the flashing under the shingles and line up flashing so it is centered to the hole (shingles should overlap half of the flashing) as per Diagram 1.

Diagram 1: The upper half of the flashing is installed under the roofing material and not nailed down until the chimney is installed. This allows for small adjustments.

5. A ceiling firestop/firestop spacer must be installed when passing through each floor or ceiling level. To install the ceiling firestop/firestop spacer in a flat ceiling or floor joist cut a 10-½ (260 mm) inch square hole. Frame the hole as shown in Diagram 1 and install the ceiling firestop. Slide the top attic insulation spacer onto the top of the attic insulation shield/firestop - See Diagram 1a. Secure with 4 screws/nails. If more than one is required, these can be purchased separately.

Note: The ceiling firestop/firestop spacer may be cut down to size if this shield is too high for the application.

Diagram 2: Firestop spacer to prevent debris from falling into the ceiling firestop

6. Determine the overall height of the chimney from the top of the appliance to the underside of the flashing. If required cut the flexible inner and outer pipe to the desired length up to a maximum of 20 feet (6.1 m).

7. Put a bead of Mill-Pac around the 4 inch (102 mm) collar on the appliance and slide the inner flex pipe over the inner collar of the appliance and secure with a minimum of 3 screws.

8. Install 4 inch spacers around 4 inch (102 mm) flex.

9. Repeat Step 7 to install the outer pipe to the outer collar of the appliance

Note: If an offset is necessary in the attic or floor joists it is important to support the vent pipe every 3 feet (0.91 m) to avoid excessive stress and sagging of the vent pipe. Wall straps are provided (3 in total) for this purpose. All round/plumbers strapping may also be used if further supports are required.

10. Attach the rigid pipe section to the adaptor by using Mill-Pac on the inner/outer pipe. Use 3 screws to secure outer pipe.

11. Secure inner flex pipe to pipe adaptor by using Mill-Pac over the adaptor. Slide the inner pipe over adaptor and secure with 3 screws.

12. Repeat Step 11 to secure outer flex.

13. Slide the finished length up towards the flashing ensuring the length of pipe is a minimum of 2 feet (0.61 m) measured from the top of the roof. Level the chimney and secure using the roof support provided with kit to bottom side of the roof as shown using a minimum of 2 screws per side - see Diagram 3a. See Diagram 4 for roof pitch and height requirements. See Diagram 3b for securing method if 2 ft. (0.61 m) is insufficient and additional lengths are required, this may be purchased separately. See Simpson Duravent components list in the instruction manual for part numbers.

</tbody>
</table>

14. Put a bead of caulking on the exterior between the outer pipe and flashing to prevent water from penetrating the chimney system.

15. Slide storm collar over pipe length until it reaches the flashing.

16. Install termination cap by twist locking it.

17. Secure the flashing to the roof using screws

Note: Any closets or storage spaces which the vent passes through must be enclosed.
Vertical Flue Extension Kit (Part #946-756)

20 foot (6.1 m) Flex pipe Extension
(Used in conjunction with the 946-755 Vertical flex kit and 948-367/P flex to flex adaptor).

1. Stretch out both inner 4” (102 mm) and outer 6 7/8” (175 mm) pipe up to a maximum of 20 feet.

   Note: The inner and outer pipes may be cut if only a short length is required.

2. Install spring spacers around 4” (102 mm) inner pipe as shown. Slide outer flex pipe over and all the way down the 4” pipe.

3. Apply a bead of Mill Pac around the perimeter of the 4” (102 mm) inner collar of the flex adapter and slip the 4” (102 mm) inner flex pipe from the Vertical termination kit over the flex adapter ensuring that the inner flex pipe overlaps the collar by at least 1-3/8” (35 mm). Fasten with 3 screws.

4. Apply a bead of Mill Pac around the perimeter of the 6-7/8” (175 mm) outer collar of the flue adapter and slip it over the 6-7/8” (175 mm) outer flex pipe from the vertical termination kit ensuring that the outer flex pipe overlaps the collar by at least 1-3/8” (35 mm). Fasten with the 3 screws.

5. Repeat steps to secure the other end of the flex adapter using the flex kit.

6. See Vertical Vent installation instructions for installation of the complete vent system.

   Note: If an offset is necessary in the attic or floor joists it is important to support the vent pipe every 3 feet (0.91 m) to avoid excessive stress and sagging of the vent pipe. Wall straps are provided (3 in total) for this purpose.

   All round/plumbers strapping may also be used if further supports are required.

Ceiling Firestop / Firestop Spacer (Part #946-757)

Used in conjunction with the 946-755 Vertical flex kit and 946-756 kit Vertical flex extension kit/Horizontal power vent kit.

A ceiling firestop/firestop spacer must be installed when passing through each floor or ceiling level. To install the ceiling firestop/firestop spacer in a flat ceiling or floor joist cut a 10-1/4 inch square hole. Frame the hole as show in Diagram 1 and install the ceiling firestop. Slide the top attic insulation spacer onto the top of the attic insulation shield/firestop - See Diagram 1a. Secure with 4 screws/nails. If more than one is required, these can be purchased separately.

   Note: The ceiling firestop/firestop spacer may be cut down to size if this shield is too high for the application.
Conversion from NG to LP for G800C using SIT 820 NOVA Gas Valve

THIS CONVERSION MUST BE DONE BY A QUALIFIED GAS FITTER IF IN DOUBT DO NOT DO THIS CONVERSION!

Installation of LP Conversion Kit:

1. Shut off the gas and electrical supply.
2. Remove the safety screen*.
3. Remove the glass door*.
4. Remove the logs, glass, and any other media*.
5. Remove the two log supports* and log grate assembly by removing 2 screws and sliding the tray forward to remove.

*(See specific instructions in unit manual.)

6. Remove three screws then remove the burner assembly.
7. Remove the pilot retainer clip below the pilot cap.
8. Pull off the pilot cap to expose the pilot orifice.
9. Unscrew the pilot orifice with the Allen key; then replace with the LPG pilot orifice, provided in the kit.
10. Re-install pilot cap and pilot retainer clip.
11. Remove burner orifice with a 3/8" wrench. Use another wrench to hold on to the elbow behind the orifice. Discard orifice.
12. Reinstall new burner orifice LPG stamped #53 and tighten.
13. Turn control knob to the "OFF position. Locate the Hi/Lo knob on the gas valve. See diagram below.

Each Kit contains one LP Conversion Kit

Diagram 1: Remove the left and right screws.

Diagram 2: Slide burner assembly to the right—then remove.

Insert a 5/32" or 4mm Allen wrench into the hexagonal key-way of the screw (Fig. 2), rotate it counter-clockwise until it is free and extract it.

Installer Notice:
These instructions must remain with the appliance.
16) Check that the screw is clean and if necessary remove dirt.

17) Flip the screw (Fig. 3).

18) Using the Allen wrench as shown in Fig. 4, rotate the screw clockwise until snug, do not overtighten.

19) Verify that if the conversion is from NG to LPG, the screw must be re-assembled with the red o-ring visible (Fig. 5).

20) Re-assemble the black protection cap (Fig. 6).

21) Reverse steps 6 - 1.

22) Attach the label “This unit has been converted to LPG” near or on top of the serial # decal.

23) Replace yellow "NG" label with red "LPG" label.

24) Reinstall burner assembly.

25) Adjust aeration accordingly—see manual for details. Aeration must be set to 5/16" (8 mm) for LP.

26) Reverse steps 4–1.

27) Check for gas leaks.

28) Check inlet and outlet pressures.

29) Check operation of flame control.

**WARNING!**

Do not over tighten the screw. Recommended to grip the wrench by the short side.

22) Attach the label “This unit has been converted to LPG” near or on top of the serial # decal.

23) Replace yellow "NG" label with red "LPG" label.

24) Reinstall burner assembly.

25) Adjust aeration accordingly—see manual for details. Aeration must be set to 5/16" (8 mm) for LP.

26) Reverse steps 4–1.

27) Check for gas leaks.

28) Check inlet and outlet pressures.

29) Check operation of flame control.

**WARNING!**

Also check that the pilot and main burner injectors are appropriate for the gas type.
Brick Panel installation

**Note:** Do not install the firebed grate, media, vermiculite, embers, and logs until the brick panels are installed.

Brick panels will discolor a little during normal operation. This is normal and should not be considered a defect.

1. Remove screen and glass door, if installed.
2. Loosen two screws in locations shown below. Slide upper baffle towards the back wall and then remove from unit.

3. Loosen 2 screws on pilot assembly in locations shown below. Slide pilot shield towards the back of the unit and remove from unit.

4. Install back panel carefully. Tilt panel forward from the top and rest the bottom of the panel on the firebox floor. Tip top back until it also rests on the firebox back wall.

5. Loosen screws and remove panel clips.

6. Install the right side panel—the angled corner should be located facing the bottom rear of the fireplace when installing.

**Note:** Shorter row of bricks should be positioned at the bottom of back and side panels.

7. With panel in position, secure it with the brick clip and one screw as shown below.

8. Repeat Steps 5-7 on the left side.

9. Slide the bottom panel carefully underneath the burner and push to the back until it contacts the back panel.

10. Reinstall the upper baffle.

11. Replace pilot shield removed in step 3.
Enamel/Steel Panel Installation

5. Loosen screws and remove brick clips.

6. Install the right side panel—the angled corner should be located facing the bottom rear of the fireplace when installing.

7. With panel in position, secure it with the brick clip removed in Step 5 and retighten the screw.

8. Repeat Steps 5-7 on the left side.

9. Slide the bottom panel carefully underneath the burner and push to the back until it contacts the back panel.

10. Reinstall the upper baffle.

11. Reinstall the pilot shield removed in step 3.

For Black Enamel Panels:
- Black enamel panels must be inspected for scratches and dimples prior to installation. All claims are to be recorded at this time. Claims for damage after installation will not receive consideration.
- Black enamel panels will discolor a little during normal operation. This is normal and should not be considered a defect.
- All hand and fingerprints MUST be cleaned off with a soft cloth. Use an ammonia-based cleaner (i.e., glass cleaner) to remove any fingerprints before applying heat to the unit.

Failure to do this will result in burn stains on panels which you will be unable to remove. Not protected by product warranty.

Note: Do not install the firebed grate, media, vermiculite, embers, and logs until the enamel/steel panels are installed.

1. Remove screen and glass door, if installed.

2. Loosen two screws in locations shown below. Slide upper baffle towards the back wall and then remove from unit.

3. Loosen 2 screws on pilot assembly in locations shown below. Slide pilot shield towards the back of the unit and remove from unit.

4. Install back panel carefully. Tilt panel forward from the top and rest the bottom of the panel on the firebox floor. Tip top back until it also rests on the firebox back wall.

For Black Enamel Panels:
- Black enamel panels must be inspected for scratches and dimples prior to installation. All claims are to be recorded at this time. Claims for damage after installation will not receive consideration.
- Black enamel panels will discolor a little during normal operation. This is normal and should not be considered a defect.
- All hand and fingerprints MUST be cleaned off with a soft cloth. Use an ammonia-based cleaner (i.e., glass cleaner) to remove any fingerprints before applying heat to the unit.

Failure to do this will result in burn stains on panels which you will be unable to remove. Not protected by product warranty.

Note: Do not install the firebed grate, media, vermiculite, embers, and logs until the enamel/steel panels are installed.
Log Set Installation

Read the instructions below carefully and refer to the diagrams. If logs are broken do not use the unit until they are replaced. Broken logs can interfere with the pilot operation.

The G800EC/G800C log sets, #761-930 for Oak, #761-932 for Birch, contain the following pieces:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Rear Log</td>
</tr>
<tr>
<td>2</td>
<td>Middle Left Log</td>
</tr>
<tr>
<td>3</td>
<td>Middle Right Log</td>
</tr>
<tr>
<td>4</td>
<td>Center Left Cross Log</td>
</tr>
<tr>
<td>5</td>
<td>Front Bottom ‘Y’ Log</td>
</tr>
<tr>
<td>6</td>
<td>Left Rear Log</td>
</tr>
<tr>
<td>7</td>
<td>Right Cross Log</td>
</tr>
<tr>
<td>8</td>
<td>Middle Front</td>
</tr>
<tr>
<td>9</td>
<td>Left Log Piece</td>
</tr>
<tr>
<td>10</td>
<td>Right Log Piece</td>
</tr>
<tr>
<td>11</td>
<td>Left Front Log Piece</td>
</tr>
<tr>
<td>12</td>
<td>Right Front Log Piece</td>
</tr>
</tbody>
</table>

Must also purchase (#761-938) Log Grate and Ember package separately. The kit contains:

- Log Grate
- 3/4” Ginger glass
- Vermiculite
- Black/White Embers
- Log Support Plates

NOTE: Panels (brick, steel, or enamel) must be installed prior to installing the log set.

1. Carefully remove the logs from the box and unwrap them. The logs are fragile, handle with care - do not force into position when installing.

2. Install the log grate—secure with 2 screws in locations show below.

3. Install the supplied crystals over the ember lights underneath the burner as shown. Place vermiculite and embers on top of the glass. Do not place any media on the burner.

- Diagram 1—Log ID
- Diagram 2—Log Grate Install
- Diagram 3—Install Glass
- Diagram 4—Install Vermiculite + Lava
4. Install 2 log support plates onto the burner with 2 screws each as shown.

5. Place Log 1 onto the grate, behind the rear of the burner. Ensure the left cut out butts against the end of the burner tube and the right end of the log butts against the curve of the burner. Final position of the log should be pulled forward and to the right while contacting the end and curved parts of the burner.

6. Install Log 2 on left log support plate. Line up the pins on the plate with the pin hole on the log.

7. Install Log 3 on right log support plate. Line up the pins on the plate with the pin hole on the log.

8. Install Log 4 diagonally across Log 2. Rest Log 4 in the notch out on Log 2 as shown.
9. Install Log 5, one end will rest in the notch out on Log 3—the "Y" end will rest on the 3rd prong from the right on the log grate.

10. Install Log 6 on the left side of Log 1. Line up the pin on Log 1 with the pin hole on Log 6—the opposite end of Log 6 will rest in the notch in Log 4.

11. Install Log 7 on the right side as shown. The pin hole on the underside of Log 7 should land on the pin of Log 1. The bottom of Log 7 will rest on the log grate.

12. Install Log 8 at the front of the log grate. The cutouts in Log 8 should rest in the 4th + 5th prongs from the right of the log grate.

13. Install Log 9 to the right of Log 5. The cutout in Log 9 will rest in the 2nd prong from the right on the log grate.

14. Install Log 10 as shown. The flat bottom will rest on the firebox floor and the opposite end will rest on the 3rd prong from the left.
15. Install Log 11 to the left of the log grate on the firebox floor as shown.

![Diagram 17—Install Log 11](image1)

16. Install Log 12 on the firebox floor—slide under Log 7 as shown.

![Diagram 18—Install Log 12](image2)

17. Test fire to ensure proper light off (make sure flame flows smoothly). If there is any flame hesitation, check that area for any blockage of the burner ports.

![Diagram 19—Final Installation](image3)
Crystal Tray Installation

Note: The optional brick, steel, or enamel panels must be installed prior to the crystal tray.

1. Place the crystal tray over the burner, as shown below.

2. Attach the crystal tray with two screws, one on the middle left and another on the middle right of the tray, as shown below.

3. Add 7 lbs of crystal media and spread it across the tray in one even layer. Important: ensure that at least 50% of the gas burner porting remains uncovered. Do not cover the pilot area.

4. If using volcanic stones as additional media, add a maximum of 13, as shown below. Important: Volcanic stones should not cover any of the gas burner porting or pilot areas.

5. To remove the crystal tray, reverse the steps above.
installation

Pilot Adjustment

Periodically check the pilot flames. Correct flame pattern has two strong blue flames: 1 flowing around the flame sensor and 1 flowing across the burner (it does not have to be touching the burner).

![Diagram of pilot adjustment]

Note: If you have an incorrect flame pattern, contact your Regency® dealer for further instructions.

Incorrect flame pattern will have small, probably yellow flames, not coming into proper contact with the rear burner or flame sensor.

High Elevation

This unit is approved in Canada for altitude to 4500 ft. (CAN/CGA-2.17-M91). For Natural Gas installations above 4500 ft. follow current CAN/ CGA-B149.1.

<table>

885 S.I.T. Valve Description

1. 6 Stage flame adjustment
2. Pilot adjustment
3. Inlet Pressure Tap
4. Outlet Pressure Tap
5. Pilot Outlet
6. Main Gas Outlet
7. Main Gas Inlet
Aeration Adjustment

The burner aeration is factory set but may need adjusting due to either the local gas supply or altitude. Open the air shutter for a blue flame or close for a more yellow flame. **CAUTION:** Carbon will be produced if air shutter is tightly closed.

Note: Any damage due to carboning resulting from improperly setting the aeration controls is NOT covered under warranty.

Pull lever forward to open - push back to close.

| Minimum Air Shutter Opening:  |
| NG | 1/4" (6 mm) |
| LP | 5/16" (8 mm) |

Electrical Access and Installation

The electrical access panel is on the right side of the unit (when facing the front of unit).

1. Remove panel by removing three (3) screws.
2. Remove center knockout to run cable through the access panel and install supplied clamp.
3. Attach wires from cable to supplied white receptacle and secure to gang box. Screw the receptacle cover to gang box. Reinstall panel by removing three (3) screws.
4. The 120 volt power cord supplied with appliance will need to be plugged into the receptacle only once the install is complete.
Optional Wall Thermostat

A wall thermostat may be installed if desired, connect the wires as per the wiring diagram. Use table below to determine the maximum wire length.

Note: Preferable if the thermostat is installed on an interior wall.

Regency® offers an optional programmable thermostat, but any 250-750 millivolt rated non-anticipator type thermostat that is UL approved may be used.

CAUTION
Do not wire millivolt wall thermostat wires to 120V wire.

Optional Remote Control

Use the Regency® Remote Control Kit approved for this unit. Use of other systems may void your warranty.

The remote control kit comes with a hand held transmitter, a receiver and a wall mounting plate.

1) Connect the two wires as per wiring diagrams.

CAUTION
Do not wire millivolt remote control wires to 120V wire.

3) Install 3 AAA alkaline batteries in the transmitter and 4 AA alkaline batteries in the receiver and follow the instructions that came with the remote control.

Optional Wall Switch

1) Run the supplied 10’ of wire through the right or left side gas inlet opening. Be careful not to damage wire.

Note: We recommend a maximum of 10’ of wire but if you wish to go with a longer run, use the Thermostat Wire Table.

2) Connect the wire to a wall switch and install into the receptacle box. Also attach wires to the valve as shown on wiring diagrams.

CAUTION
Do not wire millivolt wall switch wire to 120V wire.
Installing an Optional Wall Switch or Thermostat

A wall-mounted On/Off switch or Thermostat may be used to operate the on/off functionality of the main burner. External electricity is only required to operate the convection fan, and is not required to operate the fireplace. The millivolt gas control system uses the pilot flame to generate enough electricity to operate the main burner. To install a wall switch or thermostat, follow the directions below:

1. Remove safety screen, glass door and bottom cover panel (see manual for details).

2. Locate the black wire running from the valve to the unit on/off switch. Unclip the wire holder clip and remove the black wire from the clip.

3. Break the connection between the inline wire connectors on the black wire. The wall switch or thermostat wiring will run to these two connectors.

4. Route the wiring for your wall switch or thermostat from the wire connectors through the hole on the right side of the unit, using the supplied black plastic strain relief to secure the wiring as it passes through the unit.

5. Install the wall mounted on/off switch or thermostat as per local electrical code requirements.

Refer to the manual for the full wiring diagram.
This heater does not require a 120V A.C. supply for operation. In case of a power failure, it will continue to operate using the on/off switch provided.

**CAUTION:** Ensure that the wires do not touch a hot surface and are away from sharp edges.

*Contains 1 AA battery.*
Installing the Optional Fan (Part 761-974)

Important: 120 Volt AC power is needed for the blower. The receptacle box will be installed on the right hand side of the unit and will need to be wired by a qualified electrician prior to fan assembly being installed. The neutral (wider) slot of the polarized receptacle should be at the top.

Unit must be grounded at all times. Do not cut the ground terminal off under any circumstances.

1. Shut the power off.
2. Remove the safety screen, glass door and bottom cover panel (see unit manual for details).
3. From the back of the unit - remove 4 screws from the fan access panel (locations shown below).
4. Push fan speed control module towards the front of the unit (this will later be screwed in place from the front) and attach thermo-disc cage to bracket on the underside of the firebox.
5. Push power cord and ground wire towards front of unit. Connect two green ground wires to ground lug, accessed from the front of the unit. Refer to wiring diagram.
6. Secure fan speed control module in place with 2 screws.
7. Install fan assembly onto pins on unit floor.
8. Secure fan access panel back onto the unit with 4 screws.
9. Plug power cord into unit electrical outlet.
**Fan Install After Unit Installation**

The fan may be installed after the unit has been installed and finished. Ensure the unit is turned off and has cooled to room temperature.

1. Remove the screen, glass door, and bottom cover panel (see manual for instructions).
2. Remove any media already installed (logs, glass, etc.) and set aside.
3. Remove the log grate if installed.
4. Remove the burner by removing 3 screws.
5. Remove the ember media tray with 2 screws.
6. Remove the fan access panel by removing 8 screws.
7. Connect the 2 fan ground wires to the unit ground lug and secure the fan speed control module with 2 screws (see steps 4-5 from previous page). Tidy ground wires with provided plastic wire clip.
8. Install fan onto pins at the back right of the unit floor. Push down on the front of the fan bracket to raise the back of the fan assembly onto the pins.
9. Attach thermodisc cage to the bracket on the underside of the fan access panel.
10. Reinstall all removed components by reversing steps 1-6.
11. Plug fan power cord into unit electrical outlet (see step 8 from previous page)

**TO REMOVE THE FAN**

1. Shut the power off.
2. Reverse the above instructions.

**Note:** The bearings are lubricated for life. Do not lubricate them. Make sure you vacuum the fan area on a regular basis.

**IMPORTANT:**

These fans collect a lot of dust from within your home. Ensure you maintain these fan motors on a regular basis by vacuuming the fan blades and housing using a soft brush nozzle.
Fan Wall Control Installation Kit

The fan may be installed with the optional Wall Control Kit (7861-974), which allows the fan speed control module located inside the unit to be replaced by a wall mounted fan speed control.

**WALL CONTROL KIT MUST BE INSTALLED DURING UNIT INSTALLATION STAGE.**

1. Connect the supplied speed control switch and unit receptacle to the 120V mains power supply by following the wiring diagram as shown.

2. Remove the fan speed control module from the fan kit by breaking the connection of the wires at the connectors shown below. Discard the fan speed control module.

3. Reconnect the wires at connectors where the fan speed control module was previously located by using the supplied connector cable, as shown.

4. Install the fan kit as shown in the unit manual, disregarding the steps involving the fan speed control module.
Optional On/Off Remote Kit Installation

An optional on/off remote and receiver may be installed in the unit.

1. Connect the supplied speed control switch and unit receptacle to the 120V mains power supply by following the wiring diagram as shown.

2. Install 4 x AA batteries into the remote receiver and 3 x AAA batteries into the remote control.

3. Locate the black wire running from the valve to the unit on/off switch. Unclip the wire holder clip and remove the black wire from the clip.

4. Break the connection between the inline wire connectors on the black wire.

5. Connect the two connectors on the black wire to the two wires from the remote receiver, as shown.

6. Put the receiver in position in the holder bracket beneath the firebox, to the right of the DC Sparker and Fan Speed Control Module (if installed). Secure with supplied velcro strips.

7. Tidy the wires together and secure wires back into the wire holder clip.

NOTE: The remote receiver may be installed as a wall mounted switch if required. A wall mount cover plate is provided with the receiver. See instructions in this manual for Installing an Optional Wall Switch of Thermostat.
Safety Screen Removal

1. Slide screen up.
2. Slide screen right.
3. Lower screen down.
4. Swing screen outwards while keeping the screen level and remove.

Safety Screen Installation

1. To install the safety screen—Reverse steps above.

Glass Door Removal

1. To remove the glass door - place both hands on either side of the latch. Pull forward then up to unlock, repeat on opposite side.

Important: After releasing the latches, support the weight of the door.

2. With both latches released, support the door with both hands and tilt out to approximately a 60 degree angle.
3. Lift the door up and out of lower slots to remove.

Glass Door Installation

1. To install the door—Reverse steps above.
**Operating Instructions**

1. Read and understand these instructions before operating this appliance.

2. Check to see that all wiring is correct and enclosed to prevent possible shock.

3. Check to ensure there are no gas leaks.

4. Make sure the glass in the glass door frame is properly positioned. Never operate the appliance with the glass removed.

5. Verify that the venting and cap are unobstructed.

6. The unit should never be turned off, and on again without a minimum of a 60 second wait.

**First Fire**

The **FIRST FIRE** in your heater is part of the paint curing process. To ensure the paint is properly cured, it is recommended you burn your fireplace for at least four (4) hours the first time.

When first operated, the unit will release an odour caused by the curing of the paint and the burning off of any oils remaining from manufacturing. Smoke detectors in the house may go off at this time. Open a few windows to ventilate the room for a couple of hours. The glass may require cleaning.

**NOTE:** When the glass is cold and the appliance is lit, it may cause condensation and fog the glass. This condensation is normal and will disappear in a few minutes as the glass heats up.

**DO NOT ATTEMPT TO CLEAN THE GLASS WHILE IT IS STILL HOT!**

**DO NOT BURN THE UNIT WITHOUT THE GLASS DOOR IN PLACE.**

During the first few fires, a white film may develop on the glass front as part of the curing process. The glass should be cleaned after the unit has cooled down or the film will bake on and become very difficult to remove. Use a non-abrasive cleaner and **DO NOT ATTEMPT TO CLEAN THE GLASS WHILE IT IS HOT.**

**Normal Operating Sounds of Gas Appliances**

It is possible that you will hear some sounds from your gas appliance. This is perfectly normal due to the fact that there are various gauges and types of steel used within your appliance. Listed below are some examples. All are normal operating sounds and should not be considered as defects in your appliance.

**Burner Tray:**
The burner tray is positioned directly under the burner and is made of a different gauge material from the rest of the firebox and body. Therefore, the varying thicknesses of steel will expand and contract at slightly different rates which can cause "ticking" and "cracking" sounds. You should also be aware that as there are temperature changes within the unit these sounds will likely re-occur. Again, this is normal for steel fireboxes.

**Pilot Flame:**
While the pilot flame is on it can make a very slight "whisper" sound.

**Gas Control Valve:**
As the gas control valve turns ON and OFF, a dull clicking sound may be audible, this is normal operation of a gas regulator or valve.

**Unit Body/Firebox:**
Different types and thicknesses of steel will expand and contract at different rates resulting in some "cracking" and "ticking" sounds will be heard throughout the cycling process.
Receiver Battery Replacement (if optional remote control was purchased)

1. Remove screen. See instructions in this manual on screen removal.

2. Locate remote receiver (see diagram 1) located on right-hand side of the gas valve and DC spark box.

3. Remove battery compartment door to access batteries.

4. Remove all 4 AA batteries and replace with 4 new alkaline batteries ensuring they are the correct polarity.

5. Reinstall battery compartment door.

DC Spark Igniter Battery Installation/Replacement

1. Remove screen. See instructions in this manual on screen removal.

2. Locate DC sparker box (see diagram 2) located on right-hand side of the gas valve.

3. Install the supplied AA alkaline battery into the DC sparker box by opening the battery compartment door.

NOTE: The AA battery in the DC sparker box will need to be replaced annually. If the AA battery is weak, the pilot cannot be lit when depressing the pilot knob on the gas valve.

4. Follow the same steps to replace AA battery.
Copy of Lighting Plate Instructions

FOR YOUR SAFETY READ BEFORE LIGHTING
POUR VOTRE SÉCURITÉ — À LIRE AVANT LA MISE EN MARCHE

This appliance must be installed in accordance with local codes, if any; if none, follow the National Fuel Gas Code, ANSI Z223.1/NFPA 54, or Natural Gas and Propane Installation Codes, CSA B149.1.

Cet appareil doit être installé conformément aux codes locaux, s’il y a lieu. En l’absence de tels codes, suivez le National Fuel Gas Code, ANSI Z223.1/NFPA 54, ou les Natural Gas and Propane Installation Codes, CSA B149.1.

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life. Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to the owner’s information manual provided with this appliance. For assistance or additional information consult a qualified installer, service agency or gas supplier.

AVERTISSEMENT. Quiconque ne respecte pas à la lettre les instructions dans la présente notice risque de déclencher un incendie ou une explosion entrainant des dommages, des blessures ou la mort.

Une installation, d’ajustement, de modification, de service ou d’entretien peut provoquer des blessures ou des dommages matériels. Reportez-vous au manuel du propriétaire de l’appareil fourni avec cet appareil. Pour obtenir de l’aide ou des informations supplémentaires consulter un installateur qualifié, une agence de service ou fournisseur de gaz.

A) This appliance has a pilot that must be ignited by hand. When lighting the pilot, follow these instructions exactly.

B) BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS
- Do not try to light any appliance.
- Do not touch any electric switch, do not use any phone in your building.
- Leave the building immediately.
- Immediately call your gas supplier from a neighbours phone. Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

C) Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, do not try to repair it; call a qualified service technician. Force or attempted repair may result in a fire or explosion.

D) Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and replace any part of the control system and any gas control which has been underwater.

A) Ce pilote est muni d’une veilleuse qui doit être allumée manuellement. Respectez les instructions ci-dessous à la lettre.

B) AVANT LA MISE EN MARCHE, reniflez tout autour de l’appareil pour détecter une odeur de gaz. Reniflez au niveau du plancher, car certains gaz sont plus lourds que l’air et peuvent s’accumuler au niveau du sol.

QUE FAIRE SI VOUS SENTEZ UNE ODEUR DE GAZ :

- Ne tentez pas d’allumer l’appareil
- Ne touchez à aucun interrupteur; n’utilisez pas de téléphones se trouvant dans le bâtiment.
- Sortez du bâtiment immédiatement
- Appelez immédiatement votre fournisseur de gaz depuis un téléphone extérieur. Suivez les instructions du fournisseur.
- Si vous ne pouvez pas rejoindre le fournisseur, appelez le service incendie.
- Ne tentez pas de toucher ou de changer la veilleuse.

C) Ne pas ou tourner la manette d’admission du gaz qu’à la main. Ne jamais employer d’outil à cette fin. Si la manette reste coincée, ne tentez pas de la démonter; apportez-la à un technicien qualifié.

D) Ne vous approchez pas de cet appareil s’il a été plongé dans l’eau, même brièvement. Faites inspecter l’appareil par un technicien qualifié et remplacez tout élément du système de contrôle ou de commande qui a été plongé dans l’eau.

CAUTION: Hot while in operation. Do not touch. Severe burns may result. Due to high surface temperatures keep children, clothing, and other combustible materials away. Keep burner and control compartment clean. See installation and operating instructions accompanying appliance.

LIGHTING INSTRUCTIONS / CONSIGNES D’ALLUMAGE

STOP! Read the safety information above on this label.

1) Push in gas control knob slightly and turn clockwise to “OFF”. Knob cannot be turned from “PILOT” to “OFF” unless knob is pushed in slightly. Do not force.

2) Wait five (5) minutes to clear out any gas. If you then smell gas STOP! Follow step “B” in the Safety Information above on this label. If you don’t smell gas, go to the next step.

3) Push in gas control knob slightly and turn counterclockwise to “PILOT” position.

4) Push in control knob all the way and hold in until the pilot lights. Continue to hold the control knob in for about 20 seconds after the pilot lights.

5) Push in gas control knob slightly and turn counterclockwise to “ON” position.

6) Turn on the flame switch.

ARRÊTEZ ! Lisez les instructions de sécurité sur la portion supérieure de cette étiquette.

1) Enforcez légèrement le bouton de commande de gaz et tournez dans le sens horaire, en position OFF. Le bouton ne peut pas être tourné du PILOT à OFF à moins que le bouton ne soit enfoncé légèrement. Ne forcez pas.

2) Attendez cinq (5) minutes pour laisser échapper tout le gaz. Si vous sentez une odeur de gaz, ARRÊTEZ ! Passez à l’étape “B” des instructions de sécurité sur la portion supérieure de cette étiquette. S’il n’y a pas d’odeur de gaz, passez à l’étape suivante.

3) Enforcez légèrement le bouton de commande de gaz et tournez dans le sens antihoraire, en position PILOT.

4) Poussez le bouton de commande de gaz à fond et maintenez-le enfoncé jusqu’à ce que la veilleuse s’allume. Maintenez le bouton de commande de gaz enfoncé pendant environ 20 secondes après l’allumage de la veilleuse. Relâchez le bouton de commande de gaz.

5) Enforcez légèrement le bouton de commande de gaz et tournez dans le sens antihoraire, en position OFF.

6) Actionnez l’interrupteur de flamme.

TO TURN OFF GAS APPLIANCE / POUR ÉTEINDRE UN APPAREIL AU GAZ

1) Turn off the flame switch.

2) Push in the gas control knob slightly and turn clockwise to “OFF”. Do not force.

3) Turn off all electric power to the appliance if service is to be performed.

1) Fermez l’interrupteur de flamme.

2) Enforcez légèrement le bouton de commande de gaz et tournez dans le sens horaire, en position OFF. Ne forcez pas.

3) Avant d’effectuer des opérations d’entretien, coupez l’alimentation électrique de l’appareil.

Pour économiser le carburant, vous pouvez éteindre la veilleuse lorsque l’appareil reste longtemps inutilisé.

80 | Grandview® G800C Gas Fireplace
Maintenance Instructions

1. Always turn off the gas valve before cleaning. For relighting, refer to lighting instructions. Keep the burner and control compartment clean by brushing and vacuuming at least once a year. When cleaning the logs, use a soft clean paint brush as the logs are fragile and easily damaged.

2. Clean appliance and door with a damp cloth (never when unit is hot). Never use an abrasive cleaner. The glass should be cleaned with a gas fireplace glass cleaner. The glass should be cleaned when it starts looking cloudy.

3. Check for evidences of excessive condensation, such as water droplets forming in the inner liner, and subsequently dripping out the joints. Continuous condensation can cause corrosion of caps, pipe, and fittings. It may be caused by having excessive lateral runs, too many elbows, and exterior portions of the system being exposed to cold weather.

4. Inspect joints, to verify that no pipe sections or fittings have been disturbed, and consequently loosened. Also check mechanical supports such as Wall Straps, or plumbers' tape for rigidity.

Log Replacement

The unit should never be used with broken logs. Turn off the gas valve and allow the unit to cool before opening door and carefully remove the logs. (The pilot light generates enough heat to burn someone.) If for any reason a log should need replacement, you must use the proper replacement log. The position of these logs must be as shown in the Diagrams under Log Installation.

Note: Improper positioning of logs may create carbon build-up and will severely alter the unit's performance which is not covered under warranty.

Glass Gasket

If the glass gasket requires replacement use a tadpole glass gasket (Part #936-157).

Door Glass

Your Regency® fireplace is supplied with high temperature 5mm-Ceramic glass. If your glass requires cleaning, we recommend using an approved glass cleaner available at all authorized dealers. Do not use abrasive materials.

CAUTION & WARNINGS:

* Do not clean when the glass is hot.
* The use of substitute glass will void all product warranties.
* Care must be taken to avoid breakage of the glass.
* Do not strike or abuse the glass.
* Do not operate this fireplace without the glass front or with a cracked or broken glass front.
* Wear gloves when removing damaged or broken glass.
* Replacement of the glass panels should be done by a licensed or qualified service person.

Glass Replacement

In the event that you break your glass by impact, purchase your replacement from an authorized Regency dealer only. Replacement glass (Part #940-506/P) is shipped already installed into the door frame. Reinstall as per Glass Door Installation in the “Glass Door Removal” section.

General Vent Maintenance

Conduct an inspection of the venting system semi-annually. Recommended areas to inspect as follows:

1. Check the Venting System for corrosion in areas that are exposed to the elements. These will appear as rust spots or streaks, and in extreme cases, holes. These components should be replaced immediately.

2. Remove the Cap, and shine a flashlight down the Vent. Remove any bird nests, or other foreign material.

Note: Never operate the appliance without the glass properly secured in place.

6. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

7. In the event this appliance has been serviced check that the vent-air system has been properly resealed & reinstalled in accordance with the manufacturer's instructions.

8. Verify operation after servicing.
Valve Replacement

Removing Valve

1. Shut off the gas and electrical supply.
2. Remove the safety screen.
3. Remove the glass door.
4. Remove the logs and glass.
5. Remove the log grate assembly by removing 2 screws and sliding tray forward to remove.
6. Remove lower (brick or enamel) panel.
7. Slide the burner assembly to the right to release it from the orifice, then lift it out.
8. Remove 2 screws securing the fan access (Diagram 3).
9. Disconnect the inlet gas line.
10. Disconnect the two switch wires from the valve, as shown below.
11. Disconnect spark electrode from DC sparker box, as shown below.
12. Remove the 8 screws securing the valve tray assembly in place (Diagram 6) and then lift out entire assembly.
13. Remove Philips head screws securing DC sparker box, as shown below.

Replace Thermocouple

1. Follow steps 1-13 for replacing valve.
2. Disconnect thermocouple at gas valve.
3. Disconnect thermocouple at pilot assembly end.
4. Replace thermocouple.
Gas Appliance Maintenance

Recommended Annual Routine Maintenance for Gas Fireplaces, Stoves and Inserts

In order for your Regency appliance to continue to provide comfort to your home periodic maintenance must be performed to ensure it is operating at peak efficiency. The items in the list should be checked by a licensed gas service technician during the annual service check. Your unit may require more frequent maintenance checks if you notice any changes in how it operates. Operational changes to look for can include, but are not limited to, extended start up time, increased fan noise, residue/carbon build up, white build up on the glass/firebox, increased operating noise etc. Should any of these or other conditions arise, discontinue use and schedule a service check with your local licensed gas technician. The list below shows items your licensed service technician will need to check and service at least annually.

Clean
- Glass
- Interior bricks / panels
- Burner ports & burner air shutter
- Fan blades
- Log set
- Pilot orifices
- Pilot hood (change as needed)
- Flame sensor (electronic ignition models)
- Flame electrode
- Burner orifice
- Thermocouple (millivolt models)
- Thermopile (millivolt models)

Inspect
- Pilot assembly
- Burner
- Pressure relief gaskets/doors
- Flue connector gasket if present
- Door seal
- Firebox
- Venting
- Batteries (remote handheld, remote receiver, DC sparker, change as needed)
- Burner media (change as needed)
- Air shutter setting
- Wiring

Check
- Voltage on thermocouple/thermopile (millivolt models)
- Ohms reading on flame sense (electronic ignition models)
- Inlet/outlet fuel pressures as per rating plate
- Voltage/ohms readings on gas valve
- Ohms reading to on/off switch circuit (Millivolt models)

Gas Leak Tests
- Check main gas line connection to valve
- Check shut off valve connections
- Check connection at gas valve outlet
- Check connection at main burner orifice
- Check pilot fuel line at valve and at pilot assembly

Limited Lifetime Warranty
FPI Fireplace Products International Ltd. (for Canadian customers) and Fireplace Products U.S., Inc. (for U.S. customers) (collectively referred to herein as “FPI”) extends this Limited Lifetime Warranty to the original purchaser of this appliance provided the product remains in the original place of installation. The items covered by this limited warranty and the period of such coverage is set forth in the table below.

Some conditions apply (see below).

The policy is not transferable, amendable or negotiable under any circumstances.

Conditions:
Warranty protects against defect in manufacture or FPI factory assembled components only, unless herein specified otherwise.

Any part(s) found to be defective during the warranty period as outlined above will be repaired or replaced at FPI’s option through an accredited distributor, dealer or pre-approved and assigned agent provided that the defective part is returned to the distributor, dealer or agent for inspection if requested by FPI. Alternatively, FPI may at its own discretion fully discharge all of its obligations under the warranty by refunding the verified purchase price of the product to the original purchaser. The purchase price must be confirmed by the original Bill of Sale.

The authorized selling dealer, or an alternative authorized FPI dealer if pre-approved by FPI, is responsible for all in-field diagnosis and service work related to all warranty claims. FPI is not responsible for results or costs of workmanship of unauthorized FPI dealers or agents in the negligence of their service work.
At all times FPI reserves the right to inspect reported complaints on location in the field claimed to be defective prior to processing or authorizing of any claim. Failure to allow this upon request will void the warranty.

All warranty claims must be submitted by the dealer servicing the claim, including a copy of the Bill of Sale (proof of purchase by you). All claims must be complete and provide full details as requested by FPI to receive consideration for evaluation. Incomplete claims may be rejected.

Unit must be installed according to all manufacturers’ instructions as per the manual.

All Local and National required codes must be met.

The installer is responsible to ensure the unit is operating as designed at the time of installation.

The original purchaser is responsible for annual maintenance of the unit, as outlined in the owner’s manual. As outlined below, the warranty may be voided due to problems caused by lack of maintenance.

Repair/replacement parts purchased by the consumer from FPI after the original coverage has expired on the unit will carry a 90 day warranty, valid with a receipt only. Any item shown to be defective will be repaired or replaced at our discretion. No labor coverage is included with these parts.

Exclusions:
This Limited Lifetime Warranty does not extend to paint, rust or corrosion of any kind due to a lack of maintenance or improper venting, combustion air provision, corrosive chemicals (i.e. chlorine, salt, air, etc.), door or glass gasketing.

Malfunction, damage or performance based issues as a result of environmental conditions, location, chemical damages, downdrafts, installation error, installation by an unqualified installer, incorrect chimney components (including but not limited to cap size or type), operator error, abuse, misuse, use of improper fuels, lack of regular maintenance and upkeep, acts of God, weather related problems from hurricanes, tornados, earthquakes, floods, lightning strikes/bolts or acts of terrorism or war, which result in malfunction of the appliance are not covered under the terms of this Limited Lifetime Warranty.

FPI has no obligation to enhance or modify any unit once manufactured (i.e. as products evolve, field modifications or upgrades will not be performed on existing appliances).

This warranty does not cover dealer travel costs for diagnostic or service work. All labor rates paid to authorized dealers are subsidized, pre-determined rates. Dealers may charge homeowner for travel and additional time beyond their subsidy.

Any unit showing signs of neglect or misuse will not be covered under the terms of this warranty policy and may void this warranty. This includes units with rusted or corroded fireboxes which have not been reported as rusted or corroded within three (3) months of installation/purchase.

Units which show evidence of being operated while damaged, or with problems known to the purchaser and causing further damages will void this warranty.

Units where the serial no. has been altered, deleted, removed or made illegible will void this warranty.

Minor movement, expansion and contraction of the steel is normal and is not covered under the terms of this warranty.

FPI is not liable for the removal or replacement of facings or finishing in order to repair or replace any appliance in the field.

Freight damages for products or parts are not covered under the terms of the warranty.

Products made or provided by other manufacturers and used in conjunction with the FPI appliance without prior authorization from FPI may void this warranty.
**Limitations of Liability:**
The original purchaser’s exclusive remedy under this warranty, and FPI’s sole obligation under this warranty, express or implied, in contract or in tort, shall be limited to replacement, repair, or refund, as outlined above. IN NO EVENT WILL FPI BE LIABLE UNDER THIS WARRANTY FOR ANY INCIDENTAL OR CONSEQUENTIAL COMMERCIAL DAMAGES OR DAMAGES TO PROPERTY. TO THE EXTENT PERMITTED BY APPLICABLE LAW, FPI MAKES NO EXPRESS WARRANTIES OTHER THAN THE WARRANTY SPECIFIED HEREIN. THE DURATION OF ANY IMPLIED WARRANTY IS LIMITED TO DURATION OF THE EXPRESSED WARRANTY SPECIFIED ABOVE. IF IMPLIED WARRANTIES CANNOT BE DISCLAIMED, THEN SUCH WARRANTIES ARE LIMITED IN DURATION TO THE DURATION OF THIS WARRANTY.

Some U.S. states do not allow limitations on how long an implied warranty lasts, or allow exclusion or limitation of incidental or consequential damages, so the above limitations or exclusions may not apply to you.

Customers located outside the U.S. should consult their local, provincial or national legal codes for additional terms which may be applicable to this warranty.

**How to Obtain Warranty Service:**
Customers should contact the authorized selling dealer to obtain warranty service. In the event the authorized selling dealer is unable to provide warranty service, please contact FPI by mail at the address listed below. Please include a brief description of the problem and your address, email and telephone contact information. A representative will contact you to make arrangements for an inspection and/or warranty service.
