Warning

Fire or explosion Hazard
Failure to follow safety warnings exactly could result in serious injury, death, or property damage.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

- WHAT TO DO IF YOU SMELL GAS
  - Do not try to light any appliance.
  - Do not touch any electrical switch; do not use any phone in your building. Leave the building immediately.
  - Immediately call your gas supplier from a neighbour's phone. Follow the gas supplier's instructions.
  - If you cannot reach your gas supplier, call the fire department.

- Installation and service must be performed by a qualified installer, service agency or the gas supplier.
To the New Owner:

Congratulations!
You are the owner of a state-of-the-art Gas Fireplace by REGENCY®. The City Series are hand crafted appliances and have been designed to provide you with all the warmth and charm of a wood fireplace at the flick of a switch. The CV72EPV City Series have been approved by Intertek for both safety and efficiency. As it also bears our own mark, it promises to provide you with economy, comfort and security for many trouble free years to follow. Please take a moment now to acquaint yourself with these instructions and the many features of your Regency® Fireplace.

DANGER

HOT GLASS WILL CAUSE BURNS

DO NOT TOUCH GLASS UNTIL COOLED

NEVER ALLOW CHILDREN TO TOUCH GLASS

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and shall be installed for the protection of children and other at risk individuals.

CAUTION:
HOT WHILE IN OPERATION. DO NOT TOUCH.
SEVERE BURNS MAY RESULT. KEEP CHILDREN, CLOTHING, FURNITURE, GASOLINE, AND ANY LIQUIDS WITH FLAMMABLE VAPOURS AWAY.

KEEP BURNER AND CONTROL COMPARTMENT CLEAN.
SEE INSTALLATION AND OPERATING INSTRUCTIONS ACCOMPANYING APPLIANCE.

This appliance may be installed in an aftermarket, permanently located, manufactured home (USA only) or mobile home, where not prohibited by local codes.

This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases, unless a certified kit is used.
MANUFACTURED MOBILE HOME REQUIREMENTS
INFORMATION FOR MOBILE/MANUFACTURED HOMES AFTER FIRST SALE

This Regency® product has been tested and listed by Intertek as a Direct Vent Wall Furnace to the following standards: to Vented Gas Fireplace Heaters ANSI Z21.88-2017 • CSA 2.33-2017 and Gas-fired Appliances for Use at High Altitudes CSA 2.17-2017.

This Direct Vent System Appliance must be installed in accordance with the manufacturer's installation instructions and the Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280, or the current Standard of Fire Safety Criteria for Manufactured Home Installations, Sites, and Communities ANSI/NFPA 501A, and with CAN/CSA Z240-MH Mobile Home Standard in Canada.

This appliance installation must comply with the manufacturer's installation instructions and local codes, if any. In the absence of local codes follow the current National Fuel Gas Code, ANSI Z223.1 and the current National Electrical Code ANSI/NFPA 70 in the U.S.A., and the current CAN/CGA B149 Gas Installation Code and the current Canadian Electrical Code CSA C22.1 in Canada.

This Regency® mobile/manufactured home listed appliance comes factory equipped with four 1/4" diameter holes located near each corner of the base. Fasten the fireplace in place using screw, inserted through the holes.

This appliance comes equipped with a dedicated #8 Ground Lug for attachment of the ground wire to the steel chassis as applicable to local codes. See the "Wiring Diagram" section.

The appliance, when installed, must be electrically grounded in accordance with local codes or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70, or the Canadian Electrical Code, CSA C22.1.

This appliance may only be installed in an aftermarket permanently located, manufactured home (U.S.A only) or mobile home, where not prohibited by local codes.

This appliance can only be used with the type of gas indicated on the rating plate. This appliance is not convertible for use with other cases, unless a certified kit is used.

Ensure that structural members are not cut or weakened during installation.

We recommend that our products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) or in Canada by Wood Energy Technical Training (WETT).

This appliance must be installed in accordance with local codes, if any, or none, follow the National Fuel Gas Code, ANSI Z223.1, or Natural Gas and Propane Installation Code, CSA B149.1.

The State of Massachusetts requires the installation of a carbon monoxide alarm in accordance with NFPA 720 and a CO alarm with battery back up in the same room where the gas appliance is installed.

For the State of Massachusetts, installation and repair must be done by a plumber or gasfitter licensed in the Commonwealth of Massachusetts.

For the State of Massachusetts, flexible connectors shall not exceed 36 inches in length.

For the State of Massachusetts, the appliance individual manual shut-off must be a t-handle type valve.

The State of Massachusetts requires the installation of a carbon monoxide alarm.
Dimensions

Note: Height Dimension is taken with leveling legs fully inserted and may vary depending on the height of the leveling legs, when unscrewed or extended.

Dimensions will appear as (inches)" / (metric) mm throughout this manual. The inches are rounded to the nearest 1/16" when converted, when greater accuracy is required, use the metric dimensions.

Note: These units are non-load bearing.

ALL PICTURES / DIAGRAMS SHOWN THROUGHOUT THIS MANUAL ARE FOR ILLUSTRATION PURPOSES ONLY. ACTUAL PRODUCT MAY VARY DUE TO PRODUCT ENHANCEMENTS.
**Important Message**

**SAVE THESE INSTRUCTIONS**

City Line Direct Vent Fireplaces must be installed in accordance with these instructions. Carefully read all the instructions in this manual first. Consult the "authority having jurisdiction" to determine the need for a permit prior to starting the installation. It is the responsibility of the installer to ensure this fireplace is installed in compliance with manufacturer's instructions and all applicable codes.

### Before You Start

Safe installation and operation of this appliance requires common sense, however, we are required by the Canadian Safety Standards and ANSI Standards to make you aware of the following:

<table>
<thead>
<tr>
<th>INSTALLATION AND REPAIR SHOULD BE DONE BY AN AUTHORIZED SERVICE PERSON. THE APPLIANCE SHOULD BE INSPECTED BEFORE USE AND AT LEAST ANNUALLY BY A PROFESSIONAL SERVICE PERSON. MORE FREQUENT CLEANING MAY BE REQUIRED DUE TO EXCESSIVE LINT FROM CARPETING, BEDDING MATERIAL, ETC. IT IS IMPERATIVE THAT CONTROL COMPARTMENTS, BURNERS AND CIRCULATING AIR PASSAGEWAYS OF THE APPLIANCE BE KEPT CLEAN.</th>
</tr>
</thead>
<tbody>
<tr>
<td>DUE TO HIGH TEMPERATURES, THE APPLIANCE SHOULD BE LOCATED OUT OF TRAFFIC AND AWAY FROM FURNITURE AND DRAPERIES.</td>
</tr>
<tr>
<td>WARNING: FAILURE TO INSTALL THIS APPLIANCE CORRECTLY WILL VOID YOUR WARRANTY AND MAY CAUSE A SERIOUS HOUSE FIRE.</td>
</tr>
<tr>
<td>WE RECOMMEND REMOVING THE GLASS WITH THE GLASS VACUUM HOLDERS SUPPLIED BY THE MANUFACTURER. LOWER THE GLASS TO REST IN A SAFE PLACE. THIS IS TO PREVENT DAMAGE TO THE GLASS EDGES. EXTRA CARE MUST BE TAKEN WHEN REMOVING/INSTALLING THE GLASS. BREAKAGE OR DAMAGE TO THE EDGE OF THE GLASS WHICH OCCURS AS A RESULT OF CARELESS HANDLING WILL NOT BE COVERED UNDER WARRANTY.</td>
</tr>
<tr>
<td>CHILDREN AND ADULTS SHOULD BE ALERTED TO THE HAZARDS OF HIGH SURFACE TEMPERATURES, ESPECIALLY THE FIREPLACE GLASS, AND SHOULD STAY AWAY TO AVOID BURNS OR CLOTHING IGNITION.</td>
</tr>
<tr>
<td>YOUNG CHILDREN SHOULD BE CAREFULLY SUPERVISED WHEN THEY ARE IN THE SAME AREA AS THE APPLIANCE. TODDLERS, YOUNG CHILDREN AND OTHERS MAY BE SUSCEPTIBLE TO ACCIDENTAL CONTACT BURNS. A PHYSICAL BARRIERS IS RECOMMENDED IF THERE ARE AT RISK INDIVIDUAL IN THE HOUSE. TO RESTRICT ACCESS TO A FIREPLACE OR STOVE, INSTALL AN ADJUSTABLE SAFETY GATE TO KEEP TODDLERS, YOUNG CHILDREN AND OTHER AT RISK INDIVIDUALS OUT OF THE ROOM AND AWAY FROM HOT SURFACES.</td>
</tr>
<tr>
<td>CLOTHING OR OTHER FLAMMABLE MATERIAL SHOULD NOT BE PLACED ON OR NEAR THE APPLIANCE.</td>
</tr>
<tr>
<td>A BARRIER DESIGNED TO REDUCE THE RISK OF BURNS FROM THE HOT VIEWING GLASS IS PROVIDED WITH THIS APPLIANCE AND SHALL BE INSTALLED FOR THE PROTECTION OF CHILDREN AND OTHER AT-RISK INDIVIDUALS</td>
</tr>
<tr>
<td>ANY SAFETY SCREEN, GUARD, OR BARRIER REMOVED FOR SERVICING THE APPLIANCE, MUST BE REPLACED PRIOR TO OPERATING THE APPLIANCE.</td>
</tr>
<tr>
<td>IF THE BARRIER BECOMES DAMAGED, THE BARRIER SHALL BE REPLACED WITH THE MANUFACTURER’S BARRIER FOR THIS APPLIANCE.</td>
</tr>
</tbody>
</table>

**WARNING: Cancer and Reproductive Harm**

[www.P65Warnings.ca.gov](http://www.P65Warnings.ca.gov)
First Fire

The **FIRST FIRE** in your fireplace is part of the paint curing process. To ensure the paint is properly cured, it is recommended you burn your fireplace for at least four (4) hours the first time.

When first operated, the unit will release an odour caused by the curing of the paint and the burning off of any oils remaining from manufacturing. Smoke detectors in the house may go off at this time. Open a few windows to ventilate the room for a couple of hours. The glass may require cleaning.

**NOTE:** When the glass is cold and the appliance is lit, it may cause condensation and fog the glass. This condensation is normal and will disappear in a few minutes as the glass heats up.

**DO NOT ATTEMPT TO CLEAN THE GLASS WHILE IT IS STILL HOT!**

**DO NOT BURN THE UNIT WITHOUT THE GLASS IN PLACE.**

During the first few fires, a white film may develop on the glass front as part of the curing process. The glass should be cleaned after the unit has cooled down or the film will bake on and become very difficult to remove. Use a non-abrasive cleaner and **DO NOT ATTEMPT TO CLEAN THE GLASS WHILE IT IS HOT.**

Normal Operating Sounds Of Gas Appliances

It is possible that you will hear some sounds from your gas appliance. This is perfectly normal due to the fact that there are various gauges and types of steel used within your appliance. Listed below are some examples. All are **normal operating sounds** and should not be considered as defects in your appliance.

**Burner Tray:**
The burner tray is positioned directly under the burner tube(s) media and logs and is made of a different gauge material from the rest of the firebox and body. Therefore, the varying thicknesses of steel will expand and contract at slightly different rates which can cause “ticking” and “cracking” sounds. You should also be aware that as there are temperature changes within the unit these sounds will likely re-occur. Again, this is normal for steel fireboxes.

**Pilot Flame:**
While the pilot flame is on it can make a very slight “whisper” sound.

**Gas Control Valve:**
As the gas control valve turns ON and OFF, a dull clicking sound may be audible, this is normal operation of a gas regulator or valve.

**Unit Body/Firebox:**
Different types and thicknesses of steel will expand and contract at different rates resulting in some “cracking” and “ticking” sounds will be heard throughout the cycling process.
Lighting Procedure

**IMPORTANT:** The remote control system supplied with this appliance has several options for starting/operating the appliance using the battery holder and ON/OFF key on the hand held transmitter. Prior to operating this appliance, **please read** the remote control operating instructions (packaged with remote control) to understand how to operate this remote control system.

1. Ensure the battery holder switch is in the Remote position and / or wall mounted battery holder (if equipped) is in the <REMOTE> position.

2. Press and release the ON/OFF button on the remote handheld transmitter (see Diagram 1). An audible beep should be heard from the receiver. If not using the remote, the unit can also be turned on by sliding the battery holder switch to the <ON> position (if equipped).

3. After approximately 4 seconds the spark ignition system will spark for 60 seconds to light the pilot.

4. The unit will turn on.

**Note:** The first try for ignition will last approximately 60 seconds. If there is no flame ignition (rectification) the board will stop sparking for approximately 35 seconds. After wait time, the board will start second try for ignition by sparking for approximately 60 seconds. If there is still no positive ignition the board will go into lock out.

The system will need to be reset as follows:

a) Turn the system off by pressing the ON/OFF button on the remote.

b) Wait 5 minutes then repeat from step 2.

**Shutdown Procedure**

1. Press the ON/OFF button on the remote

2. If service is to be performed- you must disconnect power and shut off gas to the unit.

**On Demand Pilot (seven day safety timer)**

*Not offered on all models.*

**Fan Operation:** The standard fan can be operated by using the remote control supplied with this unit. See remote control instructions.

**Note:** In thermostat mode: When the appliance is turned on, the fan will not come on for the first 5 minutes (if fan is turned on). When the appliance is turned off the fan will not turn off for 12 minutes (if in on position)

**Manual mode:** Fan will turn on and off immediately using the remote control transmitter if the fan function is in the "on" position.

**Continuous Pilot/Intermittent Pilot (CPI/IPI) selection**

See remote control instructions for details.

---

**On Demand Pilot (seven day safety timer)**

**Important information if using the appliance in CPI (continuous pilot mode) only**

This appliance is a ProFlame 2 system fitted with the "On Demand" Pilot, a safety feature which will shut down the gas valve completely by extinguishing the pilot light in the event of a continuous full seven days of inactivity.

This only applies if the CPI (continuous pilot) switch is in the "on" position in your remote control transmitter.

Each time the main burner shuts down, manually or through the call from the thermostat, the seven day timer starts again.

The seven day inactivity timer is controlled within the circuit board. Therefore, if in CPI mode and when the pilot light is extinguished after seven straight days of inactivity, the CPI setting on the remote control transmitter will remain in the "CPI" (continuous pilot) position. Therefore, all that is required to relight the pilot would be to press the on/off button on the remote control transmitter from "on" to "off" and back to "on". Once the pilot has re-established operation will resume as normal. There is no requirement to do anything with the IPI/CPI mode on the remote control transmitter.

If the unit never goes as long as seven full days without a call for heat, the pilot will remain lit until it is manually shut-off.

If the unit is being operated in IPI (intermittent pilot) mode, neither the above instructions nor the seven day timer will apply.

See the instructions in this manual and on the Lighting Instructions plate on the appliance to light or re-light the pilot.
FOR YOUR SAFETY READ BEFORE LIGHTING

This appliance must be installed in accordance with local codes. If any, if none, follow the National Fuel Gas Code, ANSI Z223.1/NFPA 54, or Natural Gas and Propane Installation Codes, CSA B149.1.

Cet appareil doit être installé conformément aux codes locaux, s’il y a lieu. En l’absence de tels codes, suivez le National Fuel Gas Code, ANSI Z223.1/NFPA 54, ou les Natural Gas and Propane Installation Codes, CSA B149.1.

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life. Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to the owner’s information manual provided with this appliance. For assistance or additional information consult a qualified installer, service agency or gas supplier.

AVERTISSEMENT : Quiconque ne respecte pas scrupuleusement les instructions de la présente notice risque de déclencher un incendie ou une explosion pouvant entraîner des dégâts matériels ou des blessures pouvant être mortelles. Tout défaut d’installation, de réglage, de modification, de service ou d’entretien peut entraîner des blessures ou des dommages matériels. Reportez-vous au manuel d’utilisation fourni avec cet équipement. Pour obtenir de l’aide ou des informations complémentaires, consultez un installateur ou un service d’entretien qualifié, ou le fournisseur de gaz.

1) Ensure the Main switch is in the ON position and/or the wall mounted battery holder (if equipped) is in the <REMOTE> position.

2) Press and release the ON/OFF button on the remote handheld transmitter. An audible beep should be heard from the receiver. If not using the remote, the unit can also be turned on by sliding the battery holder switch to the <ON> position (if equipped).

3) After approximately 15 seconds the spark ignition system will spark for 60 seconds to light the main burner.

4) The unit will turn on.

Note: The first attempt to ignition will last approximately 60 seconds. If there is no flame ignition (rectification) the board will stop sparking for approximately 15 seconds. After this wait time, the board will start a second try for ignition by sparking for approximately 60 seconds. If there is still no positive ignition after the second attempt the board will go into lock out.

The system will need to be reset as follows (after going into lock out mode):

- Wait 5 minutes - turn the system off by pressing the ON/OFF button on the remote.
- After approximately 2 seconds press the ON/OFF button again.
- Unit will repeat step 2.

1) S’assurer que le commutateur principal est en position ON et/ou que le bloc-piles mural (le cas échéant) est en position <REMOTE>.

2) Appuyer sur la touche <ON> de la télécommande puis relâcher. Un bip sera émis depuis le récepteur. Si vous n’utilisez pas la télécommande, l’appareil peut également être allumé en faisant glisser le commutateur du bloc-piles sur la position <ON> (le cas échéant).

3) Après environ 15 secondes, le système d’allumage produira une étincelle pendant 60 secondes pour allumer le brûleur principal.

4) L’appareil s’allumera.

Remarque : Au premier allumage, le système tente d’allumer les flammes pendant 60 secondes. Si l’essai est infructueux, le système fera une pause de 35 secondes. C’est ce qu’on appelle l’étape de rectification. Ce délai écoulé, le système tente à nouveau d’allumer les flammes en produisant des étincelles pendant 60 secondes. Si les flammes ne s’allument toujours pas, le système se met en mode verrouillage.

Il faut alors le réinitialiser en suivant les étapes ci-dessous (pour le déverrouiller) :

a) Attendre 5 minutes et étendre l’appareil en appuyant sur la touche ON/OFF de la télécommande.

b) Attendre 2 secondes et appuyer encore une fois sur la touche ON/OFF.

c) L’appareil répétera l’étape 2.

TO TURN OFF GAS APPLIANCE / POUR ÉTEINDRE UN APPAREIL AU GAZ

1) Press the ON/OFF button on the remote.

2) If service is to be performed— you must disconnect power and shut off gas to the unit.

3) Appuyer sur la touche ON/OFF de la télécommande.

4) Lors de l’entretien de l’appareil, vous devez débrancher l’alimentation électrique et couper le gaz alimentant l’appareil.

DO NOT REMOVE THIS INSTRUCTION PLATE

NE PAS ENLEVER CETTE ÉTIQUETTE D’INSTRUCTIONS
Proflame II Remote Control Operating Instructions

**IMPORTANT:** The Proflame Transmitter 2 is an integrated part of the Proflame 2 System, which consists of these elements:
- Proflame 2 Transmitter, to be used in conjunction with:
- Integrated Fireplaces Control (Proflame 2 IFC)

The Proflame 2 Transmitter provides for controlling the following hearth appliance functions:
1. Main Burner On/Off
2. Main Burner flame modulation (6 levels)
3. Choice of standing or intermittent pilot (CPI/IPI)
4. Thermostat and Smart thermostat functions
5. Accent light modulation (6 levels)**
6. Split flow valve**
7. Comfort Fan speed modulation (6 levels)**

**This feature is not available on any Hampton models.

The Proflame Transmitter uses a streamlined design with a simple button layout and informative LCD display (Fig. 1). A Mode Key is provided to index between the features and a Thermostat Key is used to turn on/off or index through Thermostat functions (Fig. 1 & 2). Additionally, a Key Lock feature is provided (Fig. 22).

![Figure 1: Proflame Transmitter](image)

**OPERATING PROCEDURE**

**Initializing the System for the First Time**

Power the receiver. Press the PRG button located on the top right hand corner of receiver. The receiver will beep three times to indicate that it is ready to synchronize with a transmitter. Install the 3 AAA type batteries in the transmitter battery bay, located on the base of the transmitter (fig. 3). With the batteries already installed in the transmitter, push the ON button. The receiver’s command is accepted and sets to the particular code of that transmitter. The system is now initialized.

(*) The receiver may be independent or integral to the IFC hearth appliance control module. The receiver instruction may not be independent when part of the IFC.

**OPERATING PROCEDURE**

**Initializing the System for the First Time**

Power the receiver. Press the PRG button located on the top right hand corner of receiver. The receiver will beep three times to indicate that it is ready to synchronize with a transmitter. Install the 3 AAA type batteries in the transmitter battery bay, located on the base of the transmitter (fig. 3). With the batteries already installed in the transmitter, push the ON button. The receiver’s command is accepted and sets to the particular code of that transmitter. The system is now initialized.

(*) The receiver may be independent or integral to the IFC hearth appliance control module. The receiver instruction may not be independent when part of the IFC.

**WARNING:** THE TRANSMITTER AND IFC ARE RADIO FREQUENCY DEVICES.

**ATTENTION!**

- Turn “OFF” the main gas supply of the appliance during installation or maintenance of the IFC.
- Turn “OFF” main gas supply to the appliance prior to removing or reinserting the batteries.
- In case of remote control malfunction, turn off the IFC device using the “ON/OFF” main switch.
- For installation / maintenance, switch off the IFC device removing main power supply plug.

---

**IMPORTANT:** The Proflame Transmitter 2 is an integrated part of the Proflame 2 System, which consists of these elements:
- Proflame 2 Transmitter, to be used in conjunction with:
- Integrated Fireplaces Control (Proflame 2 IFC)

The Proflame 2 Transmitter provides for controlling the following hearth appliance functions:
1. Main Burner On/Off
2. Main Burner flame modulation (6 levels)
3. Choice of standing or intermittent pilot (CPI/IPI)
4. Thermostat and Smart thermostat functions
5. Accent light modulation (6 levels)**
6. Split flow valve**
7. Comfort Fan speed modulation (6 levels)**

**This feature is not available on any Hampton models.

The Proflame Transmitter uses a streamlined design with a simple button layout and informative LCD display (Fig. 1). A Mode Key is provided to index between the features and a Thermostat Key is used to turn on/off or index through Thermostat functions (Fig. 1 & 2). Additionally, a Key Lock feature is provided (Fig. 22).

**WARNING:** THE TRANSMITTER AND IFC ARE RADIO FREQUENCY DEVICES.

**ATTENTION!**

- Turn “OFF” the main gas supply of the appliance during installation or maintenance of the IFC.
- Turn “OFF” main gas supply to the appliance prior to removing or reinserting the batteries.
- In case of remote control malfunction, turn off the IFC device using the “ON/OFF” main switch.
- For installation / maintenance, switch off the IFC device removing main power supply plug.
Temperature indication Display

With the system in the “OFF” position, press the Thermostat Key and the Mode Key at the same time. Look at the LCD screen on the transmitter to verify that a C or F is visible to the right of the room temperature display (Figures 4 & 5).

Remote Flame Control

The Profilame has six (6) flame levels. With the system on, and the flame level at the maximum in the appliance, pressing the Down Arrow Key once will reduce the flame height by one step until the flame is turned off. The Up Arrow Key will increase the flame height each time it is pressed. If the Up Arrow Key is pressed while the system is on but the flame is off, the flame will come on in the high position. (Fig. 7 & 8) A single “beep” will confirm reception of the command.

Turn on the Appliance

With the system OFF, press the ON/OFF Key on the Transmitter. The Transmitter display will show some other active icons on the screen. At the same time the IFC will activate the appliance. A single “beep” from the IFC will confirm reception of the command.

Remote Flame Control

The Profilame has six (6) flame levels. With the system on, and the flame level at the maximum in the appliance, pressing the Down Arrow Key once will reduce the flame height by one step until the flame is turned off. The Up Arrow Key will increase the flame height each time it is pressed. If the Up Arrow Key is pressed while the system is on but the flame is off, the flame will come on in the high position. (Fig. 7 & 8) A single “beep” will confirm reception of the command.

Turn off the Appliance

With the system ON, press the ON/OFF Key on the Transmitter. The Transmitter LCD display will only show the room temperature (Fig. 6). At the same time the IFC will turn off the appliance. A single “beep” from the IFC confirms reception of the command.

Room Thermostat (Transmitter Operation)

The Remote Control can operate as a room thermostat. The thermostat can be set to a desired temperature to control the comfort level in a room. To activate this function, press the Thermostat Key (Fig. 1). The LCD display on the Transmitter will change to show that the room thermostat is “ON” and the set temperature is now displayed (Fig. 9). To adjust the set temperature, press the Up or Down Arrow Keys until the desired set temperature is displayed on the LCD screen of the Transmitter.
owner's information

Smart Thermostat (Transmitter Operation)

The Smart Thermostat function adjusts the flame height in accordance to the difference between the set point temperature and the actual room temperatures. As the room temperature gets closer to the set point the Smart Function will modulate the flame down.

To activate this function, press the Thermostat Key (Fig. 1) until the word “SMART” appears to the right of the temperature bulb graphic (Fig. 11).

To adjust the set temperature, press the Up or Down Arrow Keys until the desired set temperature is displayed on the LCD screen of the Transmitter (Fig. 12).

Note: When Smart Thermostat is activated, manual flame height adjustment is disabled.

Remote dimmer control (Light)**

The auxiliary function controls the AUX power outlet by the dimmable light control. To activate this function use the Mode Key (fig. 1) to index to the AUX icon (fig. 15 & 16).

The intensity of the output can be adjusted through six (6) levels. Use the Up/Down Arrow Keys (Fig. 1) adjust the output level (Fig. 16). A single “beep” will confirm reception of the command.

Fan Speed Control**

If the appliance is equipped with a hot air circulating fan, the speed of the fan can be controlled by the Proflame system. The fan speed can be adjusted through six (6) speeds. To activate this function use the Mode Key (fig. 1) to index to the fan control icon (Fig. 13). Use the Up/Down Arrow Keys (Fig. 1) to turn on, off or adjust the fan speed (fig. 14). A single “beep” will confirm reception of the command.

Split Flow control**

The secondary burner is controlled by the split Flow. To activate this function use the Mode Key (fig. 1) to index to the SPLIT FLOW mode icon (fig. 17 & 18).

Pressing the Up Arrow Key will activate the secondary burner. Pressing the Down Arrow Key will turn the secondary burner off. A single “beep” will confirm the reception of the command.
Continuous Pilot/Intermittent Pilot (CPI/IPI) selection

Note: Power vent models do not have a Continuous Pilot option.

With the system in “OFF” position press the Mode Key (fig. 1) to index to the CPI mode icon (fig. 19 & 20). Pressing the Up Arrow Key will activate the Continuous Pilot Ignition mode (CPI). Pressing the Down Arrow Key will return to IPI. A single “beep” will confirm the reception of the command.

Key Lock

This function will lock the keys to avoid unsupervised operation. To activate this function, press the MODE and UP Keys at the same time (fig. 21). To de-activate this function, press the MODE and UP Keys at the same time.

Low Battery Power Detection

Transmitter

The life span of the remote control batteries depends on various factors: quality of the batteries used, the number of ignitions of the appliance, the number of changes to the room thermostat set point, etc. When the Transmitter batteries are low, a Battery Icon will appear on the LCD display of the Transmitter (Fig. 22) before all battery power is lost. When the batteries are replaced this Icon will disappear.

Enable all other functions if not present on the remote transmitter, follow instructions noted below:
1. Remove one battery from remote.
2. Press and hold down the ON/OFF button at the same time.
3. Reinstall battery removed in Step 1 while holding down the MODE button.
4. The screen will show either “Clr” or “Set” as the first option available is to disable or enable a mode.
Glass Barrier Removal

1. Prepare a soft, scratch resistant surface to place the 70-3/8" x 15-1/4" glass (i.e. large sheet or clean drop cloth).
2. Attach the vacuum clamps to the glass as shown. Press the vacuum clamps against the glass, then close the clamps while maintaining pressure on the glass.
3. Slide the corner protectors onto the bottom corners of the glass. If you don’t have these, place a soft cloth or piece of cardboard under the glass barrier to protect the corners during removal.

4. Using the vacuum clamps, lift the barrier straight up, pull it toward you, then gently lower it straight down (see below).

5. Angle the bottom edge toward you and carefully lift the glass barrier out, placing it on your prepared soft, scratch resistant surface (i.e. drop cloth).
6. To reinstall, reverse steps.

Glass barrier removal video
**Inner Glass Panel (Firebox Glass) Installation / Removal**

**Note:** glass panels must be installed to operate fireplace

**WARNING: GLASS HANDLING**

We recommend using the glass vacuum holders supplied by the manufacturer. Lower the glass to rest in a safe place, this is to prevent damage to the glass edges. Extra care must be taken when removing/installing the glass. Breakage or damage to the edge of the glass which occurs as a result of careless handling will not be covered under warranty.

- We recommend handling the glass with supplied vacuum clamps
- When removing glass—prepare a soft, scratch resistant surface to place the 70-3/8”x15-1/4” glass
- Never clean or remove hot glass

*Note:* The suction cups may leave a round film on the glass when used. Ensure that the glass is cleaned using a fireplace glass cleaner after each removal and prior to operating the appliance.

1. Remove outer safety barrier glass panels if previously installed–see instructions in this manual.

2. Remove outer panels installed in unit - see panel removal section in this manual.

Press glass vacuum clamps in open position firmly onto surface of glass. Bring handles together to close.

<table>
<thead>
<tr>
<th>Open</th>
<th>Closed</th>
</tr>
</thead>
</table>

Handle glass with supplied vacuum clamps

*Note:* the following installation diagrams do not include the vacuum clamps but it is strongly recommended to use clamps at all times when handling the firebox glass.

3. From the front inside lower panel of the unit–pivot the 3 glass supports into upright position as shown below.

4. Open the 8 clamps at the top of the glass.

Glass supports in upright position

Top clamps in open position

Clamps in closed position

Clamps in open position

Glass removal video
5. Pull the 3 lower glass gasket pads forward to release the glass.

6. Support the glass with one hand and open the 9 lower clamps.

7. Locate the 2 levers below the glass and turn them both 90° in a clockwise direction to lower the firebox glass panel.

8. Carefully lean glass forward onto supports.

NOTE: The firebox glass may remain propped on the glass supports to clean the interior surface. Use care when cleaning – do not apply excessive force or pressure.

9. To remove the firebox glass panel from the unit: tilt the glass forward gently onto the glass supports, grip both suction clamps and lift the glass up and out of the unit.

10. To install glass--reverse steps.

IMPORTANT: Remove glass panel completely when installing or removing panels, logs, media, etc. to avoid causing any damage to the glass.
Optional Barrier Glass Stoppers Installation / Removal

There are 2 optional stops included in the manual pack which provide additional support to the glass barrier, if desired—install the stops prior to installation of the barrier glass.

1. If already installed, remove the side panel by pulling off and lifting out.

2. Slide the stopper bracket in between the front panel and the unit wall as shown.

3. Reinstall the side panel.

4. Repeat steps 1-3 on the opposite side.

5. Proceed to installation of the barrier glass.
owner's information

Bulb Replacement

1. Turn off power and gas to unit and allow to cool to room temperature.

2. Remove outer safety glass panels and inner panels (firebox glass)—see instructions in this manual.

3. Loosen 2 outer screws on each side to remove outer light cover — located in the upper inside front of the firebox.

4. Lift outer light covers up off tabs to remove.

5. Loosen 2 screws on each side of individual inner light cover and remove.

6. Replace bulb and reverse steps to complete procedure.

**NOTE:** Do not handle bulb with bare hands. Use packaging or a tissue to hold new bulb when replacing.

Regency Part# 911-208 Oven Lamp Assembly G9 120V/25W
Regency Part# 911-072 Replacement Bulb G9 120 Volt/25 watt
Maintenance Instructions

1. Always turn off the gas valve before cleaning. For relighting, refer to lighting instructions. Keep the burner and control compartment clean by brushing and vacuuming at least once a year. When cleaning the logs, use a soft clean paint brush as the logs are fragile and easily damaged.

2. Clean appliance and door with a damp cloth (never when unit is hot). Never use an abrasive cleaner. The glass should be cleaned with a gas fireplace glass cleaner. The glass should be cleaned when it starts looking cloudy.

3. The fireplace is finished in a heat resistant paint and should only be refinished with heat resistant paint. Regency® uses StoveBright Paint - Metallic Black #6309.

4. Make a periodic check of burner for proper position and condition. Visually check the flame of the burner periodically, making sure the flames are steady; not lifting or floating. If there is a problem, call a qualified service person.

5. The appliance and venting system must be inspected before use, and at least annually, by a qualified field service person, to ensure that the flow of combustion and ventilation air is not obstructed.

Note: Never operate the appliance without the glass properly secured in place.

6. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

7. In the event this appliance has been serviced check that the vent-air system has been properly resealed & reinstalled in accordance with the manufacturer's instructions.

8. Verify operation after servicing.

General Vent Maintenance

Conduct an inspection of the venting system semi-annually. Recommended areas to inspect as follows:

1. Check the Venting System for corrosion in areas that are exposed to the elements. These will appear as rust spots or streaks, and in extreme cases, holes. These components should be replaced immediately.

2. Remove the Cap, and shine a flashlight down the Vent. Remove any bird nests, or other foreign material.

3. Check for evidences of excessive condensation, such as water droplets forming in the inner liner, and subsequently dripping out the joints. Continuous condensation can cause corrosion of caps, pipe, and fittings. It may be caused by having excessive lateral runs, too many elbows, and exterior portions of the system being exposed to cold weather.

4. Inspect joints, to verify that no pipe sections or fittings have been disturbed, and consequently loosened. Also check mechanical supports such as Wall Straps, or plumbers' tape for rigidity.

Log Replacement

The unit should never be used with broken logs. Turn off the gas valve and allow the unit to cool before opening door and carefully remove the logs. (The pilot light generates enough heat to burn someone.) If for any reason a log should need replacement, you must use the proper replacement log. The position of these logs must be as shown in the diagrams under Log Installation.

Note: Improper positioning of logs may create carbon build-up and will severely alter the unit’s performance which is not covered under warranty.

Glass

Your Regency® fireplace is supplied with high temperature 5mm-Tempered outer glass & 5mm-Ceramic inner glass. If your glass requires cleaning, we recommend using an approved glass cleaner available at all authorized dealers. Do not use abrasive materials or ammonia based cleaners.

CAUTION & WARNINGS:

* Do not clean when the glass is hot.
* The use of substitute glass will void all product warranties.
* Care must be taken to avoid breakage of the glass.
* Do not strike or abuse the glass.
* Do not operate this fireplace without the glass front or with a cracked or broken glass front.
* Wear gloves and safety glasses when removing damaged or broken glass.
* Replacement of the glass panels should be done by a licensed or qualified service person.

Glass Replacement

In the event that you break your glass by impact, purchase your replacement from an authorized Regency dealer only. Replacement glass is shipped already installed into the door frame. Reinstall as per Glass Installation in the "Glass Installation" section.

REPLACEMENT GLASS:

CV72EPV
Outer Safety Glass - Tempered (Part#940-490/P)
Inner Glass - Ceramic (Part#940-450 /P)
MA Code - CO Detector
(for the State of Massachusetts only)

5.08: Modifications to NFPA-54, Chapter 10

(2) Revise 10.8.3 by adding the following additional requirements:

(a) For all side wall horizontally vented gas fueled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes, including those owned or operated by the Commonwealth and where the side wall exhaust vent termination is less than seven (7) feet above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied:

1. INSTALLATION OF CARBON MONOXIDE DETECTORS. At the time of installation of the side wall horizontal vented gas fueled equipment, the installing plumber or gasfitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed. In addition, the installing plumber or gasfitter shall observe that a battery operated or hard wired carbon monoxide detector with an alarm is installed on each additional level of the dwelling, building or structure served by the side wall horizontal vented gas fueled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard wired carbon monoxide detectors.

a. In the event that the side wall horizontally vented gas fueled equipment is installed in a crawl space or an attic, the hard wired carbon monoxide detector with alarm and battery back-up may be installed on the next adjacent floor level.

b. In the event that the requirements of this subdivision can not be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.

2. APPROVED CARBON MONOXIDE DETECTORS. Each carbon monoxide detector as required in accordance with the above provisions shall comply with NFPA 720 and be ANSI/UL 2034 listed and IAS certified.

3. SIGNAGE. A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print size no less than one-half (1/2) inch in size, "GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL OBSTRUCTIONS".

4. INSPECTION. The state or local gas inspector of the side wall horizontally vented gas fueled equipment shall not approve the installation unless, upon inspection, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CMR 5.08(2)(a)1 through 4.

(b) EXEMPTIONS: The following equipment is exempt from 248 CMR 5.08(2)(a)1 through 4:

1. The equipment listed in Chapter 10 entitled "Equipment Not Required To Be Vented" in the most current edition of NFPA 54 as adopted by the Board; and

2. Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

(c) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM PROVIDED. When the manufacturer of Product Approved side wall horizontally vented gas equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for installation of the equipment and the venting system shall include:

1. Detailed instructions for the installation of the venting system design or the venting system components; and

2. A complete parts list for the venting system design or venting system.

(d) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM NOT PROVIDED. When the manufacturer of a Product Approved side wall horizontally vented gas fueled equipment does not provide the parts for venting the flue gases, but identifies "special venting systems", the following requirements shall be satisfied by the manufacturer:

1. The referenced "special venting system" instructions shall be included with the appliance or equipment installation instructions; and

2. The "special venting systems" shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

(e) A copy of all installation instructions for all Product Approved side wall horizontally vented gas fueled equipment, all venting instructions, all parts lists for venting instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation.
General Safety Information

1. The appliance installation must conform with local codes or, in the absence of local codes, with the current Canadian or National Gas Codes, CAN1-B149 or ANSI Z223.1 Installation Codes.

2. See general construction and assembly instructions. The appliance and vent should be enclosed.

3. This appliance must be connected to the specified vent and termination cap to the outside of the building envelope. Never vent to another room or inside a building. Make sure that the vent is fitted as per Venting instructions.

4. Inspect the venting system annually for blockage and any signs of deterioration.

5. Venting terminals shall not be recessed into a wall or siding.

6. Any safety glass removed for servicing must be replaced prior to operating the appliance.

7. To prevent injury, do not allow anyone who is unfamiliar with the operation to use the fireplace.

8. Wear gloves and safety glasses for protection while doing required maintenance.

9. Be aware of electrical wiring locations in walls and ceilings when cutting holes for termination.

10. Under no circumstances should this appliance be modified. Parts that have to be removed for servicing should be replaced prior to operating this appliance.

11. Installation and any repairs to this appliance should be done by a qualified service person. A professional service person should be called to inspect this appliance annually. Make it a practice to have all of your gas appliances checked annually.

12. Do not slam shut or strike the glass door.

13. Under no circumstances should any solid fuels (wood, paper, cardboard, coal, etc.) be used in this appliance.

14. The appliance area must be kept clear and free of combustible materials, (gases and other flammable vapours and liquids).

Emissions from burning wood or gas could contain chemicals known to the State of California to cause cancer, birth defects or other reproductive harm.

Installation Checklist

1. Locate appliance. Refer to the following sections:
   a) Locating Your Fireplace
   b) Clearances
   c) Combustible Mantel Clearances
   d) Framing & Finishing
   e) Venting. See the "Venting Introduction" to "Venting Arrangements" sections.

2. Assemble Standoffs. Refer to the "Unit Assembly Prior to Installation" section. (NOTE: must be done before installing unit into fireplace.)

3. Install vent. See the "Horizontal Installations" to "Installation Procedures" sections.

4. Install 4 AA batteries into receiver battery box. Hook receiver to wiring marked receiver, this will enable operation of the appliance manually when position in "ON" position.

   Note: The wire harness (marked receiver) is located near the gas valve and will need to be routed to the exterior of the fireplace from either the left or right hand side of the appliance prior finishing.

5. Bring 120 volt power to appliance and 120 volt from the power vent cap to the appliance.

6. Make gas connections. Test the pilot. Must be as per diagram. Refer to the "Gas Line Installation" & "Pilot Adjustment" sections.

7. Install standard and optional features. Refer to the following sections where applicable:
   a. Barrier Safety Glass
   b. Firebox (inner) glass
   c. Log Set
   d. Fireglass
   e. Ceramic stones or other approved media
   f. Painted, enamel, or glass panels (panels required)
   g. Heatwave Kit
   h. Power vent cap

8. Plug 3 prong plug for the lights into the receptacle. The 3 prong plug will be located near the gas valve on the appliance.

Before leaving this unit with the customer, the installer must ensure that the appliance is firing correctly and operation fully explained to customer.

This includes:

1. Clocking the appliance to ensure the correct firing rate (rate noted on label 46,500 Btu/h NG / 45,500 Btu/h LP) after burning appliance for 15 minutes.

2. If required, adjusting the primary air to ensure that the flame does not carbon. First allow the unit to burn for 15-20 min. to stabilize.

CAUTION: Any alteration to the product that causes sooting or carboning that results in damage is not the responsibility of the manufacturer.

Heatwave Duct System Optional Kit

The HeatWave Air Duct Kit increases the effectiveness of your fireplace by dispersing warm air from the fireplace to remote locations in the same room or other rooms in your home.

Up to two kits may be installed on the fireplace.

The HeatWave Duct Kit has different clearance and framing requirements, check the HeatWave manual for details.
Locating Your Gas Fireplace

1. When selecting a location for your fireplace, ensure that the clearances are met.

2. The appliance must be installed on a flat, solid, continuous surface. For example, a wood, metal or concrete floor or in a raised (on the wall) application. The appliance must be installed on a metal or wood panel extending the full width and depth of the appliance.

3. The CV72EPV Direct Vent Gas Fireplace can be installed in a recessed position or framed out into the room as in A, B, C, and D. See Diagram 1.

![Diagram 1]

4. For bedroom installations, check with local codes before installation. This appliance is offered with a remote control.

5. The CV72EPV Direct Vent Gas Fireplace is approved for alcove installations, see "Clearances" section for details.

6. We recommend that you plan your installation on paper using exact measurements for clearances and floor protection before actually installing this appliance. Have an authorized inspector, dealer, or installer review your plans before installation.

Note: For vent terminations refer to "Exterior Vent Termination Locations" section.
**Unit Assembly Prior to Installation**

**Before You Start Removing the Unit from the Pallet**

Remove the screws securing the unit to the pallet.

Due to the size and weight (529 pounds shipping weight) of the CV72EPV, lifting and moving the unit will require 4 people.

Place a length (long enough to get a solid grip on each side) of 2 x 4 under the handle on each side.

Lift and move the unit carefully.

**Note:** When in position, the handles may be removed from the unit by removing 6 screws on each handle. Ensure that when the handles are removed that the screws are put back into place in all 12 holes locations where the handle had been previously (6 per side). The handles can be recycled.

**Side Standoff Assembly**

The CV72EPV has 4 standoffs, 2 on each side that need assembly before installing.

The standoffs are shipped in a flat position -- fold the standoff and install the standoff onto the unit by sliding the 2 tabs into the slots on the unit. Bend the tabs to secure. Secure opposite end of the standoff with one screw.

**Rear Standoffs**

The 8 rear standoffs are already attached to the appliance. Do not remove these standoffs. The 2 top rear standoffs are designed so that screws can be used to secure the appliance to the rear wall if needed. Studs must be in this location if choosing to screw this into studs.

**Leveling Legs**

There are four levelling legs - two on each side that can be adjusted (with the supplied tool--found in the manual package) if required.
installation

Access Panel Removal

The front access panels (x3) may be removed for ease of hooking up gas and electrical—prior to finishing. Once complete ensure that the access panel is reinstalled prior to any finishing. See locations in diagram to the right.

Note: Once the finished material is installed, these access panels are no longer accessible.

1. Identify access panel to be removed, remove corresponding outer trim panel by lifting up and off (centre panel shown below).

2. From inside the unit—push in tab to release the access panel at the top.

3. Push the access towards the inside of the unit, lift up from the bottom to release bottom tabs, when clear, lift out of unit.

4. Reverse steps to reinstall access panel.
Clearances

The clearances listed below are Minimum distances unless otherwise stated:
A major cause of chimney related fires is failure to maintain required clearances (air space) to combustible materials. It is of the greatest importance that this fireplace and vent system be installed only in accordance with these instructions.

Note: This appliance uses 4" x 6-5/8" venting

*A minimum of 288 square inches of open area, not lower than 0-2" from top of enclosure, required for all installations.

The HeatWave Duct Kit has different clearance and framing requirements, check the HeatWave manual for details.

Caution Requirements

The top, back and sides of the fireplace are defined by standoffs. The metal ends of the standoff may NOT be recessed into combustible construction.

** WARNING **

Fire hazard is an extreme risk if these clearances (air space) to combustible materials are not adhered to. It is of greatest importance that this fireplace and vent system be installed only in accordance with these instructions.

City Series CV72EPV | 27
installation

Mantel Clearances
Combustible mantel clearances from top of front facing are shown in the diagram on the right.

Mantel Leg Clearances
Combustible mantel leg clearances as per diagram:
**Framing Dimensions**

NOTE: Framing may be constructed of combustible material (ie. 2 x 4) and does not require steel studs.

<table>

</tbody>
</table>

* Important: Minimum overall vent run must be 4 feet. Even though centerline is 55 1/4 (Flex) & 59 1/4" (Rigid) if appliance is framed at minimum depth, the 4 feet of vent run could not be obtained. Center line will need to be increased in height in order to achieve a minimum vent run of 4 feet.

** See next page for alternate Gas/ Electrical connection options.

With the lift handles adding approximately 4 inches to the overall width of the appliance. In cases where the appliance would need to be raised off the ground in order to slide it into the framed opening, it is suggested that either the framing width change from 78" to 82" so that the appliance could be easily slid into position with the handles remaining on the appliance, or alternatively create a platform in front of the framed opening where the lift handles could be removed prior to sliding the appliance into its final position. Alternatively, if raised off the ground, the framing could be installed afterwards once appliance has been put into place and lift handles removed in order to keep the framing width at 78". Ensure that the wood base that the appliance will sit on is strong enough to support the full weight of this appliance. The overall weight of this appliance is 529 pounds (shipping weight).

---

Note: A combined minimum of 288 square inches of open area is required for the convection air outlet to cool the enclosure. Ensure clearances for Convection Air Outlets are met.

See clearances CV72EPV in this manual as there are different methods as to how this can be achieved.

Note: This appliance must be installed on a solid surface such as a plywood floor which must be the full width and depth of the appliance.
installation

Gas Connection - Back of Unit

Gas Connection - Bottom of Unit

Gas Connection - Side of Unit
Electrical Connection - Bottom of Unit

Front of Unit

77-7/16"

Back of Unit

Electrical Connection - Side of Unit

2-3/4"

Back of unit

4"
Framed Opening must be between 5” and 5.5” tall, and at least 74.25” wide to accommodate the Chase vent. The top of the chase vent opening must be 2” or less from the top of the chase enclosure.
Finish edges of drywall with trim or corner bead. Edge finish must not decrease opening area below 306in² (4.25"x72")
installation

1. Frame opening for vent
   (See Vent Framing Clearances Page)

2. Screw Chase vent to Framing

3. Use at least 4 sets of screws to keep the vent flat against framing

4. Frame wall with finishing material

5. If necessary, mark where the chase vent is located before fixing drywall in place

6. Cut hole in finishing material around inside of chase vent. Finish edges around opening
**Wall Board/Drywall Installation**

**WARNING!** Risk of Fire! Comply with all minimum clearances to combustibles as specified.

Finishing Instructions
It is important to follow the framing and finishing instructions to ensure proper placement of fireplace into the surrounding framing/finishing materials. Wall board materials 1/2 in. thick are specified in this installation manual to properly align with the optional finishing methods offered with this appliance. The CV72EPV may be finished to the appliance opening with 1/2 inch thick drywall.

- Ensure that the back and side clearances are maintained.

**WARNING!** Risk of Fire! Maintain specified air space clearances to combustibles. Inadequate air space could cause overheating and fire.

**DO NOT** use screws more than 1/2 inch in length on the lower access cover panel. Longer screws may penetrate gas line or damage valve or electrical components.

**Note:** It is acceptable to use a high temperature silicone sealant to adhere drywall to lower access cover panel.

The appliance is designed to be used with a minimum 1/2 in. wall sheathing materials such as drywall, plywood, wood composites, or non-combustible materials. Thicker materials may be used. Refer to facing and finishing details in this manual.

**Facing Material**
- Facing and/or finishing materials must never overhang into the glass opening. See finishing details in this manual.
- Facing materials may be combustible or non-combustible

**WARNING!** Risk of Fire! DO NOT apply combustible materials beyond the minimum clearances. Comply with all minimum clearances to combustibles as specified in this manual. Overlapping materials could ignite and will interfere with proper operation.

**PAINTING**
If desired finishing includes a painted wall, 100% acrylic latex, oil-based or standard acrylic paints may be used. Follow paint manufacturer's instructions for paint and primer application.

**No Screw Zones CV72EPV**
No screw zones (in shaded areas) as shown below must be adhered to.
Framing and Finishing Inset Installations

1. Frame in the enclosure for the unit with framing material

**Note:** When constructing the framed opening ensure there is access to install the gas lines, electrical. Also, the wiring harness must be wall mounted using the receptacle provided with the appliance. The wiring harness will be located on the right hand side of the appliance if facing the unit from the front. This must be done prior to any finishing.

2. For exterior walls, insulate the enclosure to the same degree as the rest of the house, apply vapour barrier and drywall, as per local installation codes. (Do not insulate the fireplace itself.)

**WARNING:** Failure to insulate and add vapor barriers to the inside of the exterior wall will result in operational and performance problems including, but not limited to: excessive condensation on glass doors, poor flame package, carbon, blue flames etc. These are not product related issues.

3. To ensure the chase is sealed from the outside wall into the room, all joints on the facing wall **MUST** be sealed, mudded, and taped to finish.

Note that in all applications while there is a zero clearance to combustibles to the unit, all clearances to combustibles from the venting inside the chase still applies. Please see venting clearances in the specific product manual.

4. Combustible material (drywall, wood, wood panels, etc.) may be brought up to the appliance (top, bottom and sides)

5. Ensure that the material being used does not encroach anywhere in the area of the glass. This would cause dangerous operating conditions.

6. This appliance comes with a 1/2” lip at top and bottom to hide the ends of the drywall. The 1/2” side and bottom lip supplied with the appliance can alternatively be removed (see Diagram 1) and replaced with J Style Trim or Metal Corner Bead purchased at your local hardware store to cover cut/ exposed edges of the combustible facing material or any other finishing materials being used. 6 screws secure the bottom lip — see Diagram 1. These will be hidden so the outer panels will need to be removed to access the screws. See outer panel removal in this manual.

7. This appliance can also be recessed (using combustible materials) with a hearth in front of the appliance. This can also extend to the top. See manual for details.

Drywall Lip - Bottom and Sides (Optional)

If desired the finishing lip on both sides and bottom may be removed. Remove the 2 screws on each side to remove the side drywall lip and loosen 6 screws (in locations shown below) from behind front face of unit with an offset screwdriver and lift off drywall trim to remove. The top drywall lip cannot be removed from the appliance. Also see finishing details on next page.
**Typical Installations**

**Flush Install**

- **Max 2”**
  - To Top of Enclosure

- **288in² min**
  - Chase Vent opening
  - Shown with Regency
  - Chase Vent 666-991

- **Max 2”**
  - To Top of Enclosure

- **1/2” drywall directly onto unit**

- **29 - 1/4” min**
  - Header Stud

- **25 - 3/4” min**
  - 25-3/4” min

- **61 3/4” min**
  - Hearth

- **Screws must not penetrate unit more than 1/2”**
  - Adhere to “No Screw” zones painted on unit.
  - Glue can be used as an alternative.

**Recessed Install**

- **Max 5 1/8”**
  - Mantle

- **Max 36”**
  - Hearth

- **2288in² min**
  - Chase Vent opening using a reveal to vent the chase

**Note:** The TV mounting bracket can not be secured directly to the appliance. It must be secured to framing. The TV depicted in the picture may need to be higher depending on the style of TV mounting bracket used. The mounting bracket shown is a simple single strip TV secured to framing.
**Finishing**

**Flush Install Example**

- Finish up to trim on all 4 sides

- Loosen screws using supplied Offset Screwdriver and remove bottom and side trim pieces

- Front edge of side liner panels must not be covered by finishing material or removal of the Firebox Glass will not be possible

- Bottom edge should be flush with top surface of Inner Liner Panel

**Recess Install Example**
Chase Venting

Note: The enclosure opening cannot be any lower than 0-2” from the top of the enclosure for all installations. Minimum height of enclosure from base of appliance is 87”.

A minimum 288in² opening in the enclosure is required to maintain safe operating temperatures. This can be achieved in a number of ways including the examples shown below.

Warning: DO NOT cover or place objects in front of the air outlet(s).

Regency Chase Vent
Dimensions: 4”x72” (288in²)

Custom chase vent
Example dimensions: 2.5”x116” (290in²)

Reveal at the chase top
Example dimensions: 2”x160” (320in²)
**Important Installation Note:**

The Battery Holder must be placed inside the supplied (Low Voltage) junction type wall box and installed into the wall only.

**Do Not Install Within The Confines Of The Fireplace**

**Switch Must Be Accessible**

**Battery Holder Installation**

1. Install the low voltage junction box to the framing, at desired location within 11-1/2 ft. from fireplace.
2. Feed the 6 pin connector wiring harness through the opening at back of junction box. The wiring harness is located on the right hand side and must be installed prior to finishing.
3. Connect the 6 pin connector to the back of the Battery Holder.
4. Install the Battery Holder in the Low Voltage Junction box.
5. Insert the 4 AA type batteries in the battery compartment with the correct polarity.
6. Place the slider into the cover plate.
7. Put the Battery Holder switch in the “OFF” position, to allow correct lineup for slider switch.
8. Make sure the Battery Holder and cover plate words “ON” and “UP” are on the same side.
9. Align the slider with the switch on the Battery Holder and couple the switch into the slider.
10. Align the screw holes.
11. Using the two (2) screws provided secure the cover plate to the Battery Holder.
12. For coding instructions, see full details in this manual.

</tr>
<tr>
<td>J</td>
<td>Clearance to service regulator vent outlet</td>
<td>36&quot;(90cm)</td>
</tr>
<tr>
<td>K</td>
<td>Clearance to non-mechanical air supply inlet to building or the combustion air inlet to any other appliance</td>
<td>12&quot;(30cm)</td>
</tr>
<tr>
<td>L</td>
<td>Clearance to a mechanical air supply inlet #3 (91cm) above if within 10’ (3m) horizontally.</td>
<td>72&quot;(1.8m)</td>
</tr>
<tr>
<td>M</td>
<td>Clearance above paved sidewalk or a paved driveway located on public property</td>
<td>84&quot;(2.1m)</td>
</tr>
<tr>
<td>N</td>
<td>Clearance under veranda, porch, deck, or balcony</td>
<td>12&quot;(30cm)</td>
</tr>
</tbody>
</table>

---

1. In accordance with current CSA B149.1, Natural Gas and Propane Installation Code
2. In accordance with the current ANSI Z223.1/NFPA 54, National Fuel Gas Code

* A vent shall not terminate directly above a sidewalk or paved driveway which is located between two single family dwellings and serves both dwellings.

† Permuted only if veranda, porch, deck, or balcony is fully open on a minimum of two sides beneath the floor.

‡ Clearance in accordance with local installation codes and the requirements of the gas supplier.

3. 3 feet (91cm) within a height of 15 feet (4.5m) above the meter / regulator assembly.

4. 3 feet (91cm) above - if within 10 feet (3m) horizontally.
### 4"x 6-5/8" Rigid Pipe Cross Reference Chart

Components from different Manufacturers may not be mixed. Not All Rigid Pipe components are available directly from FPI.

**IMPORTANT:** When using the inline Power Vent system & rigid pipe:

- **Vertical Terminations:** Only Simpson Duravent rigid pipe is approved for use. Must use the 46DVA-VCH vertical high wind cap as this is the only approved cap.
- **Horizontal Terminations:** Only the 946-523/P Astro horizontal cap may be used in conjunction with any of the vent systems noted below.

</tbody>
</table>
The gas power vent system is designed to allow the installation of a gas appliance when typical vent configurations (shown in this manual) are not possible.

Note: The CV72EPV comes with a 5" inner and 8" outer collar which must be reduced to 4" x 6 5/8" in all applications. Must be terminated horizontally. Vertical terminations are not permitted.

RIGID PIPE: MUST USE RIGID PIPE ADAPTOR 770-994 AND 946-606 PIPE REDUCER TO 4" X 6 5/8"

Note: Rigid pipe is approved for up to 72 feet.

FLEX VENT: MUST USE REDUCER 946-758 TO 4" X 6 5/8"

Note: Flex pipe is approved for up to 40 feet using 2 X 946-756-- 20 foot flex kits.

Important:
Maximum total vent length = 72' maximum of six - 90° elbows permitted.
One 90° elbow = two 45° elbows.
Maximum total negative vent length = 7'.

Note: Maximum length of 72 feet is based on overall length of combined chimney components.
Do not run positive venting after a negative run.

Vent Restrictor Position

No Vent Restrictor Required for the CV72EPV

Restrictor - Fully Open

Set 0
Fully open
Factory Set
Venting Arrangements for Horizontal Terminations

**Inline Horizontal Vent Chart**

RIGID PIPE: MUST USE RIGID PIPE ADAPTOR 770-994 AND 946-606 PIPE RECURDER TO 4" X 6 5/8" (102 mm x 168 mm).
Note: Rigid pipe is approved for up to 72 feet (21.95 m).

FLEX VENT: MUST USE REDUCER 946-758 TO 4" X 6 5/8" (102 mm x 168 mm).
Note: Flex pipe is approved for up to 40 feet (12.19 m) using 2 X 946-756-20 foot (6.10 m) flex kits.

The gas power vent system is designed to allow the installation of a gas appliance when typical vent configurations (shown in this manual) are not possible.

**Note:** This model comes with a 5" (127 mm) inner and 8" (203 mm) outer collar which must be reduced to 4" × 6 5/8" (102 mm x 168 mm) in all applications. Must be terminated horizontally. Vertical terminations are not permitted.

**Important:**
Maximum total vent length = 72' (21.95 m) maximum of six - 90° elbows permitted.
One 90° elbow = two 45° elbows.
Maximum total negative vent length = 7' (2.13 m).
Note: Maximum length of 72 (21.95 m) feet is based on overall length of combined chimney components.
Do not run positive venting after a negative run.

**Inline power vent location restrictions:**
- Minimum 4 ft (1.22 m) from the unit prior to an elbow.
- Minimum 1 ft (0.3 m) following an elbow.
- Minimum 1 ft (0.3 m) prior to a termination cap.

When the inline blower is installed after a negative run, for every foot of negative run the inline blower must be an equal distance or greater from the 90-degree elbow. See example above.

**Vent Restrictor Position**

No vent restrictor required.

**Set 0**
Fully open
Factory Set
Venting Arrangement for Vertical Terminations-Inline Power Vent

Vertical venting with straight vertical venting and or with a max. of six (6) 90° Elbows (1 - 90° - 2 - 45°)

- Two 45° elbows equal to one 90° elbow.
- Vent must be supported at offsets.
- Minimum distance between elbows is 1 ft. (0.3 m).
- Maintain clearances to combustibles as listed in the "Clearances" section.
- Horizontal vent must be supported every 3 feet (0.91 m).
- Firestops are required at each floor level and whenever passing through a wall.

Restrictor set on 0 (fully open) regardless of vent run.

Inline power vent location restrictions:
- Minimum 4 ft (1.22 m) from the unit.
- Minimum 1 ft (0.3 m) prior to an elbow.
- Minimum 1 ft (0.3 m) following an elbow.
- Minimum 2 ft (0.61 m) prior to a termination cap.
- Minimum 2 ft. from inline PV to termination cap.
- Minimum 4' from top of unit to inline PV.
- Max. of 72' (21.95 m), using up to six 90° elbows
  (Note: example shows two 90° elbows).
- No negative runs.

Note: The inline power vent must be installed within the confines of the home/structure.
Vertical Inline Power Vent Terminations - Rigid Pipe

The minimum components required when using inline power vent are:

1. High Wind Cap
2. Rigid Pipe Adaptor (770-994)
3. Ceiling Firestop
4. Flashing
5. Storm Collar
6. Lengths of pipe to suit wall thickness & vent run (see chart)
7. Vent Reducer
8. Inline Power Vent Kit

Galvanized pipe is desirable above the roofline due to its higher corrosion resistance. Continue to add pipe sections through the flashing until the height of the vent cap meets the minimum height requirements specified in table below or local codes. Note that for steep roof pitches, the vertical height must be increased. A poor draft, or down drafting can result from high wind conditions near big trees or adjoining roof lines, in these cases, increasing the vent height may solve the problem.

WARNING:

Do not combine venting components from different venting systems.

This product has been evaluated by Intertek for using a Rigid Pipe Adaptor in conjunction with Duravent Direct-Vent, Selkirk Direct-Temp, Ameri Vent Direct Venting, ICC Excel Direct, Olympia Ventis DV, and Security Secure Vent systems. Use of these systems with the Rigid Pipe adaptor is deemed acceptable and does not affect the Intertek WHI listing of components.
Venting Arrangements for Vertical Terminations

**Flex Pipe**

FLEX VENT: MUST USE REDUCER 946-758 TO 4" X 6 5/8" (102 mm x 168 mm)

Note: Flex pipe is approved for up to 40 feet (12.19 m) using one 20 foot (6.10 m) flex kit (part # 946-755) and one 20 foot (6.10 m) flex kit extension (part # 946-756).

Inline power vent location restrictions:
- Minimum 4 ft (1.22 m) from the unit.
- Minimum 1 ft (0.3 m) prior to an elbow.
- Minimum 1 ft (0.3 m) following an elbow.
- Minimum 2 ft (0.61 m) prior to a termination cap.
- Minimum 2 ft. (0.61 m) from inline PV to termination cap.
- Minimum 4ft (1.22 m) from top of unit to inline PV.
- Max. of 72' (21.95 m), using up to six 90° elbows
- (Note: example shows two 90° elbows).
- No negative runs.

**Power Vent Kit (Part #666-945)**
1 666-945 Power vent kit sold separately.
1 946-219/P Adaptor pipe included w/power vent kit.
1 946-755 20' (6.10 m) Vertical Flex Kit (sold separately) includes: 20 ft (6.10 m) flex pipe with 10 spacers (inner & outer pipe), 3 wall straps, ceiling firestop, roof brace, flex to rigid adaptor, roof support/brace, 36 in. (914 mm) rigid Duravent pipe, storm collar, high wind termination cap, hardware.
1 Max. 946-756 20' (6.10 m) flex kit extension (sold separately).
1 946-758 Reducer (required - sold separately).
1 Power vent fan included w/power vent kit.
1 911-250/P 45' (13.72 m) 5-wire BX cable (sold separately).
OR
1 911-251/P 90' (27.43 m) 5-wire BX cable (sold separately).

Must also purchase one of the flashings listed below:
1 46DVA-F12 Flashing 7/12 - 12/12
1 46DVA-F6 Flashing 0/12 - 6/12
1 46DVA-FF Flat roof flashing
Horizontal Terminations - Inline Power Vent
4” x 6-5/8” Flex Vent

These venting systems, in combination with the CV72EPV Direct Vent Gas Fireplace, have been tested and listed as a direct vent heater system by Intertek. The location of the termination cap must conform to the requirements in the Vent Terminal Locations diagram in “Exterior Vent Termination Locations” section.

Regency® Direct Vent (Flex) System Termination Kits include all the parts needed to install the CV72EPV using a flexible vent.

Notes:

1. Only Flex pipe purchased from Regency® may be used for Flex installations.
2. Horizontal vent must be supported every 3 feet (0.91 m).
3. Regency® Direct Vent System (Flex) is only approved for horizontal terminations.
4. Flex system can only be used up to a maximum vent length of up to 40 feet (12.19 m) using up to 2 x 20 ft (6.10 m) flex kits (part # 946-756). If longer runs are required, rigid pipe must be used.
5. Must use adaptor pipe (946-219/P) to connect inner flex pipe as shown.

Maximum total vent length = 72’ (21.95 m) maximum of six-90° elbows permitted.
One 90° elbow = two 45° elbows
Maximum total negative vent length = 7’ (2.13 m)

Note: Maximum length of 72’ (21.95 m) is based on overall length of combined chimney components.

Do not run positive venting after a negative run.

Inline power vent location restrictions:
Minimum 4 ft (1.22 m) from the unit
Minimum 1 ft (0.3 m) prior to an elbow.
Minimum 1 ft (0.3 m) following an elbow.
Minimum 1 ft (0.3 m) prior to a termination cap.
Minimum 6 ft (1.82 m) rise from top of unit if there is a negative run.

Horizontal Terminations - Inline Power Vent
Rigid Pipe 4" x 6-5/8"

The minimum components required for a basic horizontal termination are:
1. Horizontal Termination Cap
2. Power Vent Kit
3. Rigid Pipe Adaptor
4. Vent Reducer
5. Length of pipe to suit wall thickness and total vent run
   (see Table 1)
6. Adjustable pipe lengths/slips

Wall thickness is measured from the back standoffs to the inside mounting surface of termination cap. Create a level surface to mount the vent terminal. The Terminal must not be recessed into siding. Measure the wall thickness.

Horizontal Terminations - End of Line Power Vent
Rigid Pipe 4” x 6-5/8”

The minimum components required for a basic horizontal termination are:

1. Power Vent Kit
2. Rigid Pipe Adaptor
3. Vent Reducer
4. Length of pipe to suit wall thickness and total vent run (see Table 1)

Wall thickness is measured from the back standoffs to the inside mounting surface of termination cap. Create a level surface to mount the vent terminal. The Terminal must not be recessed into siding. Measure the wall thickness.

installation

Inline Power Vent Dimensions

[Diagram showing Inline Power Vent Dimensions with measurements in inches and millimeters]
Gas Power Vent Installation - Framing

Inline Power Vent Terminations

- The inline power vent can be mounted directly onto a wall, ceiling, stud or truss. Additional supports can be built to support the power vent if needed.
- The inline power vent can be oriented in any way if the access panel is accessible.

**NOTE:** The inline power vent will have a directional arrow which must be pointed away from the appliance.

**IMPORTANT:** The pressure switch must be oriented as shown below:

![Diagram 1: Inline power vent oriented vertically](image1)

**NOTE:** If the power vent is terminated vertically, no action is required for the pressure switch. If in a horizontal position, the pressure switch will need to be rotated. See instructions on next page.

![Diagram 2: Inline power vent oriented horizontally](image2)

**Pressure switch orientation if inline power vent is oriented vertically (see Diagram 1)**

**Pressure switch orientation if inline power vent is oriented horizontally (see Diagram 2)**

City Series CV72EPV | 53
To rotate the pressure switch in a horizontal position, follow the steps below:

1. Remove the 2 screws connecting the pressure switch mount to the mounting bracket.

2. Turn the mounting bracket 90 degrees, line up the holes and screw the bracket back onto the mount.
Gas Power Vent Installation Clearance Requirements

Inline Power Vent Terminations

Confined spaces (chase, closet, attic, behind a wall):

- 3” (76 mm) clearance is required on top of the power vent in a horizontal configuration (Diagram 2).
- 2” (51 mm) clearance is required on the sides and bottom in a horizontal configuration (Diagram 2).
- 1’ (0.3 m) clearance is required from the ends of the power vent in a horizontal configuration (Diagram 1).
- 2” (51 mm) clearance is required on sides in a vertical configuration (Diagram 2).
- 1’ clearance is required on ends in a vertical configuration (Diagram 1).
- A framed access hole with dimensions of 12” x 16” (305 mm x 406 mm) is required to access the access panel if the inline power vent is placed behind a wall (Diagram 3).
- The access hole can be covered with an open-air louver cover which allows 50% open air.
- The power vent must be installed where it can be easily accessed for servicing. An access hole as noted below, or an attic space, would be suitable.
Install the vent system according to the manufacturer's instructions included with the components.

1. Set the unit in its desired location. Check to determine if wall studs or roof rafters are in the way when the venting system is attached. If this is the case, you may want to adjust the location of the unit. Rough in the gas preferably on the right side of the unit and the electrical (junction block is on the left side) on the left.

2. Direct Vent pipe and fittings are designed with special twist-lock connections to connect the venting system to the appliance flue outlet. A twist-lock appliance adaptor is required.

3. In conjunction with the Approved Vent system, install the adaptor after the unit is set in its desired location. Put a bead of Mill-Pac inside the outer section of the adapter and a bead of Mill-Pac on the inner collar. Slip the adapter over the existing inner and outer flue collar. Fasten to the outer collar only with the 3 supplied screws (drilling pilot holes will make this easier).

4. Level the fireplace and fasten it to the framing using nails or screws through the top and side nailing strips.

5. Assemble the desired combination of pipe and elbows to the appliance adaptor and twist-lock for a solid connection.

Note: For best results and optimum performance with each approved venting system, it is highly recommended to apply Mill-Pac sealant (supplied) to every inner pipe connection. Failure to do so may result in drafting or performance issues not covered under warranty.

Horizontal runs of vent must be supported every 3 feet (0.9meter). Wall straps are available for this purpose.

6. Mark the wall for a square hole. See chart to left for size. The center of the square hole should line up with the center-line of the horizontal pipe. Cut and frame the square hole in the exterior wall where the vent will be terminated. See diagram 2 for center line requirements.

### Minimum Vent Clearances to Combustibles

*Clearances noted below must be maintained; except when passing through a wall, ceiling or at the termination where the use of a firestop or wall thimble reduces clearance to 1-1/2" (38mm).

Install the vent system according to the manufacturer's instructions included with the components.

1. Set the unit in its desired location. Check to determine if wall studs or roof rafters are in the way when the venting system is attached. If this is the case, you may want to adjust the location of the unit. Rough in the gas preferably on the right side of the unit and the electrical (junction block is on the left side) on the left.

2. Direct Vent pipe and fittings are designed with special twist-lock connections to connect the venting system to the appliance flue outlet. A twist-lock appliance adaptor is required.

3. In conjunction with the Approved Vent system, install the adaptor after the unit is set in its desired location. Put a bead of Mill-Pac inside the outer section of the adapter and a bead of Mill-Pac on the inner collar. Slip the adapter over the existing inner and outer flue collar. Fasten to the outer collar only with the 3 supplied screws (drilling pilot holes will make this easier).

4. Level the fireplace and fasten it to the framing using nails or screws through the top and side nailing strips.

5. Assemble the desired combination of pipe and elbows to the appliance adaptor and twist-lock for a solid connection.

Note: For best results and optimum performance with each approved venting system, it is highly recommended to apply Mill-Pac sealant (supplied) to every inner pipe connection. Failure to do so may result in drafting or performance issues not covered under warranty.

Horizontal runs of vent must be supported every 3 feet (0.9meter). Wall straps are available for this purpose.

6. Mark the wall for a square hole. See chart to left for size. The center of the square hole should line up with the center-line of the horizontal pipe. Cut and frame the square hole in the exterior wall where the vent will be terminated. See diagram 2 for center line requirements.

<td>13-1/2” x 13-1/2”</td>
</tr>
</tbody>
</table>

1. Locate the unit in the framing, rough in the gas (preferably on the right side of the unit). Locate the centerline of the termination and mark wall accordingly. Cut an square hole in the wall - see chart (inside dimension).
2. Level the fireplace and fasten it to the framing using nails or screws through the nailing strips.
3. Assemble the vent assembly by applying Mill Pac to the inner flue collar of the termination and slipping the inner flex liner over it at least 1-3/8” (35mm). Fasten with the 3 screws (drilling pilot holes will make this easier). Apply Mill-Pac to the outer flex pipe and slip it over the outer flue collar of the vent terminal at least 1-3/8” (35mm) and fasten with the 3 screws.

NOTE: Horizontal sections must be supported at intervals not exceeding 3 feet (0.9 meter). (Flame picture and performance will be affected by sags in the liner).

4. Slip the assembled liner and termination assembly through the thimble making sure the termination cap faces up (there are markings on the cap indicating which way is up). This will position the termination cap with proper down slope for draining water. Fasten the cap to the outer wall with the 4 supplied screws.
5. Pull the centre inner and outer flex liner out enough to slip over the flue collars of the fireplace. (You may wish to cut the liner shorter to make it more workable.) Do not bend liner more than 90°. The liners must slip over the collars a minimum of 1-3/8”.
6. Apply Mill Pac over the fireplace inner flue collar and slip the inner flex liner down over it and attach with 3 supplied screws.
7. Do the same with the outer flue collar and outer flex liner.
8. Apply a bead of silicone between the thimble and termination and around the outer edge of the terminal at the wall in order to keep the water out.

IMPORTANT: Do not locate termination hood where excessive snow or ice buildup may occur. Be sure to check vent termination area after snow falls, and clear to prevent accidental blockage of venting system. When using snow blowers, make sure snow is not directed towards vent termination area.
Vertical Inline Power Vent Terminations
Rigid Pipe

Note: A top clearance of 3’(76mm) and side bottom clearance of 2” (51mm) must be maintained, except when passing through a wall or ceiling, or at the termination where a firestop or wall thimble reduces the required clearance to 1-1/2” (38mm). We recommend framing a 11’(279mm) x 11’(279mm) (inside dimensions) hole to give structural rigidity for mounting the termination.

1) Maintain the 1-1/2” (38mm) clearances (air spaces) to combustibles when passing through ceilings, walls, roofs, enclosures, attic rafters, or other nearby combustible surfaces, ensuring a firestop or wall thimble is used as noted above. Do not pack air spaces with insulation. Check the “Venting Arrangement - Vertical Termination” section for the maximum vertical rise of the venting system and the maximum horizontal offset.

2) Set the gas appliance in its the desired location. Drop a plumb bob from the ceiling to the appliance flue exit and mark where the vent will penetrate the ceiling. Drill a small hole at this point. Next, drop a plumb bob from the roof to the hole drilled in the ceiling and mark where the vent will penetrate the roof. Determine whether ceiling joists, roof rafters, or other framing will obstruct the venting system. You may wish to relocate the appliance or to offset as shown in Diagram 2 to avoid cutting load bearing members.

3) A Firestop spacer must be installed in the floor or ceiling of every level.

A minimum of 4 feet is required between the unit and the inline power vent. Determine the overall height of the chimney from the top side of the inline power vent to the underside of the flashing.

4) Assemble the desired pipes and elbows. Ensure all pipes and elbow connections are twist-locked and sealed.

Note: For best results and optimum performance with each approved venting system, “Mill-Pac” sealant is strongly recommended at every inner pipe connection. Failure to use Mill-Pac may result in drafting or performance issues not covered under warranty.

5) Cut a hole in the roof centered on the small hole drilled in Step 2. The hole should be sized to meet the minimum requirement of 1-1/2” (38mm) clearance to combustibles. Slip the flashing under the shingles (shingles should overlap half the flashing) as per Diagram 4.

6) Continue to assemble pipe lengths. Support the inline power vent to avoid excessive stress on the pipe and elbows. The inline power vent can be screwed onto existing studs for support.

Note: If an offset is needed in the attic, it is important to support the vent pipe at every 3 feet (0.9 meter) to avoid excessive stress on the elbows and possible separation. Wall straps are available for this purpose (Diagram 2).

Galvanized pipe is desirable above the roofline due to its higher corrosion resistance. Continue to add pipe sections through the flashing until the height of the vent cap meets the minimum height requirements specified in Diagram 5 or local codes. Note that for steep roof pitches, the vertical height must be increased.

 DIAGRAM 5

A poor draft, or down drafting, can result from high wind conditions near big trees or adjoining roof lines. In these cases, increasing the vent height may solve the problem.

7) Ensure vent is vertical and secure the base of the flashing to the roof with roofing rails. Slide the storm collar over the pipe section and seal with a mastic.

8) Install and twist-lock the vertical termination cap.

Note: Any closets or storage spaces that the vent passes through must be enclosed.
Vertical Inline Power Vent Terminations (Part 946-755)
Flex Pipe

Note: The roof flashing is not included with this kit and must be purchased separately. Must choose 1 of the following:

<table>
<thead>
<tr>
<th>Part #</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>46DVA-F6</td>
<td>Flashing 0/12-6/12</td>
</tr>
<tr>

<td>Flashing 7/12</td>
</tr>
<tr>
<td>46DVA-FF</td>
<td>Flat Roof Flashing</td>
</tr>
</tbody>
</table>

Important: For the CV72EPV/CB72EPV models, the 946-758 reducer must be purchased for the top of the appliance. This must be attached to the inner and outer flue collar of the appliance prior to installation.

1. Maintain the 1-½” clearance (air space) to combustibles when passing through ceilings, walls, floors, enclosures, attic rafters or other nearby combustibles. Do not pack air spaces with insulation. Check Venting sections for the maximum vertical rise of the venting system and the maximum horizontal offset limitations.

2. Set the appliance in its desired position. Drop a plumb bob down from the ceiling/floor joist to the position of the appliance flue exit and mark the location where the vent will penetrate the ceiling. Drill a small hole at this point. Next drop a plumb bob from the roof to the hole previously drilled at the ceiling level and mark the spot where the vent will penetrate the roof.

3. Cut a hole in the roof centered on the small hole placed in the roof in the previous steps. The hole should be a minimum of 10-¾ inches. The hole may be round or square.

4. Slip the flashing under the shingles and line up flashing so it is centered to the hole (shingles should overlap half of the flashing) as per Diagram 1.

5. A ceiling firestop/firestop spacer must be installed when passing through each floor or ceiling level. To install the ceiling firestop/firestop spacer in a flat ceiling or floor joist cut a 10-¼ inch square hole. Frame the hole as show in Diagram 2 and install the ceiling firestop. Slide the top attic insulation spacer onto the top of the attic insulation shield/firestop - See Diagram 2a. Secure with 4 screws/nails. If more than one is required, these can be purchased separately.

Note: The ceiling firestop/firestop spacer may be cut down to size if this shield is too high for the application.

6. Determine the overall height of the chimney from the top of the appliance to the underside of the inline power vent. If required cut the flexible inner and outer pipe to the desired length up to a maximum of 20 feet.

7. Put a bead of Mill-Pac around the 4 inch collar on the appliance and slide the inner flex pipe over the inner collar of the appliance and secure with a minimum of 3 screws.

8. Install 4 inch spacers around 4 inch flex.

9. Repeat Step 7 to install the outer pipe to the outer collar of the appliance.

10. Repeat Step 7 to secure 4 inch flex to inline power vent. Repeat steps to attach outer collar to inline power vent.

Note: If an offset is necessary in the attic or floor joists it is important to support the vent pipe every 3 feet to avoid excessive stress and sagging of the vent pipe. Wall straps are provided (3 in total) for this purpose. All round/plumbers strapping may also be used if further supports are required.

11. Determine the overall height of the chimney from the top side of the inline power vent to the underside of the flashing. If required, cut the flexible inner and outer pipe to the desired length.

12. Put a bead of Mill-Pac around the inner pipe adaptor (supplied with the inline power vent) and attach the inner pipe adaptor to the inner collar of the inline power vent (see Diagram 3, next page).

13. Put a bead of Mill-Pac around the other end of the inner pipe adaptor and slide the 4" flex over the collar of the inner pipe adaptor; secure with 3 screws.

15. Put a bead of Mill-Pac around the outer collar of the inline power vent and slide outer pipe over the inline power vent; secure with 3 screws.

16. Attach the rigid pipe section to the flex to rigid adaptor using Mill-Pac on the inner/outer pipe. Use 3 screws to secure outer pipe.

17. Secure inner flex pipe to pipe adaptor using Mill-Pac over the adaptor. Slide the inner pipe over the flex to rigid adaptor and secure with 3 screws.

18. Repeat Step 17 to secure outer flex.
installation

Vertical Inline Power Vent Terminations
Flex Pipe

19. Slide the finished length up towards the flashing ensuring the length of pipe is a minimum of 2 feet measured from the top of the roof. Level the chimney and secure using the roof support provided with kit to bottom side of the roof as shown using a minimum of 2 screws per side- see Diagram 3b. See Diagram 4 for roof pitch and height requirements. See Diagram 3a for securing method if 2 ft. is insufficient and additional lengths are required, this may be purchased separately. See Simpson Duravent components list in the instruction manual for part numbers.

20. Put a bead of caulking on the exterior between the outer pipe and flashing to prevent water from penetrating the chimney system.

21. Slide storm collar over pipe length until it reaches the flashing.

22. Install termination cap by twist locking it.

23. Secure the flashing to the roof using screws

Note: Any closets or storage spaces which the vent passes through must be enclosed.

Vertical Flue Extension Kit (approved models)
Horizontal Power Vent Kit (CV72EPV, CB72EPV, CB40EPV, CV40EPV, & CC40EPV) (Part # 946-756)

Used in conjunction with the 946-755 Vertical Flex Kit for vertical installations or for horizontal installations when using the power vent option only where a maximum of 2 946-756 may be used up to a maximum of 40 feet (12.19 m). Only approved for power vent models for any horizontal termination.

1. Stretch out both inner 4" (102 mm) and outer 6 7/8" (175 mm) pipe up to a maximum of 20 feet (6.10 m).

**Note:** The inner and outer pipes may be cut if only a short length is required.

2. Install spring spacers around 4" (102 mm) inner pipe as shown. Slide outer flex pipe over and all the way down the 4" pipe.

3. Apply a bead of Mill Pac around the perimeter of the 4" (102 mm) inner collar of the flex adapter and slip the 4" (102 mm) inner flex pipe from the Vertical termination kit over the flex adapter ensuring that the inner flex pipe overlaps the collar by at least 1-3/8" (35 mm). Fasten with 3 screws.

4. Apply a bead of Mill Pac around the perimeter of the 6-7/8" (175 mm) outer collar of the flue adapter and slip it over the 6-7/8" (175 mm) outer flex pipe from the vertical termination kit ensuring that the outer flex pipe overlaps the collar by at least 1-3/8" (35 mm). Fasten with the 3 screws.

5. Repeat steps to secure the other end of the flex adapter using the flex kit.

6. See Vertical Vent installation instructions or horizontal power vent installation instructions for installation of the complete vent system.

**Note:** If an offset is necessary in the attic or floor joists it is important to support the vent pipe every 3 feet (0.91 m) to avoid excessive stress and sagging of the vent pipe. Wall straps are provided (3 in total) for this purpose.

All round/plumbers strapping may also be used if further supports are required.

**Note:** Power vent model only - the flex adaptor which is included with this kit is only required when joining two of the 946-756 flue extension kits to a maximum of 40 feet (12.19 m). If only 1 - 946-756 20 foot (6.10 m) kit is used the flex adaptor is not required.
Top Vent Reducer Installation - From 5" x 8" to 4" x 6-5/8"

Part # 946-758
Used in applications where flex venting is used.

1. Apply a bead of Millpack around the base of the inner vent collar. Slide the inner adapter over the collar and secure with 3 screws.

2. Apply a bead of Millpack around the base of the outer vent collar. Slide the outer adapter over the collar and secure with 3 screws.

3. Follow installation instructions for the Flex venting kit.

Ceiling Firestop/Firestop Spacer (Part 946-757)

Used in conjunction with the 946-755 Vertical flex kit and 946-756 kit Vertical flex extension kit/Horizontal power vent kit.

A ceiling firestop/firestop spacer must be installed when passing through each floor or ceiling level. To install the ceiling firestop/firestop spacer in a flat ceiling or floor joist cut a 10- ¼ inch square hole. Frame the hole as show in Diagram 1 and install the ceiling firestop. Slide the top attic insulation spacer onto the top of the attic insulation shield/firestop - See Diagram 1a. Secure with 4 screws/nails. If more than one is required, these can be purchased separately.

Note: The ceiling firestop/firestop spacer may be cut down to size if this shield is too high for the application.
Gas Power Vent Installation - Wiring the Inline Power Vent to the Unit

WARNING
ELECTRICAL CONNECTIONS SHOULD ONLY BE CARRIED OUT BY A QUALIFIED AND LICENSED ELECTRICIAN

NOTE: Must be mounted to the framing prior to wiring.

1. Remove the four screws and the cover plate.

2. Feed BX cable through the strain relief.

3. Tie the supplied zip tie loosely as shown below and pop it into the wall of the power vent box. Bring blue/red wires from the BX through the zip tie.

4. Install the second zip tie loosely on the bracket behind the pressure switch. Run the motor wires through the zip tie.

5. Connect ground wire to ground lug located on the side wall of the power vent box.

6. Connect wires from pressure switch to wires from BX cable - red to red and blue to blue. Cap paired wires with supplied marrette. Bundle and tighten zip tie installed in Step 3.

8. Reinstall cover plate with 4 screws.

NOTE: Pressure switch must always be oriented vertically inside the inline power vent.

NOTE: After exposure to heat, white wire will appear yellow and blue wires will appear green.

NOTE: Cut off existing connectors from fan motor and strip back to expose wires before connecting.
Gas Power Vent Installation - Wiring - End of Line Power Vent

**WARNING**
ELECTRICAL CONNECTIONS SHOULD ONLY BE CARRIED OUT BY A QUALIFIED AND LICENSED ELECTRICIAN

1. Frame an opening to the outside of the building at 13-1/2” W x 13-1/2” H to accommodate the Power Vent.

2. Run the venting and BX cable from the unit to the framed opening.

3. Install the strain relief (supplied) to the back of the Power vent mount box.

4. Strip the sheath from the BX cable to expose approximately 8” of exposed wires.

5. Feed the BX cable through the strain relief installed in Step 3.

6. Determine the building finishing material thickness.

7. Depending on the building material thickness, install the frame onto the Power Vent mount using 4 screws. Mounting holes start at 2" from the front of the Power Vent unit cover and can be adjusted back in 3/4” increments.

   **NOTE:** Exterior finishes such as thin vinyl siding may warp if closer than 2” from the vent. For interior installations on vinyl siding, a 2” frame/buffer zone must be created between the finishing and the vent.

8. Install the Power Vent unit into the framed opening using 4 screws as shown below.

9. Seal the edges of the Power Vent unit to the framing (there are two seams).
Gas Power Vent Installation-Wiring-End of Line Power Vent

10. Remove front faceplate from power vent unit by removing 4 screws as shown below.

11. Loosen 4 screws in locations shown below, lift rain guard off screws (key hole slots).

12. Inside the power vent box--connect the blue and red wires to the pressure switch as shown below.

13. Bundle the wires together with the supplied grommet and pop the grommet with wires into the bracket on the roof of the power vent box.

14. Install the second grommet onto the wires and secure grommet and wires into a bracket located on the side of the power vent box.

15. Connect ground wire to ground lug located at back of power vent box.

16. Connect wires from pressure switch to wires from BX cable--red to red and blue to blue. Cap paired wires with supplied marrette.

17. Connect remaining wires from the power vent motor to the BX cable- black to black and black to white. Cap paired wires with supplied marrette.

18. Reinstall rain guard and tighten screws.

19. Reinstall front faceplate with 4 screws.

Note: This power vent cap can be serviced externally or internally. If access to the exterior is not possible once installed due to height/location of the termination location, it is highly recommended that an access panel be placed near the rear of the termination inside of the enclosure where the power vent cap is located. The access panel should be large/close enough to be able to service the power vent cap. See maintenance section of manual to see how servicing is completed internally.
Gas Power Vent Installation--Wiring the Power Vent to the Unit

1. Remove exterior side panels and bottom panels (if installed) to gain access to junction box (Diagram 1).

2. Remove access panel by lifting panel up and out (Diagram 2). Unscrew 1 x Phillips head screw to gain access to junction box (Diagram 3).

3. Strip 24" of BX exposing wires, then run BX through strain relief on right side of the unit into the junction box (Diagrams 4 & 5).

   **Note:** The ground wire must stay out of the junction box as this will be attached later. Only the 4 colored wires go into the junction box.

4. Join Powervent and BX cable wires together by firstly splicing 1" off wires--join black to black, white to white (Diagram 6).

5. Join the Pressure switch and BX cable wires by splicing 1" off wires--join red to red and blue to blue (Diagram 7).

6. After the power and pressure switches have been connected, place wired connections into junction box and screw the junction cover plate back in place.

7. To make the ground connection, release the front right glass gasket pad by turning clips (3 total) counter-clockwise (Diagram 8).
8. Attach ground from the BX cable to existing ground located above IFC board (Diagram 9).

9. Once wiring is complete, plug unit into power located on the right side of unit, next to junction box (Diagram 10). Reinstall gasket pad removed in Step 7, access panel removed in Step 2, and exterior panels removed in Step 1.
installation

Wiring the Unit

The wiring for the unit should be completed before any finishing material is installed.

1. Remove the right access panel—see access panel removal instructions in this manual.

2. Loosen 2 screws in locations shown below.

3. Slide electrical box plate towards the back of the unit and then out.

4. Bring the wiring from inside the wall through the opening created when the plate was removed in the previous step.

5. Wire the electrical box.
   NOTE: The receptacle and receptacle cover may be located in the manual pack and may need to be installed.

6. Feed any excess wiring into the wall and reinstall the plate onto the wall of the unit.

7. Reinstall electrical box and plate onto screws.

8. Tighten screws to secure.
120 Volt AC power is required. A receptacle box, receptacle and cover are provided and located on the right hand side of the unit, under the outer base panel.

Electrical power must be brought to the appliance by a licensed electrician.

(Do not cut the ground terminal off under any circumstances.)

Caution: Ensure that the wires do not touch any hot surfaces and are away from sharp edges.

**CAUTION:** Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation.

This appliance is equipped with a three-prong (grounding) plug for your protection against shock hazard and should be plugged directly into a properly grounded three-prong receptacle. Do not cut or remove the grounding prong from this plug.
Gas Pipe Pressure Testing

The appliance must be isolated from the gas supply piping system by closing its individual manual shut-off valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psig. (3.45 kPa). Disconnect piping from valve at pressures over 1/2 psig.

The manifold pressure is controlled by a regulator built into the gas control, and should be checked at the pressure test point.

Note: To properly check gas pressure, both inlet and manifold pressures should be checked using the valve pressure ports on the valve.

1. Make sure the unit is in the "OFF" position.
2. Loosen the "IN" and/or "OUT" pressure tap(s), turning counterclockwise with a 1/8" wide flat screwdriver.
3. Attach manometer to "IN" and/or "OUT" pressure tap(s) using a 5/16" ID hose.
4. Turn the unit on with the remote or wall switch.
5. The pressure check should be carried out with the unit burning and the setting should be within the limits specified on the safety label.
6. When finished reading manometer, turn off the unit, disconnect the hose and tighten the screw (clockwise) with a 1/8" flat screwdriver. Note: Screw should be snug, but do not over tighten.

High Elevation

This unit is approved for altitude 0 to 4500 ft. (CAN1 2.17-M91).

Gas Line Installation

Since some municipalities have additional local codes it is always best to consult with your local authorities and the CAN/CGA B149 installation code. For USA installations follow local codes and/or the current National Fuel Gas Code, ANSI Z223.1.

When using copper or flex connectors use only approved fittings. Always provide a union so that gas lines can be easily disconnected for servicing. Flare nuts for copper lines and flex connectors are usually considered to meet this requirement.

Note: A shutoff / dante valve should be supplied in or near the unit (or as per local codes) for ease of servicing this appliance.

IMPORTANT: Always check for gas leaks with a soap and water solution or gas leak detector. Do not use open flame for leak testing.

Pilot Adjustment

Periodically check the pilot flames. Correct flame pattern has two strong blue flames: 1 flowing around the flame sensor and 1 flowing across the burner (it does not have to be touching the burner).

Incorrect flame pattern will have small, probably yellow flames, not coming into proper contact with the rear burner or flame sensor.

885 S.I.T. Valve Description

1) 6 Stage flame adjustment
2) Pilot adjustment
3) Outlet Pressure Tap
4) Inlet Pressure Tap
5) Pilot Outlet
6) Main Gas Outlet
7) Main Gas Inlet

Heatwave Deflector + Heatwave Venting Installation

NOTE: Install the Heatwave venting to the unit before moving unit into framing to allow access to the back screws.

1. Remove the deflector from the top of the unit by removing 4 screws.

2. Remove the knockout from the top of the unit and recycle.

3. Fold up 3 tabs up as shown.

4. Connect pipe adaptor with 3 screws (use the lower holes on the adaptor).

5. Connect the flex pipe to the adaptor with 3 screws.

6. Fold the deflector (removed from Step 1) fold the 4 tabs to 90° and secure the tabs to the unit with 4 screws.
Inner Glass Panel (Firebox Glass) Installation / Removal

To watch the glass installation video click here: http://youtu.be/DsPbbiLbdu

Note: glass panels must be installed to operate fireplace

**WARNING: GLASS HANDLING**

We recommend using the glass vacuum holders supplied by the manufacturer. Lower the glass to rest in a safe place, this is to prevent damage to the glass edges. Extra care must be taken when removing/installing the glass. Breakage or damage to the edge of the glass which occurs as a result of careless handling will not be covered under warranty.

- We recommend handling the glass with supplied vacuum clamps
- When removing glass–prepare a soft, scratch resistant surface to place the glass
- Never clean or remove hot glass

Note: The suction cups may leave a round film on the glass when used. Ensure that the glass is cleaned using a fireplace glass cleaner prior to operating the appliance.

1. Remove outer safety barrier glass panels if previously installed—see instructions in this manual.

2. Remove outer panels installed in unit - see panel removal section in this manual.

Press glass vacuum clamps in open position firmly onto surface of glass.

Bring handles together to close.

Handle glass with supplied vacuum clamps

Note: the following installation diagrams do not include the vacuum clamps but it is strongly recommended to use clamps at all times when handling the firebox glass.

3. From the front inside lower panel of the unit--pivot the 3 glass supports into upright position as shown below.

4. Open the 8 clamps at the top of the glass.

Glass supports in upright position

Top clamps in open position

Clamps in closed position

Clamps in open position
5. Support the glass with one hand and open the 9 lower clamps.

6. Pull the 3 lower glass gasket pads forward to release the glass.

7. Locate the 2 levers below the glass and turn them both 90° in a clockwise direction to lower the firebox glass panel. Carefully lean glass forward onto supports.

NOTE: The firebox glass may remain propped on the glass supports to clean the interior surface. Use care when cleaning -- do not apply excessive force or pressure.

9. To remove the firebox glass panel from the unit: tilt the glass forward gently onto the glass supports, grip both suction clamps and lift the glass up and out of the unit.

10. To install glass--reverse steps.

IMPORTANT: Remove glass panel completely when installing or removing panels, logs, media, etc. to avoid causing any damage to the glass.
Optional Barrier Glass Stoppers Installation / Removal

There are 2 optional stoppers included in the manual pack which provide additional support to the glass barrier, if desired--install the stoppers prior to installation of the barrier glass.

1. If already installed, remove the side panel by pulling off and lifting out.

2. Slide the stopper bracket in between the front panel and the unit wall as shown.

3. Reinstall the side panel.

4. Repeat steps 1-3 on the opposite side.

5. Proceed to installation of the barrier glass.
LP Conversion Instructions

**THIS CONVERSION MUST BE DONE BY A QUALIFIED GAS FITTER IF IN DOUBT DO NOT DO THIS CONVERSION!**

**WARNING**
This conversion kit shall be installed by a qualified service agency in accordance with the manufacturer’s instructions and all applicable codes and requirements of the authority having jurisdiction. If these instructions is not followed exactly, a fire, explosion or production of carbon monoxide may result causing property damage, personal injury or loss of life. The qualified service agency is responsible for the proper installation of this kit. The installation is not proper and complete until the operation of the converted appliance is checked as specified in the manufacturer’s instructions supplied with the kit.

<table>
<thead>
<tr>
<th>Conversion Kit 666-969 includes:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1  911-011  Stepper Motor LP for 885 SIT</td>
</tr>
<tr>
<td>1  905-014  Orifice #47</td>

<tr>
<td>1  910-101  Pilot Orifice #35</td>
</tr>
<tr>
<td>1  918-590  Decal - Conversion to LP</td>
</tr>
<tr>
<td>1  908-528  Label Propane</td>
</tr>
<tr>
<td>1  904-529  5/32” long Allen Key</td>
</tr>
</tbody>
</table>

Caution: The gas supply shall be shut off prior to disconnecting the electrical power, before proceeding with the conversion.

Always let the appliance cool to room temperature before servicing.

1. Remove the outer panels and safety glass — see manual.
2. Remove inner firebox glass — see manual.
3. Remove inner panels — see manual.
4. Remove all media installed on burner (glass, logs or stones, etc).
5. Lift off the far right base panel and loosen 2 screws on IFC cover—removed cover to access IFC.

6. Disconnect the Cable coming from the Pressure Regulator Motor.

7. Remove and discard 2 Pressure regulator screws (A) using a (T20 or slot screwdriver.) Pressure Regulator (B) and Spring and Diaphragm (C) (see below).

8. Ensure the rubber gasket, which is prefit as part of the Assembly, is properly positioned. Install the new Pressure Regulator using the 2x M4 x .7 screws supplied. Tighten the screws to 25lb-in. In the event that the screw threads are cross threaded or stripped, replace the valve assembly.

Install the enclosed propane identification label to the valve body where it can be easily seen.

9. Re-attach the Pressure Regulator wire (disconnected in Step 6), and re-situate the IFC, secure the screws that fasten the IFC Mounting Brackets.

10. Remove pilot hood by lifting up and off.

11. Remove the trim cover on right side of burner by lifting off. Also remove the burner surround by sliding to the left and lifting off.
12. Bend the arm of the aeration lever bracket up from 90° to straighten and release aeration lever (lever will come with the burner).

13. Loosen 8 screws in locations shown below (2 at front and 2 at rear)—slide burner to the left away from the orifice and lift out.

14. Remove burner orifice with a 3/8” wrench. Use another wrench to hold on to the elbow behind the orifice. Discard orifice. Reinstall new burner orifice LPG stamped #47 and tighten.

15. Remove pilot retainer clip with pliers and pull off the pilot cap to expose the pilot orifice.

16. Unscrew the pilot orifice with the Allen key; then replace with the LPG pilot orifice and the pilot cap, provided in the kit.

17. Reinstall pilot cap and pilot retainer clip.

18. Prior to installing burner—adjust aerations settings - to 3/8” for LP. Reinstall burner (see Step 11).

19. Ensure the pilot light is in the correct orientation to the Burner. Reconnect the gas and electrical supply to the appliance. Start the appliance. (see section on Lighting Instructions) Ensure that pilot and burner ignition is completed without delay. Check both your inlet and outlet pressures at full load. With a soapy solution, leak test the entire system. Verify both the correct flame and pilot appearance.

**Installer Notice:**

These instructions must be left with the appliance.
Bulb Replacement

1. Turn off power and gas to unit and allow to cool to room temperature.

2. Remove outer safety glass panels and inner panels (firebox glass)—see instructions in this manual.

3. Loosen 2 outer screws on each side to remove outer light cover — located in the upper inside front of the firebox.

4. Lift outer light covers up of tabs to remove.

5. Loosen 2 screws on each side of individual inner light cover and remove.

6. Remove glass cover by using a flat head screwdriver to pry the tab securing the glass assembly in place.

7. Replace bulb and reverse steps to complete procedure.

NOTE: Do not handle bulb with bare hands. Use packaging or a tissue to hold new bulb when replacing.

Regency Part# 911-208 Oven Lamp Assembly G9 120V/25W
Regency Part# 911-072 Replacement Bulb G9 120 Volt/25 watt
installation

Painted Panel Installation

**Inner Panels**

The CV72E may be equipped with optional steel inner panels.

CV72E - 5 outer panels and 10 inner panels.

1. Install 5 inner base panels as shown.

2. On back of firebox wall—install 6 screws (loosely) in locations shown below. Install 3 back panels—hang panels on installed screws through keyhole opening.

3. Install panel bracket into the slot in the panel.

4. Slide the panel and bracket into the unit until it contacts the back panel.

5. Secure panel in position with one screw.

6. Repeat steps 2-4 to install opposite panel.

7. Reverse steps to remove panels.

**Outer Panels**

1. Install 3 front outer panels as shown below.

2. Slide the glass barrier stopper bracket in between the front panel and the unit wall as shown.

3. Install side outer panels by manoeuvering the panel between the wall and the barrier stopper bracket as shown below. The panels are held in place by magnets.

Turn off gas and power to unit and allow to cool to room temperature.

Remove the safety glass and firebox glass — see manual for instructions.

1. **Install 5 inner base panels as shown.**

2. **On back of firebox wall—install 6 screws (loosely) in locations shown below. Install 3 back panels—hang panels on installed screws through keyhole opening.**

3. **Install panel bracket into the slot in the panel.**

4. **Slide the panel and bracket into the unit until it contacts the back panel.**

5. **Secure panel in position with one screw.**

6. **Repeat steps 2-4 to install opposite panel.**

7. **Reverse steps to remove panels.**
Enamel Panel Installation

### Black Enamel Panels — Handling Instructions

- Black Enamel panels must be inspected for scratches and dimples prior to installation. Claims for damage after installation will not receive consideration.
- Black Enamel panels will discolor a little during normal operation. This is normal and should not be considered a defect.

*All hand and finger marks **MUST** be cleaned off with a soft cloth. Use an ammonia based cleaner (ie. glass cleaner) to remove any fingerprints before applying heat to the unit. **Failure to do this will result in burn stain on panels which you will be unable to remove.**

Not protected by product warranty.

The CV72E may be equipped with optional enamel inner panels.
CV72E - 5 outer panels and 10 inner panels.

Turn off power and gas to unit and allow to cool to room temperature. Remove the safety glass and firebox glass — see manual for instructions

1. Install 5 inner base panels as shown.

2. On back of firebox wall -- install 8 screws (loosely) in locations shown below. Install 3 back panels -- hang panels on installed screws through keyhole opening.

3. Install panel bracket into the slot in the panel.

4. Slide the panel and bracket into the unit until it contacts the back panel.

5. Secure panel in position with one screw.

6. Repeat steps 2-4 to install opposite panel.

7. Install 3 front outer panels as shown below.

8. Slide the glass barrier stopper bracket in between the front panel and the unit wall as shown.

9. Install side outer panels by maneuvering the bracket between the wall and the barrier stopper bracket as shown below. The panels are held in place by magnets.
Glass Panel Installation

1. Turn off power and gas to unit and allow to cool to room temperature. Remove the safety glass and firebox glass — see manual for instructions. **Note:** The screws to secure all of the clips in these instructions will be already be on the appliance. Simply remove and reinstall to secure all of the clips.

2. Identify panels and order of installation.

3. Install back corner panels (1, 2) - seat smallest panel in back left corner, repeat on other side.

4. Install bottom corner securing bracket as shown. Repeat step for other side.

5. Install the 3 front panels (3, 4, 5) into the front firebox panel.

6. Install two back panel brackets in between the back wall and the burner tray. Line up the center of each bracket with the base panels installed in the previous step as shown below.

7. Carefully manoeuvre the back glass panels (6, 7, 8) to the back wall of the firebox. Start with back panel 6 -- place two panel brackets on each panel and manoeuvre into position, sliding the bottom into the corner and back brackets.

8. Secure the top of the panel brackets with 2 screws into 2 brackets (each panel has 2 brackets).

9. Repeat Steps 7 & 8 to install back panels 7 + 8.

10. Install side panel 9 -- manoeuver into top and bottom brackets.
11. Secure side panel 9 with one screw on the top bracket as shown.

12. Repeat Step 10 and 11 on the other side to install panel 10.

13. Reinstall firebox glass panel -- see instructions in unit manual.

14. Install base panels 11, 12 and 13 in the front of the unit.

15. Slide the glass barrier stopper bracket in between the front panel and the unit wall as shown.

16. Install side outer panel (14) by manoeuvring the panel between the wall and the barrier stopper bracket as shown below. Repeat on other side to install panel 15. The panels are held in place by magnets.

17. Install barrier glass -- see unit manual for instructions.
Burner and Firebox Media Options

Spread the media evenly over the burner. Ensure the glass/stones do not overlap excessively as this will affect the flame pattern.

IMPORTANT NOTE:
Only the supplied approved media are to be used with these fireplaces. Use of any other type of glass or stones can alter the unit’s performance. Any damage caused by the use of any unapproved glass or stones will not be covered under warranty. When using Ceramic Spa/Volcanic Stones ensure required glass crystals/beads are used as a base. DO NOT overstack Ceramic Spa Stones or Volcanic Stones on burner or in the pilot area. Media must be installed on and around burner only in amounts noted below.

NOTE: Regardless of option chosen, fireglass must be installed on burner in all cases.

<table>
<thead>
<tr>

* Media not supplied with unit - must be purchased separately.

3/4” Black Coal + Black Fireglass

Natural / Ivory Stones + Fireglass

Black Fireglass + Embers

Spa Stones + Fireglass

Fireglass + Firebeads

Stone River Pebbles + Fireglass
Optional Driftwood Log Set Installation

Read the instructions below carefully and refer to the images. If the logs are broken do not use the unit until they are replaced. Broken logs can interfere with pilot operation.

Improper positioning of the logs may create carbon build-up and can alter the unit's performance which is not covered under warranty.

*Dark brown paint is included if touch ups are required.

1. Shut off gas and electrical supply, allow unit to cool to room temperature.
2. Remove barrier glass (if already installed) and firebox glass (see manual).
3. Carefully remove the logs from the packaging and unwrap them. The logs are fragile, handle with care—never force into position.
4. Install Black Fireglass (2lb) and glowing wool on the burner as shown below.
5. Clip on the log guides - position the rear guides by centering over the two vertical lines on either side of the pilot hood at the back of the burner. Install a second log guide on the 2nd vertical line right of the pilot hood.
6. Place Log 1 behind the burner. Log 1 will rest on the pilot hood and 2 center log guides. Line up the knot on the top of the log with the center of the pilot hood when seating.

7. Install Log 2 to the left of Log 1. Line up the left end of Log 2 with the last vertical line on the back of the burner as shown below.

8. Install Log 3 to the right of Log 1, rest the left side on the log guide and the right side on the glass crystals as shown.

9. Install Log 4 in front of the burner on the panel. Position the left end of Log 4 2-1/2" to the right of the left end of the burner as shown below.

10. The left end of Log 4 should also sit 2" from the edge of the panel as shown below.

11. Place Log 5 on the center panel in front of the burner. Position the left end of the log 17" from the left edge of the burner as shown below.

12. Place Log 6 on the diagonal--line up the center of Log 6 with the center vertical line at the front of the burner.
13. Install Log 7 on the diagonal--line up the left end of Log 7 with the 4th vertical line from the right on the front of the burner as shown below.

14. Install Log 8--the knot on the log should rest on the 2nd vertical line from the right at the front of the burner and the left end of the log should sit 1" from the edge of the panel. The right end of Log 8 should be 2-1/2" from the right edge of the burner.

15. Install one box (3.5lbs) of 3/4" black coal around the logs installed on the panels as shown below.

16. Install Log 9--line up the pin locator on Log 9 with the pin on Log 1 and rest the other end of Log 9 on the rest on Log 4 as shown below.

17. Install Log 10--line up the pin locator on Log 10 with the pin on Log 1 and rest the other end of Log 10 on the rest on Log 5 as shown below.

18. Install Log 11--line up the pin locator on Log 11 with the pin on Log 1 and rest the other end of Log 11 on the rest on Log 7 as shown below.

**Note:** Log 7 and Log 14 appear very similar. Log 7 has a landing for Log 11--Log 14 does not. Please carefully identify Log 7 before installing.

- Keep front secondary air inlets clear
- Do not completely cover side secondary air inlets
- Correct Black Coal placement

**Installation Tip:**
- Keep front secondary air inlets clear
- Do not completely cover side secondary air inlets
- Correct Black Coal placement
19. Install Log 12--line up the pin locator on Log 12 with the pin on Log 3 and rest the other end of Log 12 on the rest on Log 8 as shown below.

20. Install Log 13--rest the longer part of the 'Y' of Log 13 on the rest in Log 4. Rest the opposite end of Log 13 on the back edge of the burner as shown.

21. Install Log 14--place one end of Log 14 on the rest on Log 8 and the opposite end on the back edge of the burner as shown below.

22. Install Logs 15 and 16--place each log on the glass at each end of the burner as shown below.
Optional Birch Wood Log set Installation

Read the instructions below carefully and refer to the images. If the logs are broken do not use the unit until they are replaced. Broken logs can interfere with pilot operation.

Improper positioning of the logs may create carbon build-up and can alter the unit’s performance which is not covered under warranty.

*Paint is included if touch ups are required.

1. Shut off gas and electrical supply, allow unit to cool to room temperature.
2. Remove barrier glass (if already installed) and firebox glass (see manual).
3. Carefully remove the logs from the packaging and unwrap them.
   The logs are fragile, handle with care—never force into position.
4. Install Black Fireglass (2lb) and glowing wool on the burner as shown below.
5. Clip on the log guides - position the rear guides by centering over the two vertical lines on either side of the pilot hood at the back of the burner. Install a second log guide on the 2nd vertical line right of the pilot hood.

Log Brackets (3)
- Lava rock (purchased separately from log set)
- 2 lb Black Fireglass (purchased separately from log set)
- Glowing wool (supplied with unit)
- 3/4” Crushed black glass or iceburg chips (purchased separately from log set)
6. Place Log 1 behind the burner. Log 1 will rest on the pilot hood and 2 center log guides. Line up the knot on the top of the log with the center of the pilot hood when seating.

7. Install Log 2 to the left of Log 1. Line up the left end of Log 2 with the last vertical line on the back of the burner as shown below.

8. Install Log 3 to the right of Log 1, rest the left side on the log guide and the right side on the glass crystals as shown.

9. Install Log 4 in front of the burner on the panel. Position the left end of Log 4 2-1/2" to the right of the left end of the burner as shown below.

10. The left end of Log 4 should also sit 2" from the edge of the front panel.

11. Place Log 5 on the center panel in front of the burner. Position the left end of the log 17" from the left edge of the burner as shown below.

12. Place Log 6 on the diagonal--line up the centre of Log 6 with the center vertical line at the front of the burner.
13. Install Log 7 on the diagonal--line up the left end of Log 7 with the 4th vertical line from the right on the front of the burner as shown below.

14. Install Log 8--the knot on the log should rest on the 2nd vertical line from the right at the front of the burner and the left end of the log should sit 1” from the edge of the panel. The right end of Log 8 should be 2-1/2” from the right edge of the burner.

15. Install one box (3.5lbs) of 3/4” black coal around the logs installed on the panels as shown below.

16. Install Log 9--line up the pin locator on Log 9 with the pin on Log 1 and rest the other end of Log 9 on the rest on Log 4 as shown below.

17. Install Log 10--line up the pin locator on Log 10 with the pin on Log 1 and rest the other end of Log 9 on the rest on Log 5 as shown below.

18. Install Log 11--line up the pin locator on Log 11 with the pin on Log 1 and rest the other end of Log 11 on the rest on Log 7 as shown below.

Do not completely cover side secondary air inlets
Keep front secondary air inlets clear

Correct Black Coal placement - Driftwood logs shown
19. Install Log 12--line up the pin locator on Log 12 with the pin on Log 3 and rest the other end of Log 12 on the rest on Log 8 as shown below.

20. Install Log 13--rest the longer part of the ‘Y’ of Log 13 on the rest in Log 4. Rest the opposite end of Log 13 on the back edge of the burner as shown.

21. Install Log 14--place one end of Log 14 on the rest on Log 8 and the opposite end on the back edge of the burner as shown below.

22. Install Logs 15 and 16--place each log on the glass at each end of the burner as shown below.

Final Install
Optional Split Wood Log Set Installation

Read the instructions below carefully and refer to the images. If the logs are broken do not use the unit until they are replaced. Broken logs can interfere with pilot operation.

Improper positioning of the logs may create carbon build-up and can alter the unit’s performance which is not covered under warranty.

*Dark brown paint is included if touch ups are required.

1. Shut off gas and electrical supply, allow unit to cool to room temperature.
2. Remove barrier glass (if already installed) and firebox glass (see manual).
3. Carefully remove the logs from the packaging and unwrap them. The logs are fragile, handle with care—never force into position.
4. Install Black Fireglass (2lb) and glowing wool on the burner as shown below.
5. Clip on the log guides - position the rear guides by centering over the two vertical lines on either side of the pilot hood at the back of the burner. Install a second log guide on the 2nd vertical line right of the pilot hood.

6. Place Log 1 behind the burner. Log 1 will rest on the pilot hood and 2 center log guides. Line up the log with the center of the pilot hood when seating.

7. Install Log 2 to the left of Log 1. Line up the left end of Log 2 with the last vertical line on the back of the burner as shown below.

8. Install Log 3 to the right of Log 1, rest the left side on the log guide and the right side on the glass crystals as shown.

9. Install Log 4 in front of the burner on the panel. Position the left end of Log 4 2-1/2" to the right of the left end of the burner as shown below.

10. The left end of Log 4 should also sit 2" from the edge of the panel as shown below.

11. Place Log 5 on the center panel in front of the burner. Position the left end of the log 17" from the left edge of the burner as shown below.

12. Place Log 6 on the diagonal—line up the centre of Log 6 with the center vertical line at the front of the burner.

13. Install Log 7 on the diagonal—line up the left end of Log 7 with the 4th vertical line from the right on the front of the burner as shown below.
14. Install Log 8 - the left end of the log should sit 1" from the edge of the panel. The right end of Log 8 should be 2-1/2" from the right edge of the burner.

15. Install one box (3.5lbs) of 3/4" black coal around the logs installed on the panels as shown below.

16. Install Log 9—line up the pin locator on Log 9 with the pin on Log 1 and rest the other end of Log 9 on the rest on Log 4 as shown below.

17. Install Log 10—line up the pin locator on Log 10 with the pin on Log 1 and rest the other end of Log 10 on the rest on Log 5 as shown below.

18. Install Log 11—line up the pin locator on Log 11 with the pin on Log 1 and rest the other end of Log 11 on the rest on Log 7 as shown below.
19. Install Log 12--line up the pin locator on Log 12 with the pin on Log 3 and rest the other end of Log 12 on the rest on Log 8 as shown below.

20. Install Log 13--rest the longer part of the ‘Y’ of Log 13 on the rest in Log 4. Rest the opposite end of Log 13 on the back edge of the burner as shown.

21. Install Log 14--place one end of Log 14 on the rest on Log 8 and the opposite end on the back edge of the burner as shown below.

22. Install Logs 15 and 16--place each log on the glass at each end of the burner as shown below.

Final Install
Glass Barrier installation

1. Ensure fireplace is operating properly and all firebox glass, and liner panels are installed prior to installing the glass safety barrier.
2. Remove the protective peel from the glass safety barrier and clean the inner surface. Identify the hooks on the glass safety barrier, these indicate the inner surface.
3. Attach the vacuum clamps to the glass as shown on the outer surface. Press the vacuum clamps against the glass, then close the clamps while maintaining pressure on the glass.
4. Slide the corner protectors onto the bottom corners of the glass.

5. Holding the glass barrier in front of the unit, slide it up behind the top lip of the unit. Lift the barrier up as far as it goes, then hook the barrier onto the unit.

6. Visually inspect that the lower hooks are sitting over their pins and that the glass is sitting level and centered in the opening.
7. Remove vacuum clamps and corner protectors.
8. To remove glass, see owner's manual.

Glass barrier removal video
Glass Barrier Adjustment

If glass isn't hanging straight, use a phillips screwdriver to adjust the angle. Clockwise = angles barrier out toward you Counter clockwise = angles barrier in towards the unit.

Slide the screwdriver straight up at the two indicator slots.
Aeration Adjustment

The burner aeration is factory set but may need adjusting due to either the local gas supply or altitude. Open the air shutter for a blue flame or close for a more yellow flame.

**Note:** If the firebox glass, logs, inner panels, etc. are already installed, the aeration can be adjusted from outside the firebox.

1. Remove the centre access panel on the outer trim, if finishing material is already installed, remove the glass safety barrier and center outer panel--see instructions in this manual.

2. Loosen 2 screws on the aeration lever access door. Lift the door up and out to remove.

3. Attach the handle to the aeration lever through the access opening--handle will slide into position on the lever.

4. Adjust aeration accordingly. Pushing lever in -- closes the air shutter. Pulling the lever outward -- opens the air shutter.

**Minimum Air Shutter Opening:**

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

*Note:* Concerning any damage due to carboning resulting from improperly setting the aeration controls is NOT covered under warranty.

5. Remove the handle by lifting up and out--replace the access door and tighten the 2 screws. Hang the handle back onto the magnet.

6. Reverse Step 1.
Maintenance Instructions

1. Always turn off the gas valve before cleaning. For relighting, refer to lighting instructions. Keep the burner and control compartment clean by brushing and vacuuming at least once a year. When cleaning the logs, use a soft clean paint brush as the logs are fragile and easily damaged.

2. Clean appliance and door with a damp cloth (never when unit is hot). Never use an abrasive cleaner. The glass should be cleaned with a gas fireplace glass cleaner. The glass should be cleaned when it starts looking cloudy.

3. The fireplace is finished in a heat resistant paint and should only be refinished with heat resistant paint. Regency® uses StoveBright Paint-Metallic Black #6309.

4. Make a periodic check of burner for proper position and condition. Visually check the flame of the burner periodically, making sure the flames are steady, not lifting or floating. If there is a problem, call a qualified service person.

5. The appliance and venting system must be inspected before use, and at least annually, by a qualified field service person, to ensure that the flow of combustion and ventilation air is not obstructed.

Note: Never operate the appliance without the glass properly secured in place.

6. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

7. In the event this appliance has been serviced check that the vent-air system has been properly resealed & reinstalled in accordance with the manufacturer's instructions.

8. Verify operation after servicing.

Flame Pattern

Periodically check the pilot and main burner flames. Correct pilot flame pattern has two strong blue flames: 1 flowing around the flame sensor and 1 flowing across the burner (it does not have to be touching the burner).

Note: If you have an incorrect flame pattern, contact your Regency® dealer for further instructions.

Incorrect flame pattern will have small, probably yellow flames, not coming into proper contact with the rear burner or flame sensor.

Correct main burner flame pattern

General Vent Maintenance

Conduct an inspection of the venting system semi-annually. Recommended areas to inspect as follows:

1. Check the Venting System for corrosion in areas that are exposed to the elements. These will appear as rust spots or streaks, and in extreme cases, holes. These components should be replaced immediately.

2. Remove the Cap, and shine a flashlight down the Vent. Remove any bird nests, or other foreign material.

3. Check for evidences of excessive condensation, such as water droplets forming in the inner liner, and subsequently dripping out the joints. Continuous condensation can cause corrosion of caps, pipe, and fittings. It may be caused by having excessive lateral runs, too many elbows, and exterior portions of the system being exposed to cold weather.

4. Inspect joints, to verify that no pipe sections or fittings have been disturbed, and consequently loosened. Also check mechanical supports such as Wall Straps, or plumbers' tape for rigidity.

Log Replacement

The unit should never be used with broken logs. Turn off the gas valve and allow the unit to cool before opening door and carefully remove the logs. (The pilot light generates enough heat to burn someone.) If for any reason a log should need replacement, you must use the proper replacement log. The position of these logs must be as shown in the diagrams under Log Installation.

Note: Improper positioning of logs may create carbon build-up and will severely alter the unit's performance which is not covered under warranty.

Glass Gasket

If the glass seal on the appliance requires replacement a graphite seal specifically designed for this appliance is required. Part # is 666-124 for the sides with 2 required and part # 666-125 for the top/bottom with 8 required. These are supplied with self adhesive tape.

There is also gasket installed on each side of the inner glass to protect against breakage when installing the glass. Gasket part number is 836-222. This is sold per foot. 3 feet in total is required to complete both sides.

Glass

Your Regency® fireplace is supplied with high temperature 5mm-Tempered outer glass & 5mm-Ceramic Inner glass. If your glass requires cleaning, we recommend using an approved glass cleaner available at all authorized dealers. Do not use abrasive materials.

CAUTION & WARNINGS:

* Do not clean when the glass is hot.
* The use of substitute glass will void all product warranties.
* Care must be taken to avoid breakage of the glass.
* Do not strike or abuse the glass.
* Do not operate this fireplace without the glass front or with a cracked or broken glass front.
* Wear gloves and safety glasses when removing damaged or broken glass.
* Replacement of the glass panels should be done by a licensed or qualified service person.

Glass replacement

In the event that you break your glass by impact, purchase your replacement from an authorized Regency dealer only. Replacement glass is shipped already installed into the door frame. Reinstall as per Glass Installation in the “Glass Installation” section.

REPLACEMENT GLASS:

Outer Safety Glass- Tempered (Part#940-490/P)
Inner Glass - Ceramic (Part#940-450/P)
Valve Replacement

**Important:** Always shut off gas supply/120 volt power prior to servicing the gas valve.

1. Turn off unit and allow to cool to room temperature.

2. Remove outer enamel or steel panels—see instructions in the panel removal section in this manual.

3. Remove outer safety (barrier) and inner glass (firebox glass)—see instructions in this manual.

4. Remove all media and logs (if installed) — set aside.

5. Remove inner base panels—see panel section in this manual.

6. Bend the arm of the aeration lever bracket up from 90° to straighten and release aeration lever (lever will come with the burner).

7. Remove the trim cover on right side of burner by lifting off. Also remove the burner surround by sliding to the left and lifting off.

8. Loosen 8 screws in locations shown below (2 at front and 2 at rear)—slide burner to the left away from the orifice and lift out.

9. Remove 8 screws in locations shown below.

10. Lift valve tray out partially and disconnect flexible gas connection on the valve inlet side, remove valve tray—replace with new valve tray.

11. Reverse Steps 7-1 to complete.
End of Line Power Vent Maintenance

External Power Vent Access

1. Remove 4 screws located around inner trim (Diagram 1).

2. Loosen 4 screws (Diagram 2) and slide shield up and out. Once access has been made into power vent housing, you can remove the pressure switch and fan motor.

3. Remove the pressure switch by disconnecting red and blue wires from pressure switch (Diagram 3) Disconnect Hose from underside of pressure switch (Diagram 4)

4. Loosen (1) one Phillips head screw securing the pressure switch to the power vent housing (Diagram 5) once the pressure switch is free from the Housing unit, it is possible to replace the pressure switch by removing (1) one Phillips head screw holding the pressure switch to mounting bracket (Diagram 6).

Replacing the power vent motor:

1. Turn off power supply.

2. Loosen 6 x 1/4" hex screws slightly.

3. Turn power vent motor counter clockwise and lift out (Diagram 7).

4. Disconnect power to the motor by disconnecting black and black wire and white and black wire (Diagram 8). The power vent motor is now free from the unit.

5. Loosen 4 screws and slide shield up and out (Diagram 2). Once access to the power vent housing is achieved, you can remove the pressure switch and fan motor.

6. Remove the pressure switch by disconnecting the red and blue wires from the pressure switch (Diagram 3)

7. Disconnect the hose from the underside of the pressure switch (Diagram 4). Loosen one Phillips head screw holding the pressure switch to the power vent housing (Diagram 5). Once the pressure switch is free from the housing it is possible to replace the pressure switch by removing one Phillips head screw holding the pressure switch to mounting bracket. (Diagram 6)

8. To replace the power vent motor, first turn off the power supply, then slightly loosen 6 x 1/4" hex screws. Turn the power vent motor counter clockwise and pull it out (Diagram 7).

9. Disconnect the power to the motor by disconnecting the black and black wire and the white and black wire (Diagram 8). The power vent motor is now free.
End of Line Power Vent Maintenance
Internal Power Vent Access

Note: May only be accessed if an access panel was installed for servicing from inside.

1. Turn off the power.

2. Remove 8 Phillips head screws from the rear of the power vent (see Diagram 1).

3. Slide the power vent housing out through the back as shown in Diagram 2.

4. Turn the power vent over to the front side (Diagram 3).

5. Follow Steps 1-9 on previous page.
Power Vent Maintenance - External Power Vent Access

Inline Power Vent

1. Remove 4 screws from the cover plate.

2. Remove the pressure switch by disconnecting its red and blue wires (Diagram 2). The longest silicone tube is connected to the pressure switch side labelled "P" and the shorter silicone tube is connected to the side labelled "V".

3. Loosen the 2 screws securing the pressure switch bracket to the power vent bracket mount (Diagram 3). Once the pressure switch is free, it is possible to replace it by removing (1) one Phillips head screw holding the pressure switch to the mounting bracket (Diagram 4).

4. Disconnect power to motor by disconnecting black and black wire and white and black wire (Diagram 6) power vent motor is now free from the unit.

Replacing the power vent motor:

1. Turn off power supply.

2. Loosen 6 x 1/4" hex screws slightly.

3. Turn power vent motor counter-clockwise and lift out. (Diagram 5)
Gas Maintenance - Recommended Annual Routine

In order for your Regency appliance to continue to provide comfort to your home periodic maintenance must be performed to ensure it is operating at peak efficiency. The items in the list should be checked by a licensed gas service technician during the annual service check. Your unit may require more frequent maintenance checks if you notice any changes in how it operates. Operational changes to look for can include, but are not limited to, extended start up time, increased fan noise, residue/carbon build up, white build up on the glass/firebox, increased operating noise etc. Should any of these or other conditions arise, discontinue use and schedule a service check with your local licensed gas technician. The list below shows items your licensed service technician will need to check and service at least annually.

Limited Lifetime Warranty

FPI Fireplace Products International Ltd. (for Canadian customers) and Fireplace Products U.S., Inc. (for U.S. customers) (collectively referred to herein as “FPI”) extends this Limited Lifetime Warranty to the original purchaser of this appliance provided the product remains in the original place of installation. The items covered by this limited warranty and the period of such coverage is set forth in the table below.

Some conditions apply (see below).

The policy is not transferable, amendable or negotiable under any circumstances.

Conditions:

Warranty protects against defect in manufacture or FPI factory assembled components only, unless herein specified otherwise.

Any part(s) found to be defective during the warranty period as outlined above will be repaired or replaced at FPI’s option through an accredited distributor, dealer or pre-approved and assigned agent provided that the defective part is returned to the distributor, dealer or agent for inspection if requested by FPI. Alternatively, FPI may at its own discretion fully discharge all of its obligations under the warranty by refunding the verified purchase price of the product to the original purchaser. The purchase price must be confirmed by the original Bill of Sale.

The authorized selling dealer, or an alternative authorized FPI dealer if pre-approved by FPI, is responsible for all in-field diagnosis and service work related to all warranty claims. FPI is not responsible for results or costs of workmanship of unauthorized FPI dealers or agents in the negligence of their service work.
At all times FPI reserves the right to inspect reported complaints on location in the field claimed to be defective prior to processing or authorizing of any claim. Failure to allow this upon request will void the warranty.

All warranty claims must be submitted by the dealer servicing the claim, including a copy of the Bill of Sale (proof of purchase by you). All claims must be complete and provide full details as requested by FPI to receive consideration for evaluation. Incomplete claims may be rejected.

Unit must be installed according to all manufacturers’ instructions as per the manual.

All Local and National required codes must be met.

The installer is responsible to ensure the unit is operating as designed at the time of installation.

The original purchaser is responsible for annual maintenance of the unit, as outlined in the owner’s manual. As outlined below, the warranty may be voided due to problems caused by lack of maintenance.

Repair/replacement parts purchased by the consumer from FPI after the original coverage has expired on the unit will carry a 90 day warranty, valid with a receipt only. Any item shown to be defective will be repaired or replaced at our discretion. No labor coverage is included with these parts

**Exclusions:**
This Limited Lifetime Warranty does not extend to paint, rust or corrosion of any kind due to a lack of maintenance or improper venting, combustion air provision, corrosive chemicals (i.e. chlorine, salt, air, etc.), door or glass gasketing.

Malfunction, damage or performance based issues as a result of environmental conditions, location, chemical damages, downdrafts, installation error, installation by an unqualified installer, incorrect chimney components (including but not limited to cap size or type), operator error, abuse, misuse, use of improper fuels, lack of regular maintenance and upkeep, acts of God, weather related problems from hurricanes, tornados, earthquakes, floods, lightning strikes/bolts or acts of terrorism or war, which result in malfunction of the appliance are not covered under the terms of this Limited Lifetime Warranty.

FPI has no obligation to enhance or modify any unit once manufactured (i.e. as products evolve, field modifications or upgrades will not be performed on existing appliances).

This warranty does not cover dealer travel costs for diagnostic or service work. All labor rates paid to authorized dealers are subsidized, pre-determined rates. Dealers may charge homeowner for travel and additional time beyond their subsidy.

Any unit showing signs of neglect or misuse will not be covered under the terms of this warranty policy and may void this warranty. This includes units with rusted or corroded fireboxes which have not been reported as rusted or corroded within three (3) months of installation/purchase.

Units which show evidence of being operated while damaged, or with problems known to the purchaser and causing further damages will void this warranty.

Units where the serial no. has been altered, deleted, removed or made illegible will void this warranty.

Minor movement, expansion and contraction of the steel is normal and is not covered under the terms of this warranty.

FPI is not liable for the removal or replacement of facings or finishing in order to repair or replace any appliance in the field.

Freight damages for products or parts are not covered under the terms of the warranty.

Products made or provided by other manufacturers and used in conjunction with the FPI appliance without prior authorization from FPI may void this warranty.
**Limitations of Liability:**
The original purchaser’s exclusive remedy under this warranty, and FPI’s sole obligation under this warranty, express or implied, in contract or in tort, shall be limited to replacement, repair, or refund, as outlined above. IN NO EVENT WILL FPI BE LIABLE UNDER THIS WARRANTY FOR ANY INCIDENTAL OR CONSEQUENTIAL COMMERCIAL DAMAGES OR DAMAGES TO PROPERTY. TO THE EXTENT PERMITTED BY APPLICABLE LAW, FPI MAKES NO EXPRESS WARRANTIES OTHER THAN THE WARRANTY SPECIFIED HEREIN. THE DURATION OF ANY IMPLIED WARRANTY IS LIMITED TO DURATION OF THE EXPRESSED WARRANTY SPECIFIED ABOVE. IF IMPLIED WARRANTIES CANNOT BE DISCLAIMED, THEN SUCH WARRANTIES ARE LIMITED IN DURATION TO THE DURATION OF THIS WARRANTY.

Some U.S. states do not allow limitations on how long an implied warranty lasts, or allow exclusion or limitation of incidental or consequential damages, so the above limitations or exclusions may not apply to you.

Customers located outside the U.S. should consult their local, provincial or national legal codes for additional terms which may be applicable to this warranty.

**How to Obtain Warranty Service:**
Customers should contact the authorized selling dealer to obtain warranty service. In the event the authorized selling dealer is unable to provide warranty service, please contact FPI by mail at the address listed below. Please include a brief description of the problem and your address, email and telephone contact information. A representative will contact you to make arrangements for an inspection and/or warranty service.

**Canadian Warrantor:**
FPI Fireplace Products International Ltd.
6988 Venture St.
Delta, British Columbia
Canada, V4G 1H4

**U.S. Warrantor:**
Fireplace Products U.S., Inc.
PO Box 2189 PMB 125
Blaine, WA
