MODELS: U32-NG3 Natural Gas  U32-LP3 Propane

WARNING:
Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to this manual. For assistance or additional information consult an authorized installer, service agency or the gas supplier.

FOR YOUR SAFETY
Do not store or use gasoline or other flammable vapours and liquids in the vicinity of this or any other appliance.

Installation and service must be performed by an authorized installer, service agency or the gas supplier.

FOR YOUR SAFETY
What to do if you smell gas:
- Do not try to light any appliance
- Do not touch any electrical switch: do not use any phone in your building.
- Immediately call your gas supplier from a neighbour's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.

Installer: Please complete the details on the back cover and leave this manual with the homeowner.
Homeowner: Please keep these instructions for future reference.
TO THE NEW OWNER

Congratulations! You are the owner of a state-of-the-art Gas Insert by FPI.

The FPI Gas Insert Series of hand crafted appliances has been designed to provide you with all the warmth and charm of a fireplace, at the flick of a switch. The models U32-NG3 and U32-LP3 of this series have been approved by Warnock Hersey for both safety and efficiency. As it also bears our own mark, it promises to provide you with economy, comfort and security for many trouble free years to follow.

Please take a moment now to acquaint yourself with these instructions and the many features of your FPI Fireplace.

Note: Oversize faceplate is 44” x 28”

INFORMATION FOR MOBILE/MANUFACTURED HOMES AFTER FIRST SALE

This FPI product has been tested and listed by Warnock Hersey as a Direct Vent Wall Furnace to the following standards: CAN/CGA-2.17-M91, and ANSI Z21.88b-2003/CSA 2.33b-2003.

This Direct Vent System Appliance must be installed in accordance with the manufacturer’s installation instructions and the Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280, or the current Standard of Fire Safety Criteria for Manufactured Home Installations, Sites, and Communities ANSI/NFPA 501A, and with CAN/CSA Z240-MH Mobile Home Standard in Canada. See page 6 for additional requirements.

This appliance installation must comply with the manufacturer’s installation instructions and local codes, if any. In the absence of local codes follow the current National Fuel Gas Code, ANSI Z223.1 and the current National Electrical Code ANSI/NFPA 70 in the U.S.A., and the current CAN/CGA B149 Gas Installation Code and the current Canadian Electrical Code CSA C22.1 in Canada.

This FPI Mobile/Manufactured Home Listed appliance comes factory equipped with a means to secure the unit.

This FPI Mobile/Manufactured Home listed appliance comes equipped with a dedicated #8 ground lug to which an 18 gauge copper wire from the steel chassis ground must be attached.

We recommend that our products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) or in Canada by Wood Energy Technical Training (WETT).

This is a copy of the labels that accompany each U32-3 Gas Insert. We have printed a copy of the contents here for your review. The safety label is located on a plate inside the base of the unit visible when the bottom louver is opened.

NOTE: FPI units are constantly being improved. Check the label on the unit and if there is a difference, the label on the unit is the correct one.

### SAFETY LABEL

Tented Gas Fireplace Heater

TESTED TO:
- CSA 2.33b-2003

Certified for / Certifiée pour: CANADA AND U.S.A.

Report No. 476-1497-00 (Jul. 2000)

**NATURAL GAS FIREPLACE INSERT: MODEL U32-NG3**

- **Factory Equipped For Altitude 0-4500ft. (0-1370m)**
  - Min. supply pressure: 5" WC (1.25 kpa)
  - Low Setting Man. pressure: 1.1" WC (0.27 kpa)
  - Max. Manifold pressure: 3.8" WC (0.95 kpa)
  - Orifice size: 37 DMS
  - Minimum input: 15,300 Btu/h (4.48 kW)
  - Maximum input: 30,000 Btu/h (8.79 kW)

**PROPAINE GAS FIREPLACE INSERT: MODEL U32-LP3**

- **Factory Equipped For Altitude 0-4500ft. (0-1370m)**
  - Min. supply pressure: 12" WC (2.99 kpa)
  - Low Setting Man. pressure: 2.9" WC (0.72 kpa)
  - Max. Manifold pressure: 11" WC (2.74 kpa)
  - Orifice size: 52 DMS
  - Minimum input: 15,000 Btu/h (4.48 kW)
  - Maximum input: 30,000 Btu/h (8.79 kW)

**Minimum Clearances to Combustibles from Insert**

- Side wall: A 10" (255mm)
- Ceiling: B 47-1/2" (1205mm)
- Alcove Width: K 48" (1220mm)
- Max. Alcove Depth: L 36" (915mm)

**Non-Combustible Hearth Extension**

- Hearth height: H 6" (150mm)
- Hearth depth: I 16" (405mm)
- Hearth width: J 40" (1015mm)

**Mantel Clearances with Bay & Flush Louvers in Masonry Fireplace installation**

- Mantel width: M 12" (305mm)
- Mantel height: N 17" (432mm)
- Mantel width: O 3-1/2" (89mm)
- Mantel height: P 13" (330mm)
- Floor to top of unit: Q 20" (508mm)

**WARNING:**

This fireplace has been converted for use with a gas fireplace insert only and cannot be used for burning wood or solid fuels unless all original parts have been replaced, and the fireplace re-approved by the authority having jurisdiction. This vented gas fireplace heater is not for use with air filters.

For installation in Solid Fuel Burning Fireplaces. This appliance must be installed in accordance with local codes, if any. If not, follow ANSI Z223.1 / CAN T-1-149

For Manufactured Home Installation: This Direct Vent System Appliance must be installed in accordance with the manufacturer’s installation instructions and Manufactured Home Construction and Safety Standard Title 24 CFR, Part 3280, or the current Standard for Fire Safety Criteria for Manufactured Home Installation, Sites, and Communities ANSI/NFPA 501A, and with CAN/CGA Z240 MH Mobile Home Standard in Canada.

**Electrical Supply:**

115 V, 55 WATTS, 60 Hz

**NOT FOR USE WITH SOLID FUELS**

FPI Fireplace Products
International Ltd.,
Delta BC, CANADA

**MADE IN CANADA / FABRIQUE AU CANADA**

For the State of Massachusetts, installation and repair must be done by a plumber or gasfitter licensed in the Commonwealth of Massachusetts.

For the State of Massachusetts, flexible connectors shall not exceed 36 inches in length.

For the State of Massachusetts, the appliances individual manual shut-off must be a t-handle type valve.
Electrical:
4,500’ (0-1370m).

Fuels:
Approved as is for use at 0’ to 1/2 psig. (3.45 kPa).

Vent System:
Circulation Fan: Variable speed, 110 CFM.
Log Set: Ceramic fibre, 7 per set.
Vent System: 3” co-linear aluminum flex.

IMPORTANT: SAVE THESE INSTRUCTIONS
The FPI Gas Insert must be installed in accordance with these instructions. Carefully read all the instructions in this manual first. Consult the building authority having jurisdiction to determine the need for a permit prior to starting the installation.

NOTE: Failure to follow the instructions could cause a malfunction of the heater which could result in death, serious bodily injury, and/or property damage. Failure to follow these instructions may also void your fire insurance and/or warranty.

FOR YOUR SAFETY
This appliance requires air for proper combustion. Always provide adequate combustion and ventilation air. Follow instructions and information in CAN/CGA B149 (in Canada) or the National Fuel Gas Code ANSI Z223.1 (in the USA), regarding requirements for combustion and ventilation air.

SPECIFICATIONS
At pressures over 1/2 psig, the pipe to the unit must be disconnected.

Gas Input Capacity:
Natural Gas 30,000 Btu/h
Propane 30,000 Btu/h

Min. Input
Natural Gas 15,300 Btu/h
Propane 15,000 Btu/h

Fuels: Approved for use with both natural gas, and propane. Approved as is for use at 0’ to 4,500’ (0-1370m).

Electrical: 120V A.C. system.

Circulation Fan: Variable speed, 110 CFM.
Log Set: Ceramic fibre, 7 per set.
Vent System: 3” co-linear aluminum flex.

The efficiency rating of the appliance is a product thermal efficiency rating determined under continuous operating conditions and was determined independent of any installed system.

GAS PRESSURE TESTING
The appliance must be isolated from the gas supply piping system by closing its individual manual shut off valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psig. (3.45 kPa).

INSTALLATION INTO A SOLID FUEL BURNING FIREPLACE OR FACTORY BUILT FIREPLACE
The U32-3 Gas Inserts have been tested and approved to be vented into any masonry fireplace or approved solid fuel burning factory built fireplace that will allow the insert to physically fit into the firebox. Refer to page 6 for minimum fireplace clearances.

If the factory built fireplace* height is too low for your Insert, you may remove the smoke baffle plate, damper, refractory (firebricks), glass doors, screen rails, screen mesh and log grates from the factory built fireplace as long as these items are saved and are reinstalled in the event that the Insert is removed.

Smoke shelves, shields and baffles may be removed if attached by mechanical fasteners. If any part is removed it must not weaken the structural integrity of the factory built fireplace.

NOTE: Any alterations made to the listed solid fuel burning factory built fireplace may void the listing of the fireplace.

*Check with your local inspector before commencing with this installation.

BEFORE YOU START
Safe installation and operation of this appliance requires common sense, however, we are required by the Canadian Safety Standards and ANSI Standards to make you aware of the following:

General Safety Information
1) The appliance installation must conform with local codes or in the absence of local codes, with CAN/CGA B149 (in Canada) or the National Fuel Gas Code ANSI Z223.1 in the U.S.A. This appliance should be installed by a qualified gas fitter technician only.

2) Installation and repair should be done by a qualified service person.

3) The appliance should be inspected before use and at least annually by a professional service person. More frequent cleaning may be required due to excessive lint from carpeting, bedding material, animal hair, etc. It is imperative that control compartments, burners and circulating air passageways of the appliance be kept clean.

4) See general construction and assembly instructions. This appliance may only be installed in a vented, noncombustible fireplace.

5) This appliance is Listed for bedroom installations when used with a Listed Millivolt Thermostat. Some areas may have further requirements, check local codes before installation.

6) Always connect this insert to a vent system venting to the outside of the building envelope. Never vent to another room or inside a building. Make sure that the vent is properly sized and is of adequate height to provide the proper draft.

7) Inspect the venting system annually for blockage and any signs of deterioration.

8) Any glass removed for servicing must be replaced prior to operating the appliance.

9) To prevent injury, do not allow anyone who is unfamiliar with the operation to use the fireplace.

10) Due to high temperatures, the appliance should be located out of high traffic areas and away from furniture and draperies. Children and adults should be alerted to the hazards of high surface temperatures, especially the fireplace glass and gold trims, and should stay away to avoid burns or clothing ignition. Young children should be carefully supervised when they are in the same room as the appliance. Clothing or other flammable material should not be placed on or near the appliance.

Emissions from burning wood or gas could contain chemicals known to the State of California to cause cancer, birth defects or other reproductive harm.

INSTALLATION CHECKLIST
Before installing vent system ensure that the damper plate is open and secure to prevent the damper plate from falling down and crushing the liner.

The FPI Gas Insert is installed as listed below.
**MATERIALS REQUIRED**

No electrical power supply is required for the gas control to operate. A 120 Volt AC power cord is hooked up to the fan. Plug the 3 wire cord into a suitable receptacle. Do not cut the ground terminal off under any circumstances. When connected with 120 volts, the appliance must be electrically grounded in accordance with local codes, current version of CSA C22.1 (in Canada) or in the absence of local codes, with the National Electrical Code ANSI/NFPA 70-1987.

**NOTE:** This unit is equipped with a heat sensor thermodisc which will prevent the blower from operating until the unit reaches the correct temperature.

---

*Note: If you are installing the Molded Faceplate, the minimum fireplace dimensions as follows:

- **Width (at front):** 29” (737mm)
- **Depth:** 15” (381mm)

---

**MINIMUM FIREPLACE DIMENSIONS**

The minimum fireplace clearances & dimensions for the FPI gas insert are shown in the following diagrams:
GAS CONNECTION

GAS CONNECTION WARNING: Only persons licensed to work with gas piping may make the necessary gas connections to this appliance.

1) If the appliance is to be installed into an existing chimney system, thoroughly clean the masonry or factory built fireplace.

2) The appliance is provided with an opening on the left hand side of the control compartment. A 3/8" NPT gas supply pipe must be brought near this inlet hole.

3) Locate the center point where the vent will pass through the chimney above the appliance. Move the appliance into the exact location where it is to be installed. Ensure that the Insert is level.

VENTING

THE APPLIANCE MUST NOT BE CONNECTED TO A CHIMNEY FLUE SERVING A SEPARATE SOLID FUEL BURNING APPLIANCE.

This appliance is designed to be attached to two 3" (76mm) co-linear aluminium flex running the full length of the chimney. The flue length must be a minimum length of 8' (2.44m) and a maximum of 35' (10.7m). See chart below for minimum distances from roof. Periodically check that the vent is unrestricted.

Masonry chimneys may take various contours which the flexible liner will accommodate. However, keep the flexible liner as straight as possible, avoid unnecessary bending.

The Air Intake pipe must be attached to the inlet air collar of the termination cap.

Part # Description
948-305 3" Flex - 35 ft.
946-529 Co-linear DV Vertical Termination Cap
Co-linear DV Vertical Termination Cap #946-529

Alternate Approved Caps
980 Vertical Termination Cap
991 High Wind Cap
923GK 3" Co-linear Adaptor with flashing

In areas of consistently high winds, we recommend using the Simpson Dura-Vent System (923GK adapter and 991 high-wind cap).

FLUE LINER INSTALLATION

1) Cut the flex liner as required.

2) Mark the end of one liner to indicate Inlet.

3) Connect the other end of the above liner to the inlet side of the termination adaptor, seal connection with high temperature silicone. Secure with gear clamp.

4) Connect the 2nd liner to the exhaust side of the adaptor, seal connection with high temperature silicone. Secure with gear clamp.

5) Install flashing.

6) Insert both liners into chimney, passing through the damper opening.

7) Install termination cap.

8) Connect the marked end of the liner to the inlet air collar of the vent connector plate marked with an "I", seal connection with high temperature silicone. Secure with gear clamp.
1) Unwrap the brick pattern panels from the protective wrapping.

2) Remove the glass front if it is already installed, see page 11.

3) Put the rear brick panel flat against the back of the unit.

4) Before installing the side brick panels, loosen the screws for the brick tabs enough so that you can slide the brick tabs on to the screws easily but that the tabs are secure. For the location of the side brick tab screws see diagram 1.

5) Remove the brick tabs and slide the side brick panels into position. See diagram 1. Install the brick tabs. See diagram 2.

GAS INSERT
AERATION SYSTEM

The air shutter can be adjusted by moving the adjusting wire up or down. The wire is accessed through the bottom louver opening. Open the air shutter for a blue flame or close for a yellower flame. The burner aeration is factory set but may need adjusting due to either the local gas supply or altitude.

Minimum Air Shutter Opening:

<table>
<thead>
<tr>
<th></th>
<th>Natural Gas</th>
<th>Propane</th>
</tr>
</thead>
<tbody>
<tr>
<td>3/16”</td>
<td></td>
<td>1/4”</td>
</tr>
</tbody>
</table>

CAUTION: Carbon will be produced if air shutter is closed too much.

Note: any damage due to carboning resulting from improperly setting the aeration controls is NOT covered under warranty.

Note: Aeration Adjustment should only be performed by an authorized FPI Installer at the time of installation or service.

GAS PIPE
PRESSURE TESTING

The appliance must be isolated from the gas supply piping system by closing its individual manual shut-off valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psig (3.45 kPa). Disconnect piping from valve at pressures over 1/2 psig.

The manifold pressure is controlled by a regulator built into the gas control, and should be checked at the pressure test point.

NOTE: To properly check gas pressure, both inlet and manifold pressures should be checked using the valve pressure ports on the valve.

1) Make sure the valve is in the "OFF" position.

2) Loosen the "IN" and/or "OUT" pressure tap(s), turning counterclockwise with a 1/8" wide flat screwdriver.

3) Attach manometer to "IN" and/or "OUT" pressure tap(s) using a 5/16" ID hose.

4) Light the pilot and turn the valve to "ON" position.

5) The pressure check should be carried out with the unit burning and the setting should be within the limits specified on the safety label.

6) When finished reading manometer, turn off the gas valve, disconnect the hose and tighten the screw (clockwise) with a 1/8" flat screwdriver. Note: Screw should be snug, but do not over tighten.

NOTE: 1) Final gas connection should be made after unit is in place to avoid damage to line when pushing the unit into position.

2) Mill-pac may be used instead of high temperature silicone and screws may be used instead of gear clamps at connections of liner to inlet and vent collars.
LOG SET
INSTALLATION

Read the instructions below carefully and refer to the diagrams. If logs are broken do not use the unit until they are replaced. Broken logs can interfere with the pilot operation.

The gas log kit contains the following:

a) 02-43 Rear Log
b) 02-45 Front Right Log
c) 02-56 Middle Left Log
d) 02-46 Left Top Log
e) 02-47 Center Log
f) 02-48 Middle Right Log
g) 02-44 Front Left Log
h) Embers
i) Rockwool
j) Vermiculite

The "02" refer numbers (i.e. 02-43) are molded into the rear of each log.

1) Carefully remove the logs from the box and unwrap them. The logs are fragile, handle with care - do not force into position.

2) Sprinkle the vermiculite around the firebox base. Take some of the embers (approx. 1/3 of the bag) and sprinkle over the vermiculite.

3) Place Rear Log A)02-43 on the two pins on the rear log support.

4) Place Front Right Log B)02-45 on the two pins as shown.

5) Place the Middle Left Log C)02-56 on the two pins as shown.

6) Place the Left Top Log D)02-46 on the pin on Log C)02-56 and on top of the cutout on Log A)02-43.

7) Place the notch in Center Log E)02-47 over Log B)02-45 and across the cutout on Log A)02-43.

8) Position notch in Front Right Log F)02-48 on Log E)02-47 and push the bottom right edge against the bracket on the burner tray and the front edge of the rear burner.

Note: Install Optional Brick Panels prior to installing logs.
**FACEPLATE & TRIM INSTALLATION**

1) Lay the faceplate panels flat, face down on something soft so they don't scratch.

2) Take the top faceplate and align the holes in it with the holes in the side panels. Using the screws provided, attach from the top of the panel (the holes in the top panel are slightly larger than the holes in the side panel to facilitate easier installation). Diagram 1.

3) Using the connectors provided, join the left side trim (with the ON/OFF switch) to the top trim. Diagram 2. Connect the right side trim to the top trim.

4) Place the trim on the assembled faceplate panels, aligning the wire connections from the switches with the notch on the left side panel.

5) Connect the fan switch wires by taking the black and red wires with the male ends (in the grey harness) and connect them with the wire connectors from the fan speed control.

6) Connect the ON/OFF switch wires by taking the black and red wires with the female ends and connect them to the ON/OFF switch.

7) Tuck the wires into the faceplate to keep them away from the insert using the clip provided. Attach the clip to the rear of the faceplate to ensure that the wires do not touch the side of the unit. Diagram 3.

8) The power cord should be run behind the faceplate panel.

9) Attach the brass trim to the faceplate by drilling a 1/8” hole through into the faceplate using the hole in the trim as a guide. Fasten the trim to the faceplate panels using the plated screws. Diagram 4.

10) Attach the faceplate panels to the insert body using the 4 remaining black screws. Diagram 5.

**Hearth Trim Option:** Hearth Trim is an option that can be used to finish off the installation when the bottom of the fireplace is higher than the hearth or to raise the fireplace. Attach the Hearth Trim to the bottom of the faceplate side panels with the screws provided. See Diagram 1.

**Hint:** Don't tighten the screws down completely at this point, continue on with steps 3 and 4 and do a trial fit to the unit. Make any necessary adjustments and when it fits properly then tighten down the screws.

9) Place Front Left Log G)02-44 onto the 2 front pins as shown.

10) Place the embers and Rockwool on the exposed front burner tray.

11) Test fire to ensure proper light off (make sure flame flows smoothly from one end of burner to the other. If there is any flame hesitation, check that area for any blockage of the burner port.

12) Install flush glass and optional bay glass as per instructions in this manual.
11) Push the Regency logo plate into the two holes in the bottom left corner of the face-plate.

**STANDARD FLUSH DOOR**

The standard flush door comes with a black frame. To install the frame, simply hook the top door flange onto the top of the unit and swing the door towards the unit, diagram 1. Be careful that the glass gasket does not roll up; there must be a gap between the gasket and the door lip to ensure that the door sits securely on the unit. Diagram 2.

**OPTIONAL FLUSH TRIM**

Attach 2 round magnets to the back of the top trim piece and the other 2 to the bottom trim piece, then attach trim to the top and bottom of Flush door.

**OPTIONAL DOUBLE DOOR FIRE SCREEN**

1) Pull out the top louver.

2) Center the screen door and hook over the flush door.

3) Open the screen door(s) and secure the screen door to the flush door front with 2 clips on the bottom left and right side.

**FLUSH LOUVERS**

1) The top louver is held in place by friction fit, if the louver needs to be adjusted; bend the bracket out as shown in the diagram.
2) Install the Spring Hinges on the left and right side of the bottom of the Firebox using 2 screws per hinge.

3) Place the Bottom Louver near the hinge. Flip hinge over the Bottom Louver and secure using 3 screws.

**OPTIONAL BAY DOOR**

*The Bay louvers MUST be used with the Bay glass option.*

The optional Bay door is an overlay on the flush front. The standard flush door and glass must remain on the unit. Hook the top of the bay door over the flush door flange and swing the bottom against the bottom flange of the flush door. Press down on the Bay Bottom bracket and push in until it clips behind the bottom of the flush front.

Slide the valve extension knobs onto the valve knobs. Match each extension knob with the corresponding valve knob. **Extension knobs are for Bay Front installations only.**

**Removing Bay Door**

To remove only the Bay Door - use a screwdriver to unclip the Bay Bottom bracket from the flush door and then swing up and unhook from the top flush door flange.

To remove the Bay Door & the Flush Front together, pull the hook from the slot in the bottom door bracket under the unit (see Standard Flush Door instructions above). Then pull the Bay Door and Flush door out and lift off of the flange at the top of the unit.

**OPTIONAL BAY TRIM**

Attach 4 supplied magnets each to the back of the top and bottom trim pieces, and attach trim to the top and bottom of Bay door.

3) Slide the SIT valve extension knobs onto the valve knobs. Match the correct ext. knob with the valve knob.
1) Turn the unit off and allow it to cool to room temperature.

2) Unplug or disconnect power source to stove.

3) Remove glass front (see manual).

4) Remove logs and brick panels (if installed).

5) Remove the Grate by removing the screws on each side of the grate.

6) Remove the Burner Tray by removing the screws on each side of the tray. Push the tray to the left and lift up.

7) Remove burner orifice with 1/2" wrench and replace with the #52 orifice in the Kit.

8) Remove regulator from valve and replace with Propane regulator. See diagram 1.

9) Pull off the pilot cap to expose the pilot orifice.

10) Unscrew the pilot orifice with the allen key (provided) and replace with the LP pilot orifice in the kit.

11) Replace Burner Tray and reverse steps 5) to 1).

12) Place the red “Converted to Propane” sticker on top of the Natural Gas information on the Serial Number decal.

13) Adjust the burner aeration setting from 3/16" to 1/4" as required for the best flame picture.
1) Hold the full screen door up against the unit in order to make the following wire connections.

Pull the ON/OFF connector wires from the firebox and connect them to the switch.

Connect the fan switch wires with the wire connectors from the fan speed control. Place clips over wires and tuck into side trim.

2) Lift unit up slightly and push down on the corners of the Bottom Trim Bracket and slide under unit. Unit should touch tabs on Bottom Trim Bracket.

3) Completely secure the full screen door to the unit by securing 4 screws to the Left and Right Side Trims.

NOTE: When mounting the full screen door to the unit, the inside flange of the side trims are to fit over the inner side of the unit flange and **NOT** next to the outer side of the unit flange.
**4)** Install Spring Hinges on the Left and Right Side of the bottom of the firebox using 2 screws per hinge.

**5)** Place Bottom Frame near hinge. Flip hinge over Bottom Frame and secure with 3 screws.

**6)** The Top Frame is held in place by friction fit; if the frame needs to be adjusted, bend the bracket accordingly.

**7)** Install the Left and Right Side Screen Doors in the fully open position by placing over top of the hinges on the full screen door.

**8)** Close screen doors.

**NOTE:** If you find that the doors do not align properly, adjust the hinges on the door(s) by loosening them and adjust accordingly.
HAMPTON CAST FACEPLATE INSTALLATION

1) Lay the faceplate panels flat, face down on something soft so they don’t scratch.

2) Attach the side filler brackets to the left and right sides using 3 screws and washer per side.

NOTE: There are filler brackets specifically for each side. The way to differentiate this is that on the side of the brackets there are 2 mounting holes. The side where there is a 7/16” gap from the top of the bracket to the mounting hole, must face the top.

3) Attach the right and left cast sides to the top using 2 screws per side.

4) Use a measuring tape to ensure that the distance between the left and right side pieces is 28” (711mm).

5) Connect the ON/OFF switch wires by taking the black and red wires with the blue female ends thru the hole provided and connecting them to the ON/OFF switch.

6) Connect the fan switch wires by taking the black and red wires with the male ends (in the grey harness) thru the hole provided and connect them with the wire connectors from the fan speed control.

7) Insert wires into the strain relief and install into switch box assembly.

8) Place the switch box assembly over the boss on the rear left side piece and secure with one screw.

9) Tuck the wires into the faceplate to keep them away from the insert using the clip provided. Attach the clip to the rear of the faceplate to ensure that the wires do not touch the side of the unit.

10) The power cord should be run behind the faceplate panel.
11) Mount the cast faceplate panels onto the insert body, sliding the side filler brackets into the space between the glass and the firebox. Secure using the 4 remaining black screws, 2 per side.

12) To put on the Hampton logo, peel the sticker from the back of the logo and place it centered on the bottom left hand corner of the faceplate.

HAMPTON CAST FACEPLATE
GRILL INSTALLATION

Before the grills are installed, a grill stop bracket needs to be put in place.

1) The U32 grill stop bracket is installed in the bottom left corner just under the firebox as shown below.

2) Place top grill into brackets located inside top of firebox as shown.

U31 ONLY:
Install the glass trim by inserting the side hooks on the glass trim into the 4 slots between the faceplate and the glass. Push the glass trim down firmly with both hands to lock into place.

Note: The top louver should be placed with the curved cut-out facing up.

3) The bottom louver, shown in the diagram below, has 2 hinges that are attached to the lip on the bottom of the unit. Secure using 2 screws per hinge.
THE KENSINGTON FRONT INSTALLATION

1) Place the Kensington Front up against the unit, but do not secure. Make the following wire connections:

Connect the fan switch wires by taking the black and red wires with the male ends (in the grey harness) and connect them with the wire connectors from the fan speed control.

Connect the ON/OFF switch wires by taking the black and red wires with the female ends and connect them to the ON/OFF switch.

Tuck the wires into the faceplate to keep them away from the insert using the clip provided. Attach the clip to the rear of the faceplate to ensure that the wires do not touch the side of the unit.

The power cord should be run behind the faceplate panel.

2) Mount the Kensington Front onto the firebox by securing in place using 4 screws, 2 per side.

3) Slide the Tabs on the Blanking Plate into the slots located on Front and secure using 2 screws.
**THE KENSINGTON 2-PANEL DOOR INSTALLATION**

1) Install the Sub-Frame by hooking the top flange onto the top of the Glass Door and swing the Sub-Frame towards the unit. Pull out the hooks which already secure the Glass Door and place them thru the holes in the bottom of the Sub-Frame to secure both the Glass Door and Sub-Frame in place together.

2) Mount the 2-panel Door Frame to the flange on Sub-Frame, ensuring to line up holes. Secure using the 6 screws provided.

3) Hook the Left Side Screen Door to the Door Frame by placing the door hinges (top & bottom) over the pins on the Door Frame. Repeat for Right Side Screen Door.

*Note:* It will be easier to put the Screen Door in place by starting with the bottom hinge.

*Note:* If you find that the Left or Right Side Screen Door is lower then the other, use the spacer provided to help align the Doors.

The spacer is to be placed over the bottom pin before installing the Screen Door.
THE KENSINGTON 3-PANEL DOOR INSTALLATION

1) Install the Sub-Frame by hooking the top flange onto the top of the Glass Door and swing the Sub-Frame towards the unit. Pull out the hooks which already secure the Glass Door and place them thru the holes in the bottom of the Sub-Frame to secure both the Glass Door and Sub-Frame in place together.

2) Mount the 3-panel Screen Door / Frame Assembly to the flange on Sub-Frame, ensuring to line-up holes. Secure using the 4 screws provided.

OPTIONAL WALL THERMOSTAT

A wall thermostat may be installed if desired. Follow the wiring diagram below. FPI offers an optional programmable thermostat but any 250-750 millivolt rated non-anticipator type thermostat that is CSA, ULC or UL approved may be used.

**Thermostat Wire Table**

<table>
<thead>
<tr>
<th>Wire Size</th>
<th>Max. Length</th>
</tr>
</thead>
<tbody>
<tr>
<td>14 GA.</td>
<td>50 Ft.</td>
</tr>
<tr>
<td>16 GA.</td>
<td>32 Ft.</td>
</tr>
<tr>
<td>18 GA.</td>
<td>20 Ft.</td>
</tr>
<tr>
<td>20 GA.</td>
<td>12 Ft.</td>
</tr>
<tr>
<td>22 GA.</td>
<td>9 Ft.</td>
</tr>
</tbody>
</table>

**CAUTION**

Do not connect the millivolt wall thermostat wires to the 120V wires.

OPTIONAL REMOTE CONTROL

Use the FPI Remote Control Kit approved for this unit. Use of other systems may void your warranty.

The remote control kit comes with a hand held transmitter, a receiver and a wall mounting plate.

1) Choose a convenient location on the wall to install the receiver and the receptacle box (protection from extreme heat is very important). Run wires from the fireplace to that location. Use Thermostat Wire Table.

2) Connect the wires as per the wiring diagrams below.

**CAUTION**

Do not connect the millivolt remote control wires for to the 120V wires.

3) Install 3 AAA alkaline batteries in transmitter and 4 AA alkaline batteries in the receiver. Install the receiver and its cover in the wall. Switch the remote receiver to "remote" mode. The remote control is now ready for operation.

FINAL CHECK

Before leaving this unit with the customer, the installer must ensure that the appliance is firing correctly. This includes:

1) Clocking the appliance to ensure the correct firing rate (rate noted on label) at 15 minutes.

2) If required, adjusting the primary air to ensure that the flame does not carbon. First allow the unit to burn for 15 min. to stabilize.

3) Check for proper draft.

**CAUTION**

Any alteration to the product that causes sooting or carboning that results in damage to the exterior facia is not the responsibility of the manufacturer.
This heater does not require a 120V A.C. supply for operation. In case of a power failure, the burner switch and the optional remote control/thermostat will continue to operate. However, a 120V A.C. power supply is needed for the fan/blower operation.

Caution: Ensure that the wires do not touch any hot surfaces and are away from sharp edges.

WARNING:
Electrical Grounding Instructions
This appliance is equipped with a three pronged (grounding) plug for your protection against shock hazard and should be plugged directly into a properly grounded three-prong receptacle. Do not cut or remove the grounding prong from this plug.
OPERATING INSTRUCTIONS

Before operating this appliance, proceed through the following check list.

1) Read and understand these Instructions before operating this appliance.

2) Check to see that all wiring is correct and encased to prevent possible shock.

3) Check to ensure there are no gas leaks.

4) Make sure the glass door is in place. Never operate the appliance with the glass door removed.

5) Verify that all venting and the cap is unobstructed.

6) Verify log placement. If the pilot cannot be seen when lighting the unit - the logs or the embers have been incorrectly positioned.

7) The unit should never be turned off and on again without a minimum of a 60 second wait.

8) When lighting the appliance, the inside of the glass may fog up. This will burn off after a few minutes of operation.

DO NOT BURN THE APPLIANCE WITH THE GLASS ASSEMBLY REMOVED.

IMPORTANT: Gas cock knob cannot be turned from "PILOT" to "OFF" unless it is partially depressed.

1) Open the bottom louver assembly

2) If the control knob is in the "OFF" position proceed to Step 5.

3) Push in gas control knob slightly and turn clockwise to "OFF". Knob cannot be turned from "PILOT" to "OFF" unless knob is pushed in slightly. Do not force.

4) Wait five minutes to allow gas, that may have accumulated in the main burner compartment, to escape. If you do smell gas, follow the instructions on the front of this manual. If you don't smell gas continue on to the next step.

5) Turn the gas control counter clockwise to "PILOT".

6) Push in control knob all the way and hold in. Continually push and release the black button on spark igniter until pilot lights. Continue to hold the control knob in for approximately one minute, then release the gas control knob. The pilot flame should continue to burn. If the pilot does not remain lit, repeat operation allowing a longer period before releasing gas control knob.

7) Turn gas control knob counter clockwise to "ON".

8) Use the rocker switch to operate main burner.

9) Rotate the variable flame control to adjust the flame height higher or lower.

10) Close the bottom louver assembly.

SHUTDOWN PROCEDURE

1) Use the rocker switch to turn off the main burner.

2) Open the bottom louver assembly.

3) Push in the gas control knob slightly and turn clockwise to "OFF". Do not force.

4) Disconnect all electric power and gas to the appliance if service is to be performed.

FIRST FIRE

The first fire in your stove is part of the paint curing process. To ensure that the paint is properly cured, it is recommended that you burn your fireplace for at least four (4) hours the first time you use it with the fan on. When first operated, the unit will release an odour caused by the curing of the paint, the burning off of any oils remaining from manufacturing. Smoke detectors in the house may go off at this time. Open a few windows to ventilate the room for a couple of hours.

The glass panel may require cleaning after the unit has cooled down. DO NOT ATTEMPT TO CLEAN THE GLASS WHILE IT IS HOT.

Note: When the glass is cold and the appliance is lit, it may cause condensation and fog the glass. This condensation is normal and will disappear in a few minutes as the glass heats up.

DO NOT BURN THE APPLIANCE WITHOUT THE GLASS FRONT IN PLACE.

During the first few fires, a white film may develop on the glass front as part of the curing process. The glass should be cleaned or the film will bake on and become very difficult to remove. Use a non-abrasive cleaner and NEVER clean the glass while it is hot.

AUTOMATIC CONVECTION FAN OPERATION

The fan operates automatically, turn the knob on the side of the faceplate to adjust to the desired speed. The fan will turn on as the stove comes up to operating temperature. After the unit has been turned off and the unit cooled to below a useful heat output range the fan will shut off automatically.

NORMAL OPERATING SOUNDS OF GAS APPLIANCES

It is possible that you will hear some sounds from your gas appliance. This is perfectly normal due to the fact that there are various gauges and types of steel used within your appliance. Listed below are some examples. All are normal operating sounds and should not be considered as defects in your appliance.

Blower: FPI gas appliances use high tech blowers to push heated air farther into the room. It is not unusual for the fan to make a "whirring" sound when ON. This sound will increase or de-
crease in volume depending on the speed setting of your fan speed control.

**Burner Tray:**
The burner tray is positioned directly under the burner tube(s) and logs and is made of a different gauge material from the rest of the firebox and body. Therefore, the varying thicknesses of steel will expand and contract at slightly different rates which can cause "clicking" and "cracking" sounds. You should also be aware that as there are temperature changes within the unit these sounds will likely re-occur. Again, this is normal for steel fireboxes.

**Blower Thermodisc:**
When this thermally activated switch turns ON it will create a small "clicking" sound. This is the switch contacts closing and is normal.

**Pilot Flame:**
While the pilot flame is on it can make a very slight "whisper" sound.

**Gas Control Valve:**
As the gas control valve turns ON and OFF, a dull clicking sound may be audible, this is normal operation of a gas regulator or valve.

**Unit Body/Firebox:**
Different types and thicknesses of steel will expand and contract at different rates resulting in some "cracking" and "clicking" sounds will be heard throughout the cycling process.

**MAINTENANCE INSTRUCTIONS**

1) Always turn the gas valve to off before cleaning. For relighting, refer to lighting instructions. Keep the burner and control compartment clean by brushing and vacuuming at least once a year. When cleaning the logs, use a clean soft paint brush as the logs are fragile and easily damaged.

2) Clean (never when unit is hot) appliance, door and louvers with a damp cloth. Never use an abrasive cleaner. The gold louvers (and optional gold door) may be scratched if abrasives are used to clean them. The heater is finished in a heat resistant paint and should only be refinished with heat resistant paint (not with wall paint). FPI uses StoveBrite Paint - Metallic Black #6309.

3) Make a periodic check of burner for proper position and condition. Visually check the flame of the burner periodically, making sure the flames are steady; not lifting or floating. If there is a problem, call a qualified service person.

4) The appliance and venting system must be inspected before use, and at least annually, by a qualified field service person, to ensure that the flow of combustion and ventilation air is not obstructed. During the annual service call, the burners should be removed from the burner tray and cleaned. Replace the embers but do not block the pilot.

5) Keep the area near the appliance clear and free from combustible materials, gasoline and other flammable vapors and liquids.

---

**COPY OF LIGHTING INSTRUCTION PLATE**

**FOR YOUR SAFETY READ BEFORE LIGHTING**

This appliance must be installed in accordance with local codes, if any; if none, follow the National Fuel Gas Code, ANSI Z223.1/NEPA 54, or Natural Gas and Propane Installation Codes, CSA B149.1. (Australia: AG601, New Zealand: NZS 5621)

**WARNING:** If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life. Improper installation, service or maintenance can cause injury or property damage. Refer to the owner’s information manual provided with this appliance. For assistance or additional information consult a qualified installer, service agency or gas supplier.

A) This appliance has a pilot which must be lighted by hand, following the instructions below exactly.

B) **BEFORE LIGHTING** smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

**WHAT TO DO IF YOU SMELL GAS**
- Do not try to light any appliance
- Do not touch any electric switch, do not use any phone in your building
- Immediately call your gas supplier from a neighbors phone. Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

C) Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don’t try to repair it, call a qualified service technician. Force or attempted repair may result in a fire or explosion.

D) Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water. This appliance needs fresh air for safe operation and must be installed so there are provisions for adequate combustion and ventilation air.

**CAUTION:** Hot while in operation. Do not touch. Severe Burns may result. Due to high surface temperatures keep children, clothing and furniture, gasoline and other liquids having flammable vapors away. Keep burner and control compartment clean. See installation and operating instructions accompanying appliance.

**LIGHTING INSTRUCTIONS**

STOP! Read the safety information above on this label.

1) Push in gas control knob slightly and turn clockwise to "OFF". Knob cannot be turned from “PILOT” to “OFF” unless knob is pushed in slightly. Do not force.

2) Wait five (5) minutes to clear out any gas. If you then smell gas STOP! follow “B” in the safety information above on this label. If you don’t smell gas, go to the next step.

3) Turn knob on gas control counterclockwise to "PILOT", immediately.

4) Push in control knob all the way and hold in. Immediately push black button on spark igniter until pilot lights. Continue to hold the control knob in for about 1/2 minute after the pilot is lit.

**TO TURN OFF GAS APPLIANCE**

1) Push in the gas control knob slightly and turn clockwise to "OFF". Do not force.

2) Turn off all electric power to the appliance if service is to be performed.

**DO NOT REMOVE THIS INSTRUCTION PLATE**

---

**CAUTION:** ANY SAFETY SCREEN OR GUARD REMOVED FOR SERVICING AN APPLIANCE MUST BE REPLACED PRIOR TO OPERATING THE APPLIANCE.

CLOTHING OR OTHER FLAMMABLE MATERIAL SHOULD NOT BE PLACED ON OR NEAR THE APPLIANCE.

**WARNING:** CHILDREN AND ADULTS SHOULD BE ALERTED TO THE HAZARDS OF HIGH SURFACE TEMPERATURE AND SHOULD STAY AWAY TO AVOID BURNS OR CLOTHING IGNITION. YOUNG CHILDREN SHOULD BE CAREFULLY SUPERVISED WHEN THEY ARE IN THE SAME ROOM AS THE APPLIANCE.
MAINTENANCE

6) Each time the appliance is lit, it may cause condensation and fog the glass. This condensation and fog is normal and will disappear in a few minutes as the glass heats up.

Never operate the appliance without the glass properly secured in place or with the door open.

7) Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

8) Periodically check the pilot flames. Correct flame pattern has three strong blue flames: 1 flowing around the thermopile and 1 around the thermocouple, and 1 flowing across the rear of the burner (it does not have to be touching the burner).

GENERAL VENT MAINTENANCE

Conduct an inspection of the venting system semi-annually. Recommended areas to inspect as follows:

1) Check the Venting System for corrosion in areas that are exposed to the elements. These will appear as rust spots or streaks, and in extreme cases, holes. These components should be replaced immediately.

2) Remove the Termination Cap, and shine a flashlight down the Vent. Remove any bird nests, or other foreign material.

3) Check for evidences of excessive condensation, such as water droplets forming in the inner liner, and subsequently dripping out the joints. Continuous condensation can cause corrosion of caps, pipe, and fittings. It may be caused by having excessive lateral runs, too many elbows, and exterior portions of the system being exposed to cold weather.

4) Inspect joints, to verify that no pipe sections or fittings have been disturbed, and consequently loosened. Also check mechanical supports such as Wall Straps, or plumbers' tape for rigidity.

LOG REPLACEMENT

The unit should never be used with broken logs. Turn off the gas valve and allow the unit to cool before opening door to carefully remove the logs. The pilot light generates enough heat to burn someone. If for any reason a log should need replacement, you must use the proper replacement log. The position of these logs must be as shown in the diagram under Log Installation.

NOTE: Improper positioning of logs may create carbon build-up and will alter the unit's performance which is not covered under warranty.

GLASS GASKET

If the glass gasket requires replacement use glass gasket (Part # 936-265) for the Bay Front and a tadpole gasket for the Flush Front (Part # 936-155).

GOLD-PLATED TRIM

The 24 carat gold plated finish on the trim requires little maintenance, and need only be cleaned with a damp cloth. DO NOT use abrasive materials or chemical cleaners, as they may harm the finish and void the warranty.

Clean any fingerprints off before turning the unit on. If the top louvers start to discolour, check the door gasket seal and replace if necessary.

DOOR GLASS

Your FPI insert is supplied with high temperature, 5 mm Neoceram ceramic glass that will withstand the highest heat that your unit will produce. If your glass requires cleaning, we recommend using an approved glass cleaner available at all authorized dealers. Do not use abrasive materials. Do not clean the glass when hot.

In the event that you break your glass by impact, purchase your replacement from an authorized FPI dealer only, and follow our step-by-step instructions for replacement.

Warning: Do not operate appliance with glass panels removed, cracked or broken. Replacement of the glass should be done by a licensed or qualified service person.

Caution: Wear gloves when removing damaged or broken glass.

Flush Glass Replacement

Remove the flush door front (as per instructions on page 11). Remove the 4 glass clips from each corner. Slide in the new replacement glass. Push the 4 glass clips back onto the frame.
**Bay Glass Removal**

1) Remove the door from the unit and place on a soft surface to prevent scratching.

2) Remove the nuts holding the glass retainers in place.

3) Remove the glass retainers (sides, top and bottom).

4) Replace the glass. The glass must have gasketing around it.

5) Reverse the previous steps, replace the retainers and fasten with the nuts but do not over tighten, as this can break the glass.

6) Replace door on the stove and check the seal.

**FAN MAINTENANCE**

If your fan requires maintenance or replacement, access to the fan is through the plate on the rear wall of the firebox. **NOTE: the unit MUST NOT be operated without the fan access panel securely in place.**

Caution: Label all wires prior to disconnecting when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing.

**TO REMOVE FAN:**

1) Turn the unit off and allow it to cool to room temperature.

2) Unplug or disconnect power source to stove.

3) Remove glass front (see page 11).

4) Remove logs and brick panels, if used.

5) Remove the grate by loosening the two screws and sliding the grate out.

6) Remove the burner/front log support assembly by removing the 2 screws and lifting it out.

7) Remove the 2 screws holding the Air Intake Hood to the rear firebox wall and lift out.

8) Remove the 10 screws holding the Access Panel in place.

9) Remove the Fan Air Duct by loosening the 3 screws, squeeze the sides together to remove.

10) Unplug the wires from the fan motor (from inside the stove).

11) Lift Fan Assembly off of the 2 pins, tip forward and pull through firebox opening.

12) Disconnect green wire from power cord.

Replacing fan:

Reverse above steps. Hint for pushing fan down onto pins - rub a bit of dish soap on the grommet so it will slide more easily onto the pin.

Check to make sure the fan is seated properly on the pins, this is very important - try to move the fan back and forth, there should be no noise, if there is check that the grommets haven’t come loose.

Seal fan access panel using high temperature silicone (sparingly).
MAINTENANCE

VALVE REPLACEMENT

1) Shut off the gas supply.
2) Remove the louvers (and bay door if it is on).
3) Open the flush door and remove the door.
4) Remove the logs and brick panels.
5) Remove the grate by loosening the two screws and sliding the grate out.
6) Remove the burner assembly by removing the 2 screws and lifting it out.
7) Remove the 2 screws holding the Air Intake Hood to the rear firebox wall and lift out.
8) Disconnect the inlet gas line.
9) Disconnect the TP wire, the TH wire, and the TH/TP wire from the valve.
10) Remove the 11 Phillips head screws securing the valve tray in place and then lift the entire assembly out.

5) Reconnect the pilot tube nut with a 7/16" wrench.
6) Re-attach the valve mounting bracket to the valve tray.
7) Scrape off the old gasket from the floor of the firebox and from the valve tray.
8) Install a new gasket and reinstall the valve assembly.

Note: Failure to install a new gasket may severely affect the appliance performance.
9) Reinstall the 11 hold down screws.
10) Hook up the TP, TH, and TP/TH wires to the appropriate connections on the valve.
11) Reinstall the burner assembly.

Note: when installing the burner assembly be sure to slide the aeration adjustment wire through the hole in the base of the burner tray.
12) Install the grate.
13) Hook up the gas line and check for gas leaks with a soap and water solution or a gas leak detector. (Do not use open flame for leak testing.)
14) Fire up the unit temporarily and check the manifold pressure.
15) Reinstall the vermiculite, embers, rockwool, logs and brick panels as needed.
16) Fire up the unit again and check for proper flame appearance and glow on logs.

11) Push the valve assembly to the left and lift the entire assembly out.
12) Remove the valve by removing the 4 screws in the base of the valve tray.
13) Undo the pilot tube from the valve with a 7/16" wrench.
14) Undo the quick drop out thermocouple nut on the valve with a 9mm (metric) wrench.
15) Undo the "gas out" flare nut with a 13/16" wrench.
16) Undo the "gas out" flare fitting with an 11/16" wrench.
17) Remove the valve mounting brackets.

Hint: If you are using black pipe, ensure that there is a union by the valve, otherwise removal will be almost impossible.

INSTALLING VALVE

1) Re-attach the valve mounting brackets to the valve.
2) Reconnect the "gas out" flare fitting with an 11/16" wrench.
3) Reconnect the "gas out" flare nut with a 13/16" wrench.
4) Reconnect the quick drop out thermocouple nut with a 9mm wrench.

1) Re-attach the valve mounting brackets to the valve.
2) Reconnect the "gas out" flare fitting with an 11/16" wrench.
3) Reconnect the "gas out" flare nut with a 13/16" wrench.
4) Reconnect the quick drop out thermocouple nut with a 9mm wrench.

NOTES
FPI Fireplace Products are designed with reliability and simplicity in mind. In addition, our internal Quality Assurance Team carefully inspects each unit thoroughly before it leaves our facility. FPI Fireplace Products International Ltd. is pleased to extend this limited lifetime warranty to the original purchaser of a FPI Product. This warranty is not transferable.

The Warranty: Limited Lifetime
The combustion chamber, heat exchanger, burner tubes/panels, logs, brick panels and gold plating (against defective manufacture only) are covered under the Limited Lifetime Warranty for five (5) years for parts and subsidized labour* and parts only thereafter.

Glass is covered for lifetime against thermal breakage only, parts and subsidized labour* for five (5) years and parts only thereafter from date of purchase.

External casting, surrounds and grills are covered against cracks and warps resulting from manufacturer defects, parts and subsidized labour* for three (3) years from the date of purchase and parts only thereafter.

Special Finishes - One year on brushed nickel and antique copper full screens and doors. You can expect some changes in color as the product "ages" with constant heating and cooling. FPI warranties the product for any manufacturing defects on the original product. However, the manufacturers warranty does not cover changing colors and marks, ie. finger prints, etc applied after the purchase of the product. Damage from the use of abrasive cleaners is not covered by warranty.

Electrical and mechanical components such as blowers, switches, wiring, thermodiscs, FPI remote controls, spill switches, thermopiles, thermocouples, pilot assembly components, and gas valves are covered for one year parts and subsidized labour* from the date of purchase. Blowers and valves replaced under warranty are considered repairs and continue as if new with appliance. ie. twelve (12) months from original purchase date of appliance with a minimum of three (3) months coverage from date of replacement.

FPI venting components are covered parts and subsidized labour* for three (3) years from date of purchase.

Simpson Dura-Vent venting components (Direct Vent units) are covered by Simpson Dura-Vent Inc. warrant.

Conditions:
Any part or parts of this unit which in our judgement show evidence of such defects will be repaired or replaced at FPI's option, through an accredited distributor or agent provided that the defective part be returned to the distributor or agent Transportation Prepaid, if requested.

Porcelain/Enamel - Absolute perfection is either guaranteed nor commercially possible. Any chips must be reported and inspected by an authorized dealer within three days of installation. Reported damage after this time will be subject to rejection.

It is the general practice of FPI to charge for larger, higher priced replacement parts and issue credit once the replaced component has been returned to FPI and evaluated for manufacturer defect.

The authorized selling dealer is responsible for all in-field service work carried out on your FPI product. FPI will not be liable for results or costs of workmanship from unauthorized service persons or dealers.

At all times FPI reserves the right to inspect product in the field which is claimed to be defective.

All claims must be submitted to FPI by authorized selling dealers. It is essential that all submitted claims provide all of the necessary information including customer name, purchase date, serial #, type of unit, problem, and part or parts requested, without this information the warranty will be invalid.

Exclusions:
This limited Lifetime Warranty does not extend to or include paint, door or glass gasketing or trim.

At no time will FPI be liable for any consequential damages which exceed the purchase price of the unit. FPI has no obligation to enhance or modify any unit once manufactured. ie. as products evolve, field modifications or upgrades will not be performed.

FPI will not be liable for travel costs for service work.

Installation and environmental problems are not the responsibility of the manufacturer and therefore are not covered under the terms of this warranty policy.

Embers, rockwool, gaskets, door handles and paint are not covered under the terms of this warranty policy.

Any unit which shows signs of neglect or misuse is not covered under the terms of this warranty policy.

The warranty will not extend to any part which has been tampered with or altered in any way, or in our judgment has been subject to misuse, improper installation, negligence or accident, spillage or downdrafts caused by environmental or geographical conditions, inadequate ventilation, excessive offsets, negative air pressure caused by mechanical systems such as furnaces, fans, clothes dryer, etc.

Freight damage to stoves and replacement parts is not covered by warranty and is subject to a claim against the freight carrier by the dealer.

FPI will not be liable for acts of God, or acts of terrorism, which cause malfunction of the appliance.

Performance problems due to operator error will not be covered by this warranty policy.

Products made or provided by other manufacturers and used in conjunction with the operation of this appliance without prior authorization from FPI, may nullify your warranty on this product.

Any alteration to the unit which causes sooting or carboning that results in damage to the interior / exterior facia is not the responsibility of FPI.

* Subsidy according to job scale as predetermined by FPI.
