MODEL: H200

Installer: Please complete the details on the back cover and leave this manual with the homeowner.
Homeowner: Please keep these instructions for future reference.

www.hampton-fire.com
Thank-you for purchasing a
HAMPTON FIREPLACE PRODUCT.

The pride of workmanship that goes into each of our products will give you years of trouble-free enjoyment. Should you have any questions about your product that are not covered in this manual, please contact the HAMPTON DEALER in your area.

Keep those HAMPTON FIRES burning.

SAFETY NOTE: If this woodstove is not properly installed, a house fire may result. For your safety, follow the installation instructions, contact local building, fire officials, or authority having jurisdiction about restrictions and installation inspection requirements in your area.

The authority having jurisdiction should be consulted before installation to determine the need to obtain a permit.

---

WARNING!

HOT GLASS WILL CAUSE BURNS
DO NOT TOUCH GLASS UNTIL COOLED
NEVER ALLOW CHILDREN TO TOUCH GLASS

---

We recommend that our products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) or in Canada by Wood Energy Technical Training (WETT).

PRE-INSTALLATION ASSEMBLY

After removing the stove from its packing, open the front door and remove the contents from the firebox, leaving the bricks in place.

Draft Control Lever Handle

1) Insert bolt and lock washer through draft control lever hole.
2) Place handle through bolt. Tighten to secure.

Rotating Elbow

This stove can be connected to either a top or rear vent exit by simply reversing the orientation of the elbow.

Simply remove the 2 screws, change the position of the elbow as desired and secure in place with screws.

Slide tabs in between washer and bolt.

Rear Heat Shield

(Used only on Vertical Installations)

1) Loosen the bolts that secure the elbow to the unit. Ensure elbow does not fall off.
2) Bend the tabs on the rear heat shield inwards 90 degrees.

3) Slide the tabs on the rear heat shield in between the bolt and washer.

Please Note: The shield needs to be stretched/ flexed in order to fit in place.

4) Once rear heat shield is evenly in place, tighten bolts to secure.
RESIDENTIAL INSTALLATION

1) Please read this entire manual before you install and use your new woodstove. Failure to follow instructions may result in property damage, bodily injury or even death. Be aware that local Codes and Regulations may override some items in this manual. Check with your local inspector.

2) Select a position for your Hampton Stove. Consult the minimum clearance chart for your model and set the stove in place. For close clearance installation use listed double wall connector systems.

3) To insure vertical alignment, suspend a plumb bob from the ceiling over the exact center of your stove flue and mark a spot on the ceiling to indicate the center of the chimney.

4) Check that the area above the ceiling is clear for cutting. Re-confirm the clearance from the stove to combustibles to insure that they are within the prescribed limits.

5) This woodstove must be connected to a UL 103 HT (ULC S629) listed chimney or a code approved masonry chimney with a flue liner, from the ceiling and beyond.

6) Install chimney according to chimney manufacturers instructions. The performance of your woodstove is governed to a very large part by the chimney system. Too short a chimney can cause difficult start-up, dirty glass, backsmoking when door is open, and even reduced heat output. Too tall a chimney may prompt excessive draft which can result in very short burn times and excessive heat output. The use of an inexpensive flue pipe damper may be helpful in reducing excessive draft.

CAUTION: The chimney should be the same size as the 6" (152mm) flue outlet on the stove. The chimney must be listed as suitable for use with solid fuels. For other types of chimneys check with your local building code officials. Do not confuse a chimney with a type "B" Venting System used for gas appliances as suitable for a wood burning appliance (refer to the Mobile Home installations section).

7) Mark the location of the legs on the floor, then move the stove aside and mark the position of the floor protector.

8) The floor protector must be of non-combustible material and must extend 16" (406mm) in front of the door opening and 6" (152mm) to the sides and rear of the unit. Some areas may require a larger size floor protector. However, when installing the unit with the short leg option there is a requirement of 0.84k of floor protector beneath the non-combustible finished floor. See your local inspector. For outside air installation (refer to Mobile Home installation section).

9) When the floor protection is complete, position the stove with the flue collar centered under the installed chimney.

10) In seismically active areas, we recommend that your unit is secured to the floor by using the bolt down holes inside the legs (the same ones used in Mobile Home installations).

11) For residential installations using 6" (152mm) "C" Vent (single wall) the chimney connector must be at least 24 gauge steel. Do not use galvanized pipe (refer to the Mobile Home installation section).

12) Do not connect this unit to a chimney serving another appliance.

13) A chimney connector cannot pass through an attic or roof space, closet or similar concealed space, or a floor, ceiling, wall or partition of combustible construction. In Canada, if passage through a wall, or partition of combustible construction is desired, the installation shall conform to CAN/CSA-B365, Installation Code for Solid-Fuel-Burning Appliances and Equipment.

14) Your Hampton Woodstove is not to be connected to any air distribution duct.

MODULAR INSTALLATION OPTIONS

OPTIONS: These can be installed at time of installation or added later:

<table>
<thead>
<tr>
<th>Modular Option</th>
<th>Things to consider when choosing options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Blower/Fan</td>
<td>Adding the blower will increase the area heated by the stove, it can move warm air beyond the room where the stove is installed (refer to the Optional Blower / Fan Installation section).</td>
</tr>
<tr>
<td>Outside Air Adaptor</td>
<td>Helps combustion in small or poorly ventilated houses. Installation instructions come with adaptor.</td>
</tr>
<tr>
<td>Side Shelves</td>
<td>Add to the traditional look of the stove and double as a warming area for your cookstove creations.</td>
</tr>
<tr>
<td>Ash Drawer</td>
<td>Adding the ash drawer will allow for easier removal and transport of ashes.</td>
</tr>
<tr>
<td>Short Legs</td>
<td>Helps in reducing the overall height of the unit to accomodate a variety of installations. Using this option prohibits the use of the ash drawer.</td>
</tr>
</tbody>
</table>

NOTE: In Canada, floor protection must extend 18" (450mm) to the front and 8" (200mm) to each side and back of the stove.

Emissions from burning wood or gas could contain chemicals known to the State of California to cause cancer, birth defects or other reproductive harm.
MINIMUM ALCOVE CLEARANCE AND CLEARANCE TO COMBUSTIBLE MATERIALS

Please read the section below carefully. Measurements "From Unit" are from the top plate of the stove to a side wall or to a corner, and from the rear heat shield to a back wall.

Clearances may only be reduced by means approved by the regulatory authority.

Residential Installation “C” Vent (Single Wall)

<table>
<thead>
<tr>
<th>Unit (with Heat Shield)</th>

<tr>
<td>H200</td>
<td>17&quot; (431 mm)</td>
<td>15&quot; (381 mm)</td>
<td>13&quot; (330 mm)</td>
</tr>
</tbody>
</table>

Residential Close Clearance (To be installed with required pipe components)

When the stove is installed as a close clearance residential unit, a listed double wall connector is required from the stove collar to the ceiling level.

<table>
<thead>
<tr>
<th>Unit (with Heat Shield)</th>
<th>From Unit</th>
<th>From Corner</th>
<th>From Flue Center-Line</th>

</tr>
</tbody>
</table>

NOTE: Be aware that local Codes and Regulations may override some clearances listed in this manual. Check with your local inspector.
MINIMUM ALCOVE CLEARANCE TO
COMBUSTIBLE MATERIALS

This Hampton Freestanding model has been alcove approved and must be installed with a listed double wall connector to the ceiling level.

Note: Minimum alcove ceiling height (from finished floor) - 60" (1525 mm)
Maximum depth of alcove - 48" (1220 mm)

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>H200</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Min. Mantel Height (from finished floor): 48" (1219 mm)
Max. Mantel Depth: 12" (305 mm)

Note: Floor Protection must extend 2" (50mm) to each side of the elbow.
FLOOR PROTECTION

A combustible floor must be protected by non-combustible material (like tile, concrete board, or certified to UL-1618 or as defined by local codes) extending beneath the heater and a minimum of 6" from each side and minimum 16" from the front face of the stove and minimum 6" (or the rear clearance to combustibles whichever is smaller) from the rear of the stove.

When installed with horizontal venting, non-combustible floor protection must beneath the flue pipe and extend 2" (51mm) beyond each side.

A minimum of a 1/2" thick thermal floor protector with a 0.84k factor is required when installing the standard or optional short legs. This applies to both Canada and the US. All other requirements (ie. hearth size) remain the same.

**NOTE:** In Canada, floor protection must extend 18" (450mm) to the front and 8" (200mm) to each side and back of the stove.

### Minimum Overall Depth (Y) of Floor Protector

<table>
<thead>
<tr>

### Minimum Overall Width (X) of Floor Protector for all installations:

<table>
<thead>
<tr>
<th>Unit</th>
<th>Width</th>
</tr>
</thead>
<tbody>
<tr>
<td>H200</td>
<td>36&quot; (914 mm) - US</td>
</tr>
<tr>
<td></td>
<td>40&quot; (1016 mm) - Canada</td>
</tr>
</tbody>
</table>

### How To Determine If Alternate Floor Protection Materials Are Acceptable

**Step (a):**
Use formula above to convert specification to R-value. 

\[ R = \frac{1}{k} x T = \frac{1}{0.84} x .75 = 0.893 \]

**Step (b):**
Calculate R of proposed system. 

- 4" brick of C = 1.25, therefore \( R_{brick} = 1/C = 1/1.25 = 0.80 \)
- 1/8" mineral board of \( k = 0.29 \), therefore \( R_{min.bd.} = 1/0.29 \times 0.125 = 0.431 \)
- Total \( R = R_{brick} + R_{mineral\ board} = 0.8 + 0.431 = 1.231 \).

**Step (c):**
Compare proposed system R of 1.231 to specified R of 0.893. Since proposed system R is greater than required, the system is acceptable.

### Definitions

**Thermal Conductance:**

\[ C = \frac{Btu}{(hr)(ft^2)(°F)} = \frac{W}{(m^2)(K)} \]

**Thermal Conductivity:**

\[ k = \frac{(Btu)(inch)}{(hr)(ft^2)(°F)} = \frac{W}{(m)(K)} = \frac{Btu}{(hr)(ft)(°F)} \]

**Thermal Resistance:**

\[ R = \frac{(ft^2)(hr)(°F)}{Btu} = \frac{(m^2)(K)}{W} \]
STEP-BY-STEP CHIMNEY AND CONNECTOR INSTALLATION

Note: These are a generic set of chimney installation instructions. Always follow the manufacturers own instructions explicitly (check the Minimum Recommended Flue Heights section).

1) With your location already established, cut and frame the roof hole. It is recommended that no ceiling support member be cut for chimney and support box installation. If it is necessary to cut them, the members must be made structurally sound.

2) Install radiant shield and support from above.

3) Stack the insulated pipe onto your finish support to a minimum height of 3 feet above the roof penetration, or 2 feet above any point within 10 feet measured horizontally. There must be at least 3 feet of chimney above the roof level.

4) Slide the roof flashing over your chimney and seal the flashing to the roof with roofing compound. Secure the flashing to your roof with nails or screws.

5) Place the storm collar over the flashing, sealing the joints with a silicone caulking.

6) Fasten the raincap with spark screens (if required) to the top of your chimney.

7) For optimum efficiency when installing into a masonry chimney, size accordingly, i.e. the 6" (152mm) flue dia. is 28.28 sq.in.

8) To complete your chimney installation, install the double wall connector pipe from the stove’ s flue collar to the chimney support device.

9) If you are using a horizontal connector, the chimney connector should be as high as possible while still maintaining the 18" (457mm) minimum distance from the horizontal connector to the ceiling.

10) NOTE: Residential Close Clearance and Alcove installations require a listed double wall connector from the stove collar to the ceiling level.

The diagrams below illustrate one way to install your unit into a standard ceiling or with a horizontal connector. Check with your dealer or installer for information on other options available to you.

FACTORY BUILT CHIMNEY

When a metal prefabricated chimney is used, the manufacturer’s installation instructions must be followed. You must also purchase and install the ceiling support package or wall pass-through and “T” section package, firestops (where needed), insulation shield, roof flashing, chimney cap, etc. Maintain proper clearance to the structure as recommended by the manufacturer. The chimney must be the required height above the roof or other obstructions for safety and proper draft operation.
MASONRY CHIMNEY

Ensure that a masonry chimney meets the minimum standards of the National Fire Protection Association (NFPA) by having it inspected by a professional. Make sure there are no cracks, loose mortar or other signs of deterioration and blockage. Have the chimney cleaned before the stove is installed and operated. When connecting the stove through a combustible wall to a masonry chimney, special methods are needed. Refer to page 13 for Combustible Wall Chimney Connector Pass-Throughs.

MASONRY FIREPLACE

There are listed kits available to connect a stove to a masonry fireplace. The kit is an adapter that is installed at the location of the fireplace damper. The existing damper may have to be removed to allow installation.
**Method A: 12" (304.8 mm) Clearance to Combustible Wall Member:**
Using a minimum thickness 3.5" (89 mm) brick and a 5/8" (15.9 mm) minimum wall thickness clay liner, construct a wall pass-through. The clay liner must conform to ASTM C315 (Standard Specification for Clay Fire Linings) or its equivalent. Keep a minimum of 12" (304.8 mm) of brick masonry between the clay liner and wall combustibles. The clay liner shall run from the brick masonry outer surface to the inner surface of the chimney flue liner but not past the inner surface. Firmly grout or cement the clay liner in place to the chimney flue liner.

**Method B: 9" (228.6 mm) Clearance to Combustible Wall Member:**
Using a 6" (152.4 mm) inside diameter, listed, factory-built Solid-Pak chimney section with insulation of 1" (25.4 mm) or more, build a wall pass-through with a minimum 9" (228.6 mm) air space between the outer wall of the chimney length and wall combustibles. Use sheet metal supports fastened securely to wall surfaces on all sides, to maintain the 9" (228.6 mm) air space. When fastening supports to chimney length, do not penetrate the chimney liner (the inside wall of the Solid-Pak chimney). The inner end of the Solid-Pak chimney section shall be flush with the inside of the masonry chimney flue, and sealed with a non-water soluble refractory cement. Use this cement to also seal to the brick masonry penetration.

**Method C: 6" (152.4 mm) Clearance to Combustible Wall Member:**
Starting with a minimum 24 gage (.024" [.61 mm]) 6" (152.4 mm) metal chimney connector, and a minimum 24 gage ventilated wall thimble which has two air channels of 1" (25.4 mm) each, construct a wall pass-through. There shall be a minimum 6" (152.4 mm) separation area containing fiberglass insulation, from the outer surface of the wall thimble to wall combustibles. Support the wall thimble, and cover its opening with a 24-gage minimum sheet metal support. Maintain the 6" (152.4 mm) space. There should also be a support sized to fit and hold the metal chimney connector. See that the supports are fastened securely to wall surfaces on all sides. Make sure fasteners used to secure the metal chimney connector do not penetrate chimney flue liner.

**Method D: 2" (50.8 mm) Clearance to Combustible Wall Member:**
Start with a solid-pak listed factory built chimney section at least 12" (304 mm) long, with insulation of 1" (25.4 mm) or more, and an inside diameter of 8" (2 inches [51 mm] larger than the 6" [152.4 mm] chimney connector). Use this as a pass-through for a minimum 24-gage single wall steel chimney connector. Keep solid-pak section concentric with and spaced 1" (25.4 mm) off the chimney connector by way of sheet metal support plates at both ends of chimney section. Cover opening with and support chimney section on both sides with 24 gage minimum sheet metal supports. See that the supports are fastened securely to wall surfaces on all sides. Make sure fasteners used to secure chimney flue liner.
Simple rules on draft. See Table 1.

1) At sea level minimum height is 12’ straight.

2) Add the following vertical height to compensate for:
   - 45 deg. elbow = 1 ft.
   - 90 deg. elbow = 2 ft.
   - “T” = 3 ft.
   Each foot of horizontal run = 2 ft.

3) Add 4% overall for each 1000’ above sea level.

Example: a)
- 1-1/2 ft. of horizontal run = 3 ft.
- one “T” = 3 ft.
- Total Addition (at sea level) = 6 ft.

Example: b)
- One 90 deg. elbow = 2 ft.
- 2 ft. of horizontal run = 4 ft.
- one “T” = 3 ft.
- Total Addition (at sea level) = 9 ft.

### TABLE 1

**NOTE:** No more than two offsets (four elbows) allowed. Two 45° elbows equal one 90° elbow.
MOBILE HOME INSTALLATION

Once you have properly marked the position of your unit and the floor protection as outlined in the Residential Installation items #1 through #8, a supply of fresh air has to be supplied to your unit.

Place your unit in position and secure it to the floor using four lag bolts 1/4" through the four holes inside the legs. It is important to maintain the structural integrity of the Mobile Home floor, walls and roof when installing your unit.

For Mobile Home units installed in the U.S. the unit must be grounded using a #8 ground wire with approved termination and star washer.

CAUTION: At no time use unlabelled parts, or substitute parts made for another chimney system.

Install as per chimney manufacturer's installation instructions.

IMPORTANT
DO NOT CONNECT TO OR USE IN CONJUNCTION WITH ANY AIR DISTRIBUTION DUCTWORK UNLESS SPECIFICALLY APPROVED FOR SUCH INSTALLATIONS.

If desired, the air for combustion may be drawn directly from the outside of the house, as detailed below. It is not obligatory to do this, but it may help combustion in small or poorly ventilated house.

Connect a 4" (100 mm) diameter stainless steel, or other non-combustible corrosion resistant material, to the O.S.A hook-up box. In order to do this the O.S.A hook-up box must be connected to the base using 1/2" (12 mm) hex head bolts.

Run the pipe (up to 54" (1372 mm) long) to the outside avoiding sharp bends and joints within cavity walls. Turn the end down and fit corrosion resistant mesh to prevent the entry of leaves and rodents. Seal the penetration of the outside wall with silicon.

WARNING: Do not obstruct free air supply to the air inlet duct located at the back of the stove.

NOTE: Listed factory built chimney connectors including elbows are acceptable for use in Mobile Home Installations.

In addition to standard installation instructions the following requirements are mandatory for installation in a mobile home.

1) The stove must be permanently bolted to the floor of the Mobile Home using the floor screws provided.

2) The stove must have a permanent outside air source for combustion.

3) The stove must be electrically grounded to the steel chassis of the Mobile Home.

4) A listed double-wall connector chimney system, roof thimble, spark arrester and roof flashing kit suitable for use in Mobile Homes must be used.

5) If the chimney exits the Mobile Home at a location other than through the roof, and exits at a point 7ft. (2130mm) or less above the ground level on which the Mobile Home is positioned a guard or method of enclosing the chimney shall be fitted at the point of exit for a height up to 7ft. (2130mm).

6) The chimney shall be attached directly to the room heater and shall extend at least 3 ft. (914mm) above the part of the roof through which it passes. The top of the chimney should project at least 2ft. (610mm) above the highest elevation of any part of the Mobile Home within 10 ft. (3048mm) of the chimney.

7) The chimney system shall comply with Local Requirements.

8) Any openings in a chimney guard where required must not permit the entrance of 3/4" (19mm) diameter rod.

9) CAUTION: THE STRUCTURAL INTEGRITY OF THE MOBILE HOME ROOF, FLOOR, WALLS AND CEILING MUST BE MAINTAINED.

10) Check any other local building code as other local codes may apply.

11) WARNING: DO NOT INSTALL IN A SLEEPING ROOM OF A MOBILE HOME.

12) Use silicone to create an effective vapour barrier at the location where the chimney or other component penetrates to the exterior of the structure.
# LISTED COMPONENTS
## FOR MOBILE HOME INSTALLATION

The Hampton H200 Cast Freestanding unit is approved for installation in a Mobile Home if one of the following pipe systems is used.

*The use of alternate pitch flashings, support box extensions, additional chimney lengths, and additional chimney bracing, may be used on each of the previously listed systems. These parts though must be from the same system as listed, and must be a similar and/or complimentary part.

**CAUTION:** At no time use unlabelled parts, or substitute parts made for another chimney system.

Install as per chimney manufacturer's installation instructions.
BRICK INSTALLATION

Firebrick is included to extend the life of your stove and to radiate heat more evenly. Check to see that all firebricks are in their correct positions and have not become misaligned during shipping.

DOOR REMOVAL

1) Open door.
2) Push spring lever down while holding onto the door.
3) Pull door down and lift out to remove. Bottom of door lifts right out.

Optional Ash Plug shown.

OPTIONAL SHORT LEG INSTALLATION

1) Remove the cast lid from the top of the stove.
2) Remove fan, if installed.
3) Carefully lay the unit on its back on a soft surface to prevent scratching.
4) Remove the 4 standard legs by undoing the bolts.
5) Secure the 4 short legs using the bolts removed from step 4.
6) Carefully bring stove to standing position.
7) Place cast lid back on top of stove.
8) Re-install fan, if removed.
9) Place decal 918-700 (included with cast legs) on the back of the stove near the serial number decal.
An optional blower is available for the Hampton H200. The blower is factory assembled, wired and ready for attachment to the stove.

This unit must be connected to a grounded, standard 120 volts, 60 Hz electrical outlet. Never route the power cord under or in front of the unit.

Do not under any circumstances, cut or remove the grounding prong from the power cord. Do not use an adaptor plug.

NOTE: For more detailed information see instructions included with the Optional Blower.

CAUTION: Moving parts may cause injury. Do not operate unit with blower housing removed.

DANGER: Risk of electric shock. Disconnect power before servicing unit.

WARNING: Electrical Grounding Instructions
This appliance is equipped with a three pronged (grounding) plug for your protection against shock hazard and should be plugged directly into a properly grounded three-prong receptacle. Do not cut or remove the grounding prong from this plug.

OPTIONAL BLOWER/FAN INSTALLATION

1) Remove fan cover plate from back shield by undoing 3 screws and discard plate.

2) Remove back shield by undoing 2 bolts.

3) Loosen the 2 bolts you see after removing back shield, one on each side of the stove.

4) Hook fan over the bolts.

5) Tighten bolts to secure fan.

6) Re-install back shield.

7) Using the 3 screws from the fan cover plate, secure the fan assembly to the back shield.

8) Plug in power cord.

Blower/Fan Wiring Diagram

NOTE INPUT POWER: Australia, New Zealand, China and Japan use 240V AC 50 Hz.

CAUTION: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation.
1) Secure 2 Support Gussets to each Side Shelf using 2 screws per gusset.

2) Secure the Brackets to the middle of the Side Shelves using 2 screws and washers.

3) Remove stove top.

4) Mount side shelf to stove and secure in place using the allen key provided to secure the 2 set screws.

5) Place top back on stove.

**NOTE:** Ensure that the Bracket cut-out is towards the back of the stove.

**NOTE:** When mounting the side shelf ensure that the gusset closest to the front of the stove is against the top of the Side Casting and NOT against the side of the Front Casting. This will help with alignment when the stove top is put back in place.

*Underside of Side Shelf Shown.*

*Underside of Right Hand Side Shelf Shown.*

*Underside of Left Hand Side Shelf Shown.*

*Left side of stove shown.*
OPTIONAL ASH DRAWER KIT INSTALLATION

NOTE: This option is only available with use of standard legs.

1) Remove the andirons and bricks from within the firebox.

2) Remove bottom tray by undoing the 4 bolts.

3) Remove the ash dump cover plates (one inside the firebox and one on the underside of the firebox) by removing the 2 nuts and bolts holding the 2 plates together from underneath the stove.

4) Re-install bottom tray and then install the 2 ash drawer rails to the bottom tray using 4 bolts.

5) Slide the ash drawer on top of the rails making sure the cover is in the open position.

6) Push the ash plug into the hole inside the firebox and re-install the bricks and andirons.
OPERATING INSTRUCTIONS

With your unit now correctly installed and safety inspected by your local authority, you are now ready to start a fire. Before establishing your first fire, it is important that you fully understand the operation of your draft control. See below, First Fire section, for details.

FAN OPERATION

Automatic
To operate the optional fan automatically, push the bottom switch on the side of the fan housing to "AUTO" and the top switch to either "HIGH" or "LOW" for fan speed. This will allow the fan to turn on as the stove has come up to operating temperature. It will also shut the fan system off after the fire has gone out and the unit cooled to below a useful heat output range.

Manual
To manually operate the fan system push the bottom switch to "MAN" and the top switch to either "HIGH" or "LOW". This will bypass the sensing device and allow full control of the fan.

Switching from "AUTO" to "MAN" or "HIGH" to "LOW" may be done anytime.

FIRST FIRE

When your installation is completed and inspected you are ready for your first fire.

1) Open control fully.

2) Open firebox door and build a small fire using paper and dry kindling on the firebrick hearth. Secure door on the firebox and wait a few minutes for a good updraft in the flue to establish the fire. (Leaving the door slightly open will help your fire start more rapidly.)

CAUTION: Never leave unit unattended if door is left open. This procedure is for fire start-up only, as unit may overheat if door is left open for too long.

3) With the draft still in the fully open position add two or three seasoned logs to your fire. Form a trench in the ash bed to allow air to reach the rear of the firebox prior to closing the door.

4) After about 45 minutes, when your wood has begun to burn strongly, adjust your draft control down to keep the fire at a moderate level.

WARNING: Never build a roaring fire in a cold stove. Always warm your stove up slowly!

5) Once a bed of coals has been established on the firebrick hearth, you may adjust the draft control to a low setting to operate the unit at its most efficient mode.

6) During the first few fires, keep the combustion rate at a moderate level and avoid a large fire. Only after 5 or 6 such fires can you operate the stove at its maximum setting, and only after the metal has been warmed.

7) For the first few days, the stove will give off an odour from the paint. This is to be expected as the high temperature paint becomes seasoned. Windows and/or doors should be left open to provide adequate ventilation while this temporary condition exists. Burning the stove at a very high temperature the first few times may damage the paint. Burn fires at a moderate level the first few days.

8) Do not place anything on the stove top during the curing process. This may result in damage to your paint finish.

9) During the first few days it may be more difficult to start the fire. As you dry out your firebrick and your masonry flue, your draft control may be adjusted to maintain your stove up slowly!

10) For those units installed at higher elevations or into sub-standard masonry fireplaces, drafting problems may occur. Consult an experienced dealer or mason on methods of increasing your draft.

11) Some cracking and popping noises may be experienced during the heating up process. These noises will be minimal when your unit reaches temperature.

12) Before opening your door to reload, open draft fully for approximately 10 to 15 seconds until fire has been re-established. This will minimize any smoking.

13) All fuel burning appliances consume oxygen during operation. It is important that you supply a source of fresh air to your unit while burning. A slightly opened window is sufficient for the purpose. If you also have a fireplace in your home, a downdraft may be created by your Hampton Stove causing a draft down your chimney. If this occurs, slightly open a window near your unit.

CAUTION: If the body of your unit, flue baffle or any part of the chimney connector starts to glow, you are over-firing. Stop loading fuel immediately and close the draft control until the glow has completely subsided.

14) Green or wet wood is not recommended for your unit. If you must add wet or green fuel, open the draft control fully until all moisture has been dispersed by the intense fire. Once all moisture has been removed, the draft control may be adjusted to maintain the fire.

15) If you have been burning your stove on a low draft, use caution when opening the door. After opening the damper, open the door a crack, and allow the fire to adjust before fully opening the door.

16) The controls of your unit or the air supply passages should not be altered to increase firing for any reason.

17) If you burn the unit too slowly or at too low a setting your unit will not be operating as efficiently as it can. An easy rule of thumb says that if your glass is clean, then your flue is clean and your exhaust is clean. Burn the stove hot enough to keep your glass clean and you won’t need to clean your flue as often.
SAFETY GUIDELINES AND WARNINGS

1) Never use gasoline, gasoline type lantern fuels, kerosene, charcoal lighter fuel, or similar liquids to start or ‘freshen up’ a fire in your heater. Keep all such liquids well away from the heater while it is in use.

2) Keep the door closed during operation and maintain all seals in good condition.

3) Do not burn any quantities of paper, garbage, and never burn flammable fluids such as gasoline, naphtha or engine oil in your stove.

4) If you have smoke detectors, prevent smoke spillage as this may set off a false alarm.

5) Do not overfire heater. If the chimney connector, flue baffle or the stove top begin to glow, you are overfiring. Stop adding fuel and close the draft control. Overfiring can cause extensive damage to your stove including warpage and premature steel corrosion. Overfiring will void your warranty.

6) Do not permit creosote or soot build-up in the chimney system. Check and clean chimney at regular intervals. Failure to do so can result in a serious chimney fire.

7) Your Hampton stove can be very hot. You may be seriously burned if you touch the stove while it is operating, keep children, clothing and furniture away. Warn children of the burn hazard.

8) The stove consumes air while operating, provide adequate ventilation with an air duct or open a window while the stove is in use.

9) Do not connect this unit to a chimney flue serving another appliance.

10) Do not use grates or andirons or other methods for supporting fuel. Burn directly on the bricks.

11) Open the draft control fully for 10 to 15 seconds prior to slowly opening the door when refuelling the fire.

12) Do not connect your unit to any air distribution duct.

13) Your woodstove should burn dry, standard firewood only. The use of cut lumber, plywood, “mill ends”, etc. is not allowed as this fuel can easily overheat your woodstove. Evidence of excessive overheating will void your warranty. As well, a large portion of sawmill waste is chemically treated lumber, which is illegal to burn in many areas. Salt drift wood and chemically treated fire logs also must not be burned in your woodstoves.

14) Do not store any fuel closer than 2 feet from your unit. Do not place wood, paper, furniture, drapes or other combustibles near the appliance.

15) WARNING: Do not operate without the Ash Plug properly seated.

16) Do not operate with broken glass.

DRAFT CONTROL

Both the primary and air wash drafts are controlled by the control handle located on the right side of the unit (when facing the unit). To increase your draft - push lever to the back, and to decrease - pull lever to the front. All units have a secondary draft system that continually allows combustion air to the induction ports at the bottom of the firebox, just below the rear cover.

WARNING: To build a fire with disregard to the information contained in this section can cause serious permanent damage to the unit and void your warranty.
ASH DISPOSAL

During constant use, ashes should be removed every few days. The Ash Drawer features a convenient ash drawer for easy removal of ashes.

Safety Precautions

1) Do not allow ashes to build up to the loading doors! Only remove ashes when the fire has died down. Even then, expect to find a few hot embers.

2) Please take care to prevent the build-up of ash around the start-up air housing located inside the stove box, near the pilot.

3) Never start a fire if the ash plug and ash drawer are not in place. This will cause overfiring which can cause excessive warping of the stove. Evidence of overfiring can void the warranty on your stove.

4) The firebricks are brittle and can be damaged if the plug is replaced carelessly or pieces that are too large are forced through the hole.

Optional Ash Drawer Operating Guideline

1) Only clean ashes out of the stove when the unit has cooled down. Remove the plug by lifting on the handle using the tool provided. The plug may still be warm, use caution. Push the ashes down the hole into the ash drawer, the large pieces can be left in the firebox and burned during the next fire or removed through the door opening.

2) Always leave 1/2 to 1 inch of ash in the bottom of the firebox. This helps in easier starting and a more uniform burn of your fire.

3) To remove the drawer, slide it out. When the drawer is completely out, slide the cover plate over the ash drawer and carry away.

4) When emptying the ash drawer, make sure the ashes have cooled down completely. Ashes should be placed in a metal container with a tight fitting lid. The closed container of ashes should be placed on a non-combustible floor or on the ground, well away from all combustible materials, pending final disposal. If the ashes are disposed of by burial in soil or otherwise locally dispersed, they should be retained in the closed container until all cinders have thoroughly cooled. Other waste should not be placed in the ash container.

5) Before putting the ash drawer back in, ensure that the ash plug is back in place.
**MAINTENANCE**

It is very important to carefully maintain your stove, including burning seasoned wood and maintaining a clean stove and chimney system. Have the chimney cleaned before the burning season and as necessary during the season, as creosote deposits may build up rapidly. Moving parts of your stove require no lubrication.

---

**GLASS INSTALLATION/REPLACEMENT**

1) Remove door from unit.
2) To replace the glass remove the 12 screws highlighted in the diagram below.
3) Lift off the glass retainer and carefully remove glass.
4) Place new glass in the door, make sure that the glass gasketing will properly seal your unit.
5) Position the glass retainer back on. Ensure that it rests on the gasket and not the glass.
6) Secure glass retainer using the 12 screws. Do not wrench down on the glass as this may cause the glass to break.
7) Place door back on unit.

---

**GLASS MAINTENANCE**

Your Hampton stove is supplied with 5 mm Neoceram ceramic glass (Part #940-345) that will withstand the highest heat that your unit will produce. In the event that you break your glass by impact, purchase your replacement from an authorized Hampton dealer only, and follow our step-by-step Glass Installation/Replacement instructions (refer to previous section).

It will be necessary to clean carbon and fly ash off of the glass at times. If carbon and fly ash remain on the glass for an extended period of time, the glass could eventually become etched and cloudy.

1) Allow the stove to cool down completely before cleaning the glass, do not clean the glass when it is hot.
2) Use cleaners specifically designed for this glass cleaning. Do not use abrasive cleaners.
3) Ensure the glass is dry before burning your stove.

---

**WOOD STORAGE**

Store wood under cover, such as in a shed, or covered with a tarp, plastic, tar paper, sheets of scrap plywood, etc., as uncovered wood can absorb water from rain or snow, delaying the seasoning process.

---

**CREOSOTE**

When wood is burned slowly, it produces tar and other organic vapours, which when combined with moisture, form creosote. The creosote vapours condense in the relatively cool chimney flue of a slow burning fire. As a result, creosote residue accumulates on the flue lining. When ignited, this creosote can result in an extremely hot fire.

---

**WAYS TO PREVENT AND KEEP UNIT FREE OF CREATOSOTE**

1) Burn stove with the draft control wide open for about 10-15 minutes every morning during burning season.
2) Burn stove with draft control wide open for about 10 - 15 minutes every time you apply fresh wood. This allows the wood to achieve the charcoal stage faster and burns up any unburned gas vapours which might otherwise be deposited within the system.
3) Only burn seasoned wood! Avoid burning wet or green wood. Seasoned wood has been dried at least one year.
4) A small hot fire is preferable to a large smouldering one that can deposit creosote within the system.
5) The chimney and chimney connector should be inspected at least once every two months during the heating season to determine if a creosote buildup has occurred.
6) Have chimney system and unit cleaned by competent chimney sweeps twice a year during the first year of use and at least once a year thereafter or when a significant layer of creosote has accumulated (3mm/1/8” or more) it should be removed to reduce the risk of a chimney fire.

---

**WARNING: Things to remember in case of a chimney fire:**

1. Close all draft and damper controls.
2. CALL THE FIRE DEPARTMENT.
**MAINTENANCE**

**FRONT DOOR GASKET**

If the front door gasket requires replacement 5/8” diameter material must be used. Hampton uses a 5/8” diameter gasket (Part# 336-232). A proper high temperature gasket adhesive is required. See your Hampton Dealer.

![Front Door Gasket Diagram]

**HANDLE REPLACEMENT**

1) Remove handle (front or side) by undoing the hex head bolt using a 7/16” socket wrench.

2) Fit new door handle over latch and secure.

Assembly shown below.

![Handle Assembly Diagram]

**LATCH ADJUSTMENT METHOD**

The door bracketry may require adjustment as the door gasket material compresses after a few fires. Removal of the spacer washer will allow the latch to be moved closer to the door frame, causing a tighter seal.

Relocate the washer removed from the back of the bracket to the front. This will allow the same screw to be used.

Use the 3/16” allen key enclosed in the packaged manual to make this adjustment.

![Allen Key Diagram]

**If position of bracketry needs to be changed after adjustment:**

The bracketry should start from the highest point, as seen below. If needed, bring the bracketry down 1/16” each time, until finding the best locking position. The door latch will catch best in this way.

(Listen for a double click sound when the door is locked.)

![Bracketry Adjustment Diagram]
TOP BAFFLE REPLACEMENT

1) Lift the Top Hob off the top of the stove.

2) Remove the five (7/16) socket 1/4 x 1" hex bolts from the Firebox Top Assembly and lift off.

3) Remove the left and right baffle caps by removing the 2 bolts (7/16) socket 1/4-20 x 1/2" hex head on each side and lift out.

4) Remove the three (7/16) socket 1/4-20 x 1/2" stainless steel hex bolts inside the firebox holding the top baffle assembly and remove.

5) Replace the Top Baffle

6) Reverse steps 4 to 1.

Top Hob

Hampton Fireplace Products are designed with reliability and simplicity in mind. In addition, our internal Quality Assurance Team carefully inspects each unit thoroughly before it leaves our facility. FPI Fireplace Products International Ltd. is pleased to extend this limited lifetime warranty to the original purchaser of a Hampton Product. This warranty is not transferable.

The Warranty: Limited Lifetime

H200 / H300: Firebox castings on all Hampton Wood burning Appliances are covered against manufacturer defects for a period of three (3) years parts and subsidized labour* and a further two (2) years, parts only. Stainless steel baffles are covered against manufacturer defects for a period of three (3) years parts and subsidized labour* and parts only thereafter.

HI300: Steel fireboxes to be free from defects in materials and workmanship, also covered are vermiculite baffles and air tubes (against warpage) against manufacturer's defects for a period of 3 years parts and subsidized labor and parts only thereafter.

External casting, not directly in contact with the fire, such as hobs, sides, side shelves, ash lips, legs, fronts, fire doors and surrounds are covered against cracks and warps resulting from manufacturer defects, parts and subsidized labour* for three (3) years from the date of purchase and parts only thereafter.

Glass is covered for lifetime against thermal breakage only, parts and subsidized labour* for three (3) years and parts only thereafter from date of purchase.

Blowers and electrical are covered against manufacturer defect for two years parts and one year subsidized labour* from date of purchase. Replacement blowers are considered repairs and continue as if new with appliance. ie. twelve (12) months from original purchase date of appliance with a minimum of three (3) months coverage from date of replacement.

Repair replacement parts purchased by the consumer from FPI after the original coverage has expired on the unit will carry a 90 day warranty, valid with a receipt only. Any item shown to be defective will be repaired or replaced at our discretion. No labor coverage is included with these parts.

Conditions:

Porcelain/Enamel - Absolute perfection is neither guaranteed nor commercially possible. Any chips must be reported and inspected by an authorized dealer within three days of installation. Reported damage after this time will be subject to rejection.

Any part or parts of this unit which in our judgement show evidence of such defects will be repaired or replaced at FPI's option, through an accredited distributor or agent provided that the defective part be returned to the distributor or agent Transportation Prepaid, if requested.

It is the general practice of FPI to charge for larger, higher priced replacement parts and issue credit once the replaced component has been returned to FPI and evaluated for manufacturer defect.

The authorized selling dealer is responsible for all in-field service work carried out on your Hampton product. FPI will not be liable for results or costs of workmanship from unauthorized service persons or dealers.

At all times FPI reserves the right to inspect product in the field which is claimed to be defective.

Exclusions:

This limited Lifetime Warranty does not extend to or include paint (charcoal units), porcelain (including pinholes, scratches and minor shade mismatch), door or glass gasketing or trim.

At no time will FPI be liable for any consequential damages which exceed the purchase price of the unit. FPI has no obligation to enhance or modify any unit once manufactured. ie. as products evolve, field modifications or upgrades will not be performed.

FPI will not be liable for travel costs for service work.

Installation and environmental problems are not the responsibility of the manufacturer and therefore are not covered under the terms of this warranty policy.

Refractory liners (firebrick), gaskets, door handles, paint are not covered under the terms of this warranty policy.

Any unit which shows signs of neglect or misuse is not covered under the terms of this warranty policy.

The warranty will not extend to any part which has been tampered with or altered in any way, or in our judgment has been subject to misuse, improper installation, negligence or accident, spillage or downdrafts caused by environmental or geographical conditions, inadequate ventilation, excessive offsets, negative air pressure caused by mechanical systems such as furnaces, fans, clothes dryer, etc.

Freight damage to stoves and replacement parts is not covered by warranty and is subject to a claim against the freight carrier by the dealer.

FPI will not be liable for acts of God, or acts of terrorism, which cause malfunction of the appliance.

Performance problems due to operator error will not be covered by this warranty policy.

* Subsidy according to job scale as predetermined by FPI.
