- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

- WHAT TO DO IF YOU SMELL GAS
  - Do not try to light any appliance.
  - Do not touch any electrical switch: do not use any phone in your building. Leave the building immediately.
  - Immediately call your gas supplier from a neighbour's phone. Follow the gas supplier's instructions.
  - If you cannot reach your gas supplier, call the fire department.

- Installation and service must be performed by a qualified installer, service agency or the gas supplier.
To the New Owner:

Congratulations!
You are the owner of a state-of-the-art Gas Fireplace by REGENCY®. The City Series are hand crafted appliances and have been designed to provide you with all the warmth and charm of a wood fireplace at the flick of a switch. The CV40EPV City Series has been approved by Intertek for both safety and efficiency. As it also bears our own mark, it promises to provide you with economy, comfort and security for many trouble free years to follow. Please take a moment now to acquaint yourself with these instructions and the many features of your Regency® Fireplace.

DANGER

HOT GLASS WILL CAUSE BURNS

DO NOT TOUCH GLASS UNTIL COOLED

NEVER ALLOW CHILDREN TO TOUCH GLASS

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and shall be installed for the protection of children and other at risk individuals.

CAUTION:

HOT WHILE IN OPERATION. DO NOT TOUCH. SEVERE BURNS MAY RESULT. KEEP CHILDREN, CLOTHING, FURNITURE, GASOLINE, AND ANY LIQUIDS WITH FLAMMABLE VAPOURS AWAY.

KEEP BURNER AND CONTROL COMPARTMENT CLEAN. SEE INSTALLATION AND OPERATING INSTRUCTIONS ACCOMPANYING APPLIANCE.

This appliance may be installed in an aftermarket, permanently located, manufactured home (USA only) or mobile home, where not prohibited by local codes.

This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible fore use with other gases, unless a certified kit is used.
MANUFACTURED MOBILE HOME REQUIREMENTS

INFORMATION FOR MOBILE/MANUFACTURED HOMES AFTER FIRST SALE

This Regency® product has been tested and listed by Intertek as a Direct Vent Wall Furnace to the following standards: to Vented Gas Fireplace Heaters ANSI Z21.88-2017 • CSA 2.33-2017 and Gas-fired Appliances for Use at High Altitudes CSA 2.17-2017.

This Direct Vent System Appliance must be installed in accordance with the manufacturer's installation instructions and the Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280, or the current Standard of Fire Safety Criteria for Manufactured Home Installations, Sites, and Communities ANSI/NFPA 501A, and with CAN/CSA Z240-MH Mobile Home Standard in Canada.

This appliance installation must comply with the manufacturer's installation instructions and local codes, if any. In the absence of local codes follow the current National Fuel Gas Code, ANSI Z223.1 and the current National Electrical Code ANSI/NFPA 70 in the U.S.A., and the current CAN/CGA B149 Gas Installation Code and the current Canadian Electrical Code CSA C22.1 in Canada.

This Regency® mobile/manufactured home listed appliance comes factory equipped with four 1/4” diameter holes located near each corner of the base. Fasten the fireplace in place using screw, inserted through the holes.

This appliance comes equipped with a dedicated #8 Ground Lug for attachment of the ground wire to the steel chassis as applicable to local codes. See the "Wiring Diagram" section.

The appliance, when installed, must be electrically grounded in accordance with local codes or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70, or the Canadian Electrical Code, CSA C22.1.

This appliance may only be installed in an aftermarket permanently located, manufactured home (U.S.A only) or mobile home, where not prohibited by local codes.

This appliance can only be used with the type of gas indicated on the rating plate. This appliance is not convertible for use with other cases, unless a certified kit is used.

Ensure that structural members are not cut or weakened during installation.

This is a copy of the label that accompanies Direct Vent Gas Fireplace. We have printed a copy of the contents here for your review. The safety label is located on the front inside base of the unit, visible when the outer front panel is removed.

NOTE: Regency® units are constantly being improved. Check the label on the unit and if there is a difference, the label on the unit is the correct one.

Copy of Safety Decal

### Decal Location

Remove barrier glass from unit (refer to manual) lift out the outer liner base glass once the glass has been removed the rating plate will be attached to a small black chain as seen below.

**DO NOT REMOVE DECAL FROM UNIT**
**CV40EPV Dimensions**

Note: Height Dimension may vary depending on the height of the leveling legs.

Dimensions will appear as (inches)" / (metric)mm throughout this manual. The inches are rounded to the nearest 1/16" when converted; when greater accuracy is required, use the metric dimensions.

Note: These units are non-load bearing.

ALL PICTURES / DIAGRAMS SHOWN THROUGHOUT THIS MANUAL ARE FOR ILLUSTRATION PURPOSES ONLY. ACTUAL PRODUCT MAY VARY DUE TO PRODUCT ENHANCEMENTS.
Important Message

SAVE THESE INSTRUCTIONS

City Line Direct Vent Fireplaces must be installed in accordance with these instructions. Carefully read all the instructions in this manual first. Consult the "authority having jurisdiction" to determine the need for a permit prior to starting the installation. It is the responsibility of the installer to ensure this fireplace is installed in compliance with the manufacturer’s instructions and all applicable codes.

Before You Start

Safe installation and operation of this appliance requires common sense, however, we are required by the Canadian Safety Standards and ANSI Standards to make you aware of the following:

**INSTALLATION AND REPAIR SHOULD BE DONE BY AN AUTHORIZED SERVICE PERSON. THE APPLIANCE SHOULD BE INSPECTED BEFORE USE AND AT LEAST ANNUALLY BY A PROFESSIONAL SERVICE PERSON. MORE FREQUENT CLEANING MAY BE REQUIRED DUE TO EXCESSIVE LINT FROM CARPETING, BEDDING MATERIAL, ETC. IT IS IMPERATIVE THAT CONTROL COMPARTMENTS, BURNERS AND CIRCULATING AIR PASSAGEWAYS OF THE APPLIANCE BE KEPT CLEAN.**

**DUE TO HIGH TEMPERATURES, THE APPLIANCE SHOULD BE LOCATED OUT OF TRAFFIC AND AWAY FROM FURNITURE AND DRAPERIES.**

**WARNING: FAILURE TO INSTALL THIS APPLIANCE CORRECTLY WILL VOID YOUR WARRANTY AND MAY CAUSE A SERIOUS HOUSE FIRE.**

---

**CHILDREN AND ADULTS SHOULD BE ALERTED TO THE HAZARDS OF HIGH SURFACE TEMPERATURES, ESPECIALLY THE FIREPLACE GLASS, AND SHOULD STAY AWAY TO AVOID BURNS OR CLOTHING IGNITION.**

**YOUNG CHILDREN SHOULD BE CAREFULLY SUPERVISED WHEN THEY ARE IN THE SAME AREA AS THE APPLIANCE. TODDLERS, YOUNG CHILDREN AND OTHERS MAY BE SUSCEPTIBLE TO ACCIDENTAL CONTACT BURNS. A PHYSICAL BARRIER IS RECOMMENDED IF THERE ARE AT RISK INDIVIDUALS IN THE HOUSE. TO RESTRICT ACCESS TO A FIREPLACE OR STOVE, INSTALL AN ADJUSTABLE SAFETY GATE TO KEEP TODDLERS, YOUNG CHILDREN AND OTHER AT-RISK INDIVIDUALS OUT OF THE ROOM AND AWAY FROM HOT SURFACES.**

**CLOTHING OR OTHER FLAMMABLE MATERIAL SHOULD NOT BE PLACED ON OR NEAR THE APPLIANCE.**

**A BARRIER DESIGNED TO REDUCE THE RISK OF BURNS FROM THE HOT VIEWING GLASS IS PROVIDED WITH THIS APPLIANCE AND SHALL BE INSTALLED FOR THE PROTECTION OF CHILDREN AND OTHER AT-RISK INDIVIDUALS**

**ANY SAFETY SCREEN, GUARD, OR BARRIER REMOVED FOR SERVICING THE APPLIANCE, MUST BE REPLACED PRIOR TO OPERATING THE APPLIANCE.**

**IF THE BARRIER BECOMES DAMAGED, THE BARRIER SHALL BE REPLACED WITH THE MANUFACTURER’S BARRIER FOR THIS APPLIANCE.**

---

**WE RECOMMEND REMOVING THE GLASS WITH THE GLASS VACUUM HOLDERS SUPPLIED BY THE MANUFACTURER. LOWER THE GLASS TO REST IN A SAFE PLACE. THIS IS TO PREVENT DAMAGE TO THE GLASS EDGES. EXTRA CARE MUST BE TAKEN WHEN REMOVING/INSTALLING THE GLASS. BREAKAGE OR DAMAGE TO THE EDGE OF THE GLASS WHICH OCCURS AS A RESULT OF CARELESS HANDLING WILL NOT BE COVERED UNDER WARRANTY.**

---

**WARNING: Cancer and Reproductive Harm**

www.P65Warnings.ca.gov
General Safety Information

1. The appliance installation must conform with local codes or, in the absence of local codes, with the current Canadian or National Gas Codes, CAN1-B149 or ANSI Z223.1 Installation Codes.

2. See general construction and assembly instructions. The appliance and vent should be enclosed.

3. This appliance must be connected to the specified vent and termination cap to the outside of the building envelope. Never vent to another room or inside a building. Make sure that the vent is fitted as per Venting instructions.

4. Inspect the venting system annually for blockage and any signs of deterioration.

5. Venting terminals shall not be recessed into a wall or siding.

6. Any safety glass removed for servicing must be replaced prior to operating the appliance.

7. To prevent injury, do not allow anyone who is unfamiliar with the operation to use the fireplace.

8. Wear gloves and safety glasses for protection while doing required maintenance.

9. Be aware of electrical wiring locations in walls and ceilings when cutting holes for termination.

10. Under no circumstances should this appliance be modified. Parts that have to be removed for servicing should be replaced prior to operating this appliance.

11. Installation and any repairs to this appliance should be done by a qualified service person. A professional service person should be called to inspect this appliance annually. Make it a practice to have all of your gas appliances checked annually.

12. Do not slam shut or strike the glass door.

13. Under no circumstances should any solid fuels (wood, paper, cardboard, coal, etc.) be used in this appliance.

14. The appliance area must be kept clear and free of combustible materials, (gases and other flammable vapours and liquids).
Lighting Procedure

IMPORTANT: The remote control system supplied with this appliance has several options for starting/operating the appliance using the battery holder and ON/OFF key on the handheld transmitter. Prior to operating this appliance, please read the remote control operating instructions (packaged with remote control) to understand how to operate this remote control system.

1. Ensure the battery holder switch is in the Remote position and / or wall mounted battery holder (if equipped) is in the <REMOTE> position.

2. Press and release the ON/OFF button on the remote handheld transmitter (see Diagram 1). An audible beep should be heard from the receiver. If not using the remote, the unit can also be turned on by sliding the battery holder switch to the <ON> position (if equipped).

3. After approximately 15 seconds the spark ignition system will spark for 60 seconds to light the pilot.

4. The unit will turn on.

Note: The first try for ignition will last approximately 60 seconds. If there is no flame ignition (rectification) the board will stop sparking for approximately 35 seconds. After wait time, the board will start second try for ignition by sparking for approximately 60 seconds. If there is still no positive ignition the board will go into lock out.

The system will need to be reset as follows:

a) Turn the system off by pressing the ON/OFF button on the remote.

b) Wait 5 minutes then repeat from step 2.

Shutdown Procedure

1. Press the ON/OFF button on the remote

2. If service is to be performed- you must disconnect power and shut off gas to the unit.
FOR YOUR SAFETY READ BEFORE LIGHTING
POUR VOTRE SÉCURITÉ – À LIRE AVANT LA MISE EN MARCHE

This appliance must be installed in accordance with local codes, if any; if none, follow the National Fuel Gas Code, ANSI Z223.1/NFPA 54, or Natural Gas and Propane Installation Codes, CSA B149.1. Cet appareil doit être installé conformément aux codes locaux, s'il y a lieu. En l'absence de tels codes, suivez le National Fuel Gas Code, ANSI Z223.1/NFPA 54, ou les Natural Gas and Propane Installation Codes, CSA B149.1.

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life. Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to the owner’s information manual provided with this appliance. For assistance or additional information consult a qualified installer, service agency or gas supplier.

AVERTISSEMENT : Quiconque ne respecte pas scrupuleusement les instructions de la présente notice risque de déclencher un incendie ou une explosion pouvant entraîner des dégâts matériels ou des blessures pouvant être mortelles. Tout défaut d'installation, de réglage, de modification, de service ou d'entretien peut entraîner des blessures ou des dommages matériels. Reportez-vous au manuel d'utilisation fourni avec cet équipement. Pour obtenir de l’aide ou des informations complémentaires, consultez un installateur ou un service d'entretien qualifié, ou le fournisseur de gaz.

A) This appliance is equipped with an ignition device which automatically lights the pilot. Do not try to light the pilot by hand.

B) BEFORE OPERATING, smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS
- Do not try to light any appliance.
- Do not touch any electric switch, do not use any phone in your building.
- Immediately call your gas supplier from a neighbours phone. Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

C) Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and replace any part of the control system and any gas control which has been underwater.

A) Cet appareil est muni d'un dispositif d'allumage qui allume automatiquement la veilleuse. Ne tentez pas d'allumer la veilleuse manuellement.

B) AVANT LA MISE EN MARCHE, reniflez tout autour de l'appareil pour déceler une odeur de gaz. Reniflez au niveau du plancher, car certains gaz sont plus lourds que l'air et peuvent s'accumuler au niveau du sol.

QUE FAIRE SI VOUS SENTEZ UNE ODEUR DE GAZ :
- Ne tentez pas d'allumer l'appareil
- Ne touchez à aucun interrupteur, n'utilisez pas de téléphones se trouvant dans le bâtiment.
- Appelez immédiatement votre fournisseur de gaz depuis un téléphone extérieur. Suivez les instructions du fournisseur.
- Si vous ne pouvez pas rejoindre le fournisseur, appelez le service incendie.

C) N'utilisez pas cet appareil s'il a été plongé dans l'eau, même partiellement. Faites inspecter l'appareil par un technicien qualifié et remplacez tout élément du système de contrôle ou de commande qui a été plongé dans l'eau.

CAUTION: Hot while in operation. Do not touch. Severe burns may result. Due to high surface temperatures keep children, clothing and furniture, gasoline and other liquids having flammable vapors away. Keep burner and control compartment clean. See installation and operating instructions accompanying appliance.

LIGHTING INSTRUCTIONS / CONSIGNES D’ALLUMAGE

1) Ensure the Main switch is in the ON position and/or the wall mounted battery holder (if equipped) is in the <REMOTE> position.

2) Press and release the ON/OFF button on the remote handheld transmitter. An audible beep should be heard from the receiver. If not using the remote, the unit can also be turned on by sliding the battery holder switch to the <ON> position (if equipped).

3) After approximately 15 seconds the spark ignition system will spark for 60 seconds to light the main burner.

4) The unit will turn on.

Note: The first attempt to ignition will last approximately 60 seconds. If there is no flame ignition (rectification) the board will stop sparking for approximately 35 seconds. After this wait time, the board will start a second try for ignition by sparking for approximately 60 seconds. If there is still no positive ignition after the second attempt the board will go into lock out.

The system will need to be reset as follows (after going into lock out mode):
- a) Wait 5 minutes - turn the system off by pressing the ON/OFF button on the remote.
- b) After approximately 2 seconds press the ON/OFF button again.
- c) Unit will repeat step 2.

1) S'assurer que le commutateur principal est en position ON et/ou que le bloc-piles mural (le cas échéant) est en position <REMOTE>.

2) Appuyer sur la touche ON/OFF de la télécommande puis relâcher. Un bip sonore retentira depuis le récepteur. Si vous n’utilisez pas la télécommande, l’appareil peut également être allumé en faisant glisser le commutateur du bloc-piles sur la position <ON> (le cas échéant).

3) Après environ 15 secondes, le système d’allumage produira une étincelle pendant 60 secondes pour allumer le brûleur principal.

L’appareil s’allumera. Remarque : Au premier allumage, le système tente d’allumer les flammes pendant 60 secondes. Si l’essai est infructueux, le système fera une pause de 35 secondes. C’est ce qu’on appelle l’étape de rectification. Ce délai écoulé, le système tente à nouveau d’allumer les flammes en produisant des étincelles pendant 60 secondes. Si les flammes ne s’allument toujours pas, le système se met en mode verrouillage.

Il faut alors le réinitialiser en suivant les étapes ci-dessous (pour le déverrouiller) :
- a) Attendre 5 minutes et étendre l’appareil en appuyant sur la touche ON/OFF de la télécommande.
- b) Attendre 2 secondes et appuyer encore une fois sur la touche ON/OFF.
- c) L’appareil répétera l’étape 2.

TO TURN OFF GAS APPLIANCE / POUR ÉTEINDRE UN APPAREIL AU GAZ

1) Press the ON/OFF button on the remote.

2) If service is to be performed— you must disconnect power and shut off gas to the unit.

1) Appuyer sur la touche ON/OFF de la télécommande.

2) Lors de l’entretien de l’appareil, vous devez débrancher l’alimentation électrique et couper le gaz alimentant l’appareil.
**IMPORTANT:** The Proflame Transmitter 2 is an integrated part of the Proflame 2 System, which consists of these elements:
- Proflame 2 Transmitter, to be used in conjunction with:
- Integrated Fireplaces Control (Proflame 2 IFC)

The Proflame 2 Transmitter provides for controlling the following hearth appliance functions:
1. Main Burner On/Off
2. Main Burner flame modulation (6 levels)
3. Choice of standing or intermittent pilot (CPI/IPI)
4. Thermostat and Smart thermostat functions
5. Accent light modulation (6 levels)**
6. Split flow valve**
7. Comfort Fan speed modulation (6 levels)**

** This feature is not available on all models.

The Proflame Transmitter uses a streamline design with a simple button layout and informative LCD display (Fig. 1). A Mode Key is provided to index between the features and a Thermostat Key is used to turn on/off or index through Thermostat functions (Fig. 1 & 2). Additionally, a Key Lock feature is provided (Fig. 22).

**WARNING:** THE TRANSMITTER AND RECEIVER ARE RADIO FREQUENCY DEVICES. PLACING THE RECEIVER IN OR NEAR METAL MAY SEVERELY REDUCE THE SIGNAL RANGE.

**ATTENTION!**
- Turn “OFF” the main gas supply of the appliance during installation or maintenance of the Receiver device.
- Turn “OFF” main gas supply to the appliance prior to removing or reinserting the batteries.
- In case of remote control malfunction, turn off the IFC device using the “ON/OFF” main switch.
- For installation/maintenance, switch off the IFC device removing main power supply plug.

### OPERATING PROCEDURE

**Initializing the System for the first time**

Power the receiver. Press the "PRG" button located on the top right hand corner of receiver/battery holder, see the receiver instruction (*). The Receiver will “beep” three (3) times to indicate that it is ready to synchronize with a Transmitter. Install the 3 AAA type batteries in the Transmitter battery bay, located on the base of the Transmitter. (Fig. 3) With the batteries already installed in the Transmitter, push the On button. The Receiver will “beep” four times to indicate the Transmitter’s command is accepted and sets to the particular code of that Transmitter. The system is now initialized.

(*) The receiver may be independent or integral to the IFC hearth appliance control module. The receiver instruction may not be independent when part of the IFC.
Temperature indication Display

With the system in the "OFF" position, press the Thermostat Key and the Mode Key at the same time. Look at the LCD screen on the transmitter to verify that a C or F is visible to the right of the room temperature display (Figures 4 & 5).

![Figure 4: Remote Control display in Farenheit.](image)

![Figure 5: Remote Control display in Celsius.](image)

Remote-Flame Control

The proflame has six (6) flame levels. With the system on, and the flame level at the maximum in the appliance, pressing the Down Arrow Key once will reduce the flame height by one step until the flame is turned off. The Up Arrow Key will increase the flame height each time it is pressed. If the Up Arrow Key is pressed while the system is on but the flame is off, the flame will come on in the high position. (Fig. 7 & 8) A single “beep” will confirm reception of the command.

![Figure 7](image)

![Flame Off](image)

![Flame Level 1](image)

![Flame Level 5](image)

![Flame Level Maximum](image)

Turn on the Appliance

With the system OFF, press the ON/OFF Key on the Transmitter. The Transmitter display will show some other active Icons on the screen. At the same time the Receiver will activate the appliance. A single “beep” from the Receiver will confirm reception of the command.

![Figure 6: Remote Control display](image)

Turn off the Appliance

With the system ON, press the ON/OFF Key on the Transmitter. The Transmitter LCD display will only show the room temperature (Fig. 6). At the same time the Receiver will turn off the appliance. A single “beep” from the Receiver confirms reception of the command.

![Figure 9](image)

Figure 9

ROO...
Smart Thermostat (Transmitter Operation)

The Smart Thermostat function adjusts the flame height in accordance to the difference between the set point temperature and the actual room temperatures. As the room temperature gets closer to the set point the Smart Function will modulate the flame down.

To activate this function, press the Thermostat Key (Fig. 1) until the word "SMART" appears to the right of the temperature bulb graphic (Fig. 11).

To adjust the set temperature, press the Up or Down Arrow Keys until the desired set temperature is displayed on the LCD screen of the Transmitter (Fig. 12).

Note: When Smart Thermostat is activated, manual flame height adjustment is disabled.

Remote dimmer control (Light)**

The auxiliary function controls the AUX power outlet by the dimmable light control. To activate this function use the Mode Key (fig. 1) to index to the AUX icon (fig. 15 & 16).

The intensity of the output can be adjusted through six (6) levels. Use the Up/Down Arrow Keys (fig. 1) adjust the output level (fig. 16). A single “beep” will confirm reception of the command.

Note: This function is available only with the IFC Control Module.

Fan Speed Control**

If the appliance is equipped with a hot air circulating fan, the speed of the fan can be controlled by the Proflame system. The fan speed can be adjusted through six (6) speeds. To activate this function use the Mode Key (fig. 1) to index to the fan control icon (Fig. 13). Use the Up/Down Arrow Keys (fig. 1) to turn on, off or adjust the fan speed (fig. 14). A single “beep” will confirm reception of the command.

Split Flow control**

The secondary burner is controlled by the split Flow. To activate this function use the Mode Key (fig. 1) to index to the SPLIT FLOW mode icon (fig. 17 & 18).

Pressing the Up Arrow Key will activate the secondary burner. Pressing the Down Arrow Key will turn the secondary burner off. A single “beep” will confirm the reception of the command.
Continuous Pilot/Intermittent Pilot (CPI/IPI) selection

Note: Power vent models do not have a Continuous Pilot option.

With the system in "OFF" position press the Mode Key (fig. 1) to index to the CPI mode icon (fig. 19 & 20).
Pressing the Up Arrow Key will activate the Continuous Pilot Ignition mode (CPI). Pressing the Down Arrow Key will return to IPI. A single "beep" will confirm the reception of the command.

KEY LOCK

This function will lock the keys to avoid unsupervised operation.
To activate this function, press the MODE and UP Keys at the same time (fig. 21).
To de-activate this function, press the MODE and UP Keys at the same time.

LOW BATTERY POWER DETECTION

Transmitter

The life span of the remote control batteries depends on various factors: quality of the batteries used, the number of ignitions of the appliance, the number of changes to the room thermostat set point, etc.
When the Transmitter batteries are low, a Battery Icon will appear on the LCD display of the Transmitter (Fig. 22) before all battery power is lost.
When the batteries are replaced this Icon will disappear.

Thermostat Icon: If the thermostat icon is not present on the remote transmitter, follow instructions noted below
1. Take one or all batteries out (removing one battery will work).
2. Press and hold down the Thermostat button on the remote.
3. Reinstall the 3rd battery while still holding thermostat button down.
4. If you see "Set" the thermostat option is now enabled. If you see "Clr" the thermostat option is now disabled
5. Repeat the procedure if you did not see the "Set" or "Clr" to remove or add the option back to the remote.

Enable all other functions if not present on the remote transmitter, follow instructions noted below:
1. Remove one battery or all batteries (removing one battery will work).
2. Press and hold both the ON/OFF and the MODE button at the same time .
3. Reinstall the 3rd battery while still holding both buttons (keep holding buttons once 3rd battery is installed, then release the mode button only.
4. The screen will show either "Clr" or "Set" with the 1st mode being your option to disable or enable.

Important: If set to CPI mode, the pilot will continue to run at all times but this will also cause the power vent blower to remain on at all times as a result of the pilot being on. Keep this set to IPI mode only. Never use CPI as it is not required when operating a power vented appliance.
Inner Glass Panel (Firebox Glass) Installation / Removal

To watch the firebox installation video click here.

Note: glass panels must be installed to operate fireplace

WARNING: GLASS HANDLING

We recommend using the glass vacuum holders supplied by the manufacturer. Lower the glass to rest in a safe place, this is to prevent damage to the glass edges. Extra care must be taken when removing/installing the glass. Breakage or damage to the edge of the glass which occurs as a result of careless handling will not be covered under warranty.

• We recommend handling the glass with supplied vacuum clamps
• When removing glass—prepare a soft, scratch resistant surface to place the glass
• Never clean or remove hot glass

Note: The suction cups may leave a round film on the glass when used. Ensure that the glass is cleaned using a fireplace glass cleaner prior to operating the appliance.

Important:
Prior to installing the inner glass, ensure that there is no media present in the bottom channel as this can cause damage to the glass. Remove any media from bottom channel prior to installing the glass.

1. Remove outer safety glass panels if previously installed—see instructions in this manual.

2. Remove outer panels installed in units - see panel removal section in this manual.

3. Ensure all 7 front clamps are in the open position to allow clearance for the glass.

4. Lift up the front panel using the supplied vacuum clamps and position into the lower front channel—ensure the front panel is accurately centered—with the front panel in position—secure in place by closing the 3 lower clamps and 4 upper clamps.

5. To remove the glass panels—always remove the side panel(s) (for 3 sided units) before removing the front panel.

6. Reverse steps to remove glass.

Press glass vacuum clamps in open position firmly onto surface of glass. Bring handles together to close.

Handle front panel with supplied vacuum clamps
Outer Safety Glass Panel (Barrier Glass) Installation / Removal

**WARNING: GLASS HANDLING**

We recommend using the glass vacuum holders supplied by the manufacturer. Lower the glass to rest in a safe place, this is to prevent damage to the glass edges. Extra care must be taken when removing/installing the glass. Breakage or damage to the edge of the glass which occurs as a result of careless handling will not be covered under warranty.

- We recommend handling the glass with supplied vacuum clamps
- When removing glass—prepare a soft, scratch resistant surface to place the glass
- Never clean or remove hot glass

**Note:** The suction cups may leave a round film on the glass when used. Ensure that the glass is cleaned using a fireplace glass cleaner prior to operating the appliance.

The outer glass safety panel to be installed during the initial installation after the unit is in the final position.

**Note:** The outer safety panel comes with plastic corners to protect these against damage. These should be kept in place until such time the outer safety panels are installed. Ensure these are removed prior to operating the appliance. Keep the plastic corners in a safe place if ever removing the outer panels for servicing.

1. Carefully remove glass safety panels from packaging.

Press glass vacuum clamp in open position firmly onto surface of glass. Bring handles together to close.

2. Using the supplied vacuum clamps, lift the large front glass panel and position it front and centre by manoeuvering up and underneath the front of the unit frame.

3. Tilt the top of the glass panel inward and lift up and underneath the upper front panel of the outside frame. Hook the glass panel onto the pins and also onto the two angle adjustment brackets located on the frame in two locations as shown in the diagram below.

**Note:** The front frame upper panel is shown as transparent to better illustrate the install (this area is not visible when installing glass).

**Note:** If the outer safety glass panel does not sit at 90° and angles too far inward or outward, remove the glass panel and adjust the screw of the panel angle bracket. Turn the panel angle bracket screw in 1/4 increments—reinstall panel to check.

**NOTE:** Inner glass panel shown in image - depicting proper handling of glass.
Maintenance Instructions

1. Always turn off the gas valve before cleaning. For relighting, refer to lighting instructions. Keep the burner and control compartment clean by brushing and vacuuming at least once a year. When cleaning the logs, use a soft clean paint brush as the logs are fragile and easily damaged.

2. Clean appliance and door with a damp cloth (never when unit is hot). Never use an abrasive cleaner. The glass should be cleaned with a gas fireplace glass cleaner. The glass should be cleaned when it starts looking cloudy.

3. The fireplace is finished in a heat resistant paint and should only be refinished with heat resistant paint. Regency® uses StoveBright Paint - Metallic Black #6309.

4. Make a periodic check of burner for proper position and condition. Visually check the flame of the burner periodically, making sure the flames are steady; not lifting or floating. If there is a problem, call a qualified service person.

5. The appliance and venting system must be inspected before use, and at least annually, by a qualified field service person, to ensure that the flow of combustion and ventilation air is not obstructed.

   Note: Never operate the appliance without the glass properly secured in place.

6. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

7. In the event this appliance has been serviced check that the vent-air system has been properly resealed & reinstalled in accordance with the manufacturer's instructions.

8. Verify operation after servicing.

General Vent Maintenance

Conduct an inspection of the venting system semi-annually. Recommended areas to inspect as follows:

1. Check the Venting System for corrosion in areas that are exposed to the elements. These will appear as rust spots or streaks, and in extreme cases, holes. These components should be replaced immediately.

2. Remove the Cap, and shine a flashlight down the Vent. Remove any bird nests, or other foreign material.

3. Check for evidences of excessive condensation, such as water droplets forming in the inner liner, and subsequently dripping out the joints. Continuous condensation can cause corrosion of caps, pipe, and fittings. It may be caused by having excessive lateral runs, too many elbows, and exterior portions of the system being exposed to cold weather.

4. Inspect joints, to verify that no pipe sections or fittings have been disturbed, and consequently loosened. Also check mechanical supports such as Wall Straps, or plumbers' tape for rigidity.

Log Replacement

The unit should never be used with broken logs. Turn off the gas valve and allow the unit to cool before opening door and carefully remove the logs. (The pilot light generates enough heat to burn someone.) If for any reason a log should need replacement, you must use the proper replacement log. The position of these logs must be as shown in the diagrams under Log Installation.

   Note: Improper positioning of logs may create carbon build-up and will severely alter the unit's performance which is not covered under warranty.

Glass Gasket

If the glass gasket requires replacement use a tadpole glass gasket (Part # 936-220).

Glass

Your Regency® fireplace is supplied with high temperature 5mm-Tempered outer glass & 5mm-Ceramic inner glass. If your glass requires cleaning, we recommend using an approved glass cleaner available at all authorized dealers. Do not use abrasive materials.

CAUTION & WARNINGS:

* Do not clean when the glass is hot.
* The use of substitute glass will void all product warranties.
* Care must be taken to avoid breakage of the glass.
* Do not strike or abuse the glass.
* Do not operate this fireplace without the glass front or with a cracked or broken glass front.
* Wear gloves when removing damaged or broken glass.
* Replacement of the glass panels should be done by a licensed or qualified service person.

Glass Replacement

In the event that you break your glass by impact, purchase your replacement from an authorized Regency dealer only. Replacement glass is shipped already installed into the door frame. Reinstall as per Glass Installation in the "Glass Installation" section.

REPLACEMENT GLASS:

CV40EPV
Outer Safety Glass - Tempered (Part# 940-435/P)
Inner Glass - Ceramic (Part# 940-434/P)

CV40EPV City Series
5.08: Modifications to NFPA-54, Chapter 10

(2) Revise 10.8.3 by adding the following additional requirements:

(a) For all side wall horizontally vented gas fueled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes, including those owned or operated by the Commonwealth and where the side wall exhaust vent termination is less than seven (7) feet above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied:

1. INSTALLATION OF CARBON MONOXIDE DETECTORS. At the time of installation of the side wall horizontal vented gas fueled equipment, the installing plumber or gasfitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed. In addition, the installing plumber or gasfitter shall observe that a battery operated or hard wired carbon monoxide detector with an alarm is installed on each additional level of the dwelling, building or structure served by the side wall horizontal vented gas fueled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard wired carbon monoxide detectors.

a. In the event that the side wall horizontally vented gas fueled equipment is installed in a crawl space or an attic, the hard wired carbon monoxide detector with alarm and battery back-up may be installed on the next adjacent floor level.

b. In the event that the requirements of this subdivision can not be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.

2. APPROVED CARBON MONOXIDE DETECTORS. Each carbon monoxide detector as required in accordance with the above provisions shall comply with NFPA 720 and be ANSI/UL 2034 listed and IAS certified.

3. SIGNAGE. A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print size no less than one-half (1/2) inch in size, "GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL OBSTRUCTIONS".

4. INSPECTION. The state or local gas inspector of the side wall horizontally vented gas fueled equipment shall not approve the installation unless, upon inspection, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CMR 5.08(2)(a) through 4.

(b) EXEMPTIONS: The following equipment is exempt from 248 CMR 5.08(2)(a) through 4:

1. The equipment listed in Chapter 10 entitled "Equipment Not Required To Be Vented" in the most current edition of NFPA 54 as adopted by the Board; and

2. Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

(c) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM PROVIDED. When the manufacturer of Product Approved side wall horizontally vented gas equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for installation of the equipment and the venting system shall include:

1. Detailed instructions for the installation of the venting system design or the venting system components; and

2. A complete parts list for the venting system design or venting system.

(d) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM NOT PROVIDED. When the manufacturer of a Product Approved side wall horizontally vented gas fueled equipment does not provide the parts for venting the flue gases, but identifies "special venting systems", the following requirements shall be satisfied by the manufacturer:

1. The referenced "special venting system" instructions shall be included with the appliance or equipment installation instructions; and

2. The "special venting systems" shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

(e) A copy of all installation instructions for all Product Approved side wall horizontally vented gas fueled equipment, all venting instructions, all parts lists for venting instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation.
Locating Your Gas Fireplace

1. When selecting a location for your fireplace, ensure that the clearances are met.

2. The appliance must be installed on a flat, solid, continuous surface. For example, wood, metal or concrete floor or in a raised (on the wall) application. The appliance must be installed on a metal or wood panel extending the full width and depth of the appliance.

3. The CV40EPV Direct Vent Gas Fireplace can be installed in a recessed position or framed out into the room as in A, B, C, D. See Diagram 1.

Methods of Installation

A) Flat on Wall-CV40EPV
B) Flat on Wall Corner-CV40EPV
C) Recessed into Wall/Alcove-CV40EPV
D) Corner-CV40EPV

4. For bedroom installations, check with local codes before installation. This appliance is offered with a remote control.

5. The CV40EPV Direct Vent Gas Fireplace is approved for alcove installations, see “Clearances” section for details.

6. We recommend that you plan your installation on paper using exact measurements for clearances and floor protection before actually installing this appliance. Have an authorized inspector, dealer, or installer review your plans before installation.

Note: For vent terminations refer to "Exterior Vent Termination Locations" section.

Unit Assembly Prior to Installation

Before you Start

The CV40EPV has 6 standoffs, 2 on each side and 2 at the back that need assembly before installation.

WARNING! Risk of Fire! Comply with all minimum clearances.

Side and Back Standoff Assembly CV40EPV

The standoffs are shipped in a flat position and must be folded into shape and attached.

Take each standoff off the unit by removing one screw and bend into the correct shape. Slot the 2 tabs of the stand off into the slots in the unit and attach the other end with one screw.

Nailing Strips CV40EPV

Nailing strips are shipped folded flat against the unit. Fold nailing strips out 90° before installing unit. Secure nailing strips to framing using wood or metal screws.
Levelling Bolts

There are four levelling bolts - two on each side that can be adjusted if required.

Access Panel Removal

The front access panel may be removed for ease of hooking up gas and electrical. Once complete ensure that the access panel is reinstalled prior to any finishing.
The CV40EPV has 4 screws to remove access cover. See locations in diagrams to the right.
**General Safety Information**

1. The appliance installation must conform with local codes or, in the absence of local codes, with the current Canadian or National Gas Codes, CAN1-B149 or ANSI Z223.1 Installation Codes.

2. See general construction and assembly instructions. The appliance and vent should be enclosed.

3. This appliance must be connected to the specified vent and termination cap to the outside of the building envelope. Never vent to another room or inside a building. Make sure that the vent is fitted as per Venting instructions.

4. Inspect the venting system annually for blockage and any signs of deterioration.

5. Venting terminals shall not be recessed into a wall or siding.

6. Any safety glass removed for servicing must be replaced prior to operating the appliance.

7. To prevent injury, do not allow anyone who is unfamiliar with the operation to use the fireplace.

8. Wear gloves and safety glasses for protection while doing required maintenance.

9. Be aware of electrical wiring locations in walls and ceilings when cutting holes for termination.

10. Under no circumstances should this appliance be modified. Parts that have to be removed for servicing should be replaced prior to operating this appliance.

11. Installation and any repairs to this appliance should be done by a qualified service person. A professional service person should be called to inspect this appliance annually. Make it a practice to have all of your gas appliances checked annually.

12. Do not slam shut or strike the glass door.

13. Under no circumstances should any solid fuels (wood, paper, cardboard, coal, etc.) be used in this appliance.

14. The appliance area must be kept clear and free of combustible materials, (gases and other flammable vapours and liquids).

**Installation Checklist**

1. Locate appliance. Refer to the following sections:
   a) Locating Your Fireplace
   b) Clearances
   c) Combustible Mantel Clearances
   d) Framing & Finishing
   e) Venting. See the “Venting Introduction” to Venting Arrangements sections.

2. Assemble Standoffs. Refer to the “Unit Assembly Prior to Installation” section. (NOTE: must be done before installing unit into fireplace.)

3. Install vent. See the “Horizontal Installations” to “Installation Procedures” sections.

4. Install 4 AA batteries into receiver battery box. Hook receiver to wiring marked receiver, this will enable operation of the appliance manually when in position “ON” position.

   **Note:** The wire harness (marked receiver) is located near the gas valve and will need to be routed to the exterior of the fireplace from either the left or right hand side of the appliance prior finishing.

5. Bring 120 volt power to appliance. Required to operate lights and highly recommended to operate gas valve. AA Batteries serve as back up only if 120 volt power is lost.

6. Make gas connections. Test the pilot. Must be as per diagram. Refer to the “Gas Line Installation” & “Pilot Adjustment” sections.

7. Install standard and optional features. Refer to the following sections where applicable:
   a. Safety Glass
   b. Firebox (inner) glass
   c. Log Set
   d. Fireglass
   e. Ceramic stones or other approved media
   f. Painted, enamel or glass panels (panels required)
   g. Optional Framing Kit
   h. HeatWave Kit

8. Plug 3 prong plug for the lights into the receptacle. The 3 prong plug will be located near the gas valve on the appliance.

Before leaving this unit with the customer, the installer must ensure that the appliance is firing correctly and operation fully explained to customer.

**Heatwave Duct System**

The HeatWave Air Duct Kit increases the effectiveness of your fireplace by dispersing warm air from the fireplace to remote locations in the same room or other rooms in your home.

Up to two kits may be installed on the fireplace.

**Please Note:** One adaptor kit #656-995 must be used with each 946-556.

The HeatWave Duct Kit has different clearance and framing requirements, check the HeatWave manual for details.
**Clearance CV40EPV**

The clearances listed below are minimum distances unless otherwise stated.

A major cause of chimney related fires is failure to maintain required clearances (air space) to combustible materials. It is of the greatest importance that this fireplace and vent system be installed only in accordance with these instructions.

**Clearance:** single sided  
**Dimension**  
**Measured From:**

<td>Gas Connection Opening Width</td>
<td>3-1/2” (89mm)</td>
</tr>
</tbody>
</table>

**Important:** Minimum overall vent run must be 4 feet. Even though centerline is 45 1/2”, if appliance is framed at minimum depth, the 4 feet of vent run could not be obtained. Center line will need to be increased in height in order to achieve a minimum vent run of 4 feet.

Note: A combined minimum of 120 square inches of open area is required for the convection air outlet to cool the enclosure. Ensure clearances for Convection Air Outlets are met.

See clearances CV40E (single sided) in this manual as there are different methods as to how this can be achieved.

**The framing depth/width does not take into account dry wall/wood or similar materials against the back/side wall. The framing depth will need to change based on the thickness of the material (example: B - 46 3/4” framing width + 1/2” drywall = 47 3/4”) (example: C - 19” framing depth + 1/2” drywall = 19 1/2”)

Note: This appliance must be installed on a solid surface such as a plywood floor which must be the full width and depth of the appliance.
Chase Vent Installation

Framed opening must be between 4” (102 mm) and 4.5” (114 mm) tall, and at least 42.25” (1073 mm) wide to accommodate the chase vent. The top of the chase vent opening must be 3” or less from the top of the chase enclosure.
Finish edges of drywall with trim or corner bead. Edge finish must not decrease opening area below 130 in (3.25" x 40") or (83 mm x 1016 mm).
C40 Chase Vent Installation Example

1. Frame opening for vent
   (See Vent Framing Clearances Page)

2. Screw Chase vent to Framing

3. Use at least 3 sets of screws
to keep the vent flat against framing

4. Frame wall with finishing material

5. If necessary, mark where the chase vent is located before fixing drywall in place

6. Cut hole in finishing material around inside of chase vent.
   Finish edges around opening
installation

Chase Venting

Note: The enclosure opening cannot be any lower than 0-3” from the top of the enclosure for all installations. Minimum height of enclosure from base of appliance is 63”.

A minimum 120in² opening in the enclosure is required to maintain safe operating temperatures. This can be achieved in a number of ways including the examples shown below.

Warning: DO NOT cover or place objects in front of the air outlet(s).

Regency Chase Vent Dimensions:
3.2”x 40” (81 mm x 1016 mm) (130in²)

Custom chase vent
Example dimensions: 2.5”x 48” (64 mm x 1219 mm) (120in²)

Reveal at the chase top
Example dimensions: 2”x 60” (51 mm x 1524 mm) (120in²)
Optional Front Grill Installation

This optional grill meets the requirement of the 120 square inches required for the enclosure in all installations and is designed to keep the enclosure cool.

To install the front grill - frame an opening of 4-3/8" H x 39-1/8" W (111 mm H x 994 mm W).

The finished facing material should be attached and be the same size as the framed opening to eliminate gaps. Install the grill and secure in place with one screw on either side, installed from the front.

Note: Front grill not used in conjunction with the steel stud framing kit.

Secure with screws from the front through the sides.
Wall Board/Drywall Installation

**WARNING!** Risk of Fire! Comply with all minimum clearances to combustibles as specified.

Finishing Instructions
It is important to follow the framing and finishing instructions to ensure proper placement of fireplace into the surrounding framing/finishing materials. Wall board materials 1/2 in. thick are specified in this installation manual to properly align with the optional finishing methods offered with this appliance. The CV40EPV may be finished to the appliance opening with 1/2 inch thick drywall.

- Ensure that the back and side clearances are maintained.

**WARNING!** Risk of Fire! Maintain specified air space clearances to combustibles. Inadequate air space could cause overheating and fire.

**DO NOT** use screws more than 3/4 inch in length on the lower access cover panel. Longer screws may penetrate gas line or damage valve or electrical components.

**Note:** It is acceptable to use a high temperature silicone sealant to adhere drywall to lower access cover panel.

The appliance is designed to be used with 1/2 in. wall sheathing materials such as drywall, plywood, wood composites, or non-combustible materials. Thicker materials may be used. Refer to facing and finishing details in this manual.

Facing Material
- Facing and/or finishing materials must never overhang into the glass opening.
- Facing materials may be combustible or non-combustible

**WARNING!** Risk of Fire! DO NOT apply combustible materials beyond the minimum clearances. Comply with all minimum clearances to combustibles as specified in this manual. Overlapping materials could ignite and will interfere with proper operation.

**PAINTING**
If desired finishing includes a painted wall, 100% acrylic latex, oil-based or standard acrylic paints may be used. Follow paint manufacturer's instructions for paint and primer application.

---

**SCREWS ONLY IN SHADED AREA**
**Framing and Finishing Inset Installations CV40EPV**

1. Frame in the enclosure for the unit with framing material.

**Note:** When constructing the framed opening ensure there is access to install the gas lines, electrical. Also the wiring harness must be wall mounted using the receptacle provided with the appliance. The wiring harness will be located on the right hand side of the appliance if facing the unit from the front. This must be done prior to any finishing.

2. For exterior walls, insulate the enclosure to the same degree as the rest of the house, apply vapour barrier and drywall, as per local installation codes. (Do not insulate the fireplace itself).

**WARNING:** Failure to insulate and add vapor barriers to the inside of the exterior wall will result in operational and performance problems including, but not limited to: excessive condensation on glass doors, poor flame package, carbon, blue flames etc. These are not product related issues.

Note that in all applications while there is a zero clearance to combustibles to the unit, all clearances to combustibles from the venting inside the chase still applies. Please see venting clearances in the specific product manual.

3. **IMPORTANT:** The interior chase (back and sides), regardless where appliance is placed within the home, also requires the use of drywall. All seams/joints MUST be sealed using drywall tape and mud. As this appliance has been designed with all hot air escaping through the enclosure using the ventilation grills, if hot air is trapped as a result of the hot air escaping through joints or other openings within the enclosure, this will change the clearances within the enclosure causing the enclosure to over heat.

4. Combustible material (drywall, wood, wood panels, etc.) may be brought up to the appliance (top, bottom and sides).

5. Ensure that the material being used does not encroach anywhere in the area of the glass. This would cause dangerous operating conditions.

6. This appliance comes with a 1/2" lip at top and bottom to hide the ends of the drywall. The 1/2" side and bottom lip supplied with the appliance can alternatively be removed (see Diagram 1) and replaced with J Style Trim or Metal Corner Bead purchased at your local hardware store to cover cut/exposed edges of the combustible facing material or any other finishing materials being used. 4 screws secure the bottom lip — see Diagram 1. These will be hidden so the outer panels will need to be removed to access the screws. See outer panel removal in this manual.

**Diagram 1 - Loosen 4 screws and lift off lower drywall guide**

**Note:** an offset screwdriver is provided with the appliance for ease of removal/installation.
installation

TV Recessed into Wall

Maximum TV Recess

- Max 3" (76 mm) to Top of Enclosure
- 120 in² min Chase vent opening
- Max 4 5/8" (117 mm) TV recess with drywall up against unit
- Max. 2 x 4 stud
- Max 5 1/8" (130 mm) Mantle
- Max 36" (914 mm) Hearth

4 5/8" (117 mm) maximum TV recess using 1/2" (13 mm) drywall

TV Flush with Hearth

- Max 3" (76 mm) to Top of Enclosure
- 120 in² min Chase vent opening
- Max 3" (76 mm) to Top of Enclosure
- Max. 2 x 4 stud
- Header Stud
- Screws must not penetrate unit more than 1/2" (13 mm).
- Adhere to "No Screw" zones painted on unit.
- Glue can be used as an alternative.

Flush wall TV recess using 1/2" (13 mm) drywall

CB40E shown
Wall Mount On / Off Switch and Battery Holder Installation
Required for all installations

**IMPORTANT INSTALLATION NOTE:**

The Battery Holder must be placed inside the supplied (Low Voltage) junction type wall box and installed into the wall only.

**DO NOT INSTALL WITHIN THE CONFINES OF THE FIREPLACE SWITCH MUST BE ACCESSIBLE**

**Battery Holder Installation**
1. Install the low voltage junction box to the framing, at desired location within 10-1/2 ft. from fireplace.
2. Feed the 6 pin connector wiring harness through the opening at back of junction box. The wiring harness is located near the gas valve and will need to be routed to the exterior of the fireplace from either the left or right hand side prior to finishing.
3. Connect the 6 pin connector to the back of the Battery Holder.
4. Install the Battery Holder in the Low Voltage Junction box.
5. Place the slider into the cover plate.
6. Put the Battery Holder switch in the “OFF” position, to allow correct lineup for slider switch.
7. Make sure the Battery Holder and cover plate words “ON” and “UP” are on the same side.
8. Align the slider with the switch on the Battery Holder and couple the switch into the slider.
9. Align the screw holes.
10. Using the two (2) screws provided secure the cover plate to the Battery Holder.
11. For coding instructions, see full details in this manual.

**Proflame Battery Holder**

1. In accordance with current CSA B149.1, Natural Gas and Propane Installation Code
2. In accordance with the current ANSI Z223.1/NFPA 54, National Fuel Gas Code
3. A vent shall not terminate directly above a sidewalk or paved driveway which is located between two single family dwellings and serves both dwellings
\* Permitted only if veranda, porch, deck, or balcony is fully open on a minimum of two sides beneath the floor
\† Clearance in accordance with local installation codes and the requirements of the gas supplier
\* 3 feet (91cm) within a height of 15 feet (4.5m) above the meter / regulator assembly
\* 3 feet (91cm) above - if within 10 feet (3m) horizontally
## 4" x 6-5/8" Rigid Pipe Cross Reference Chart

Components from different manufacturers may not be mixed. Not all rigid pipe components are available directly from FPI.

**IMPORTANT**: When using the inline Power Vent system & rigid pipe:

- Vertical Terminations: Only Simpson Duravent rigid pipe is approved for use. Must use the 46DVA-VCH vertical high wind cap as this is the only approved cap.
- Horizontal Terminations: Only the 946-523/P Astro horizontal cap may be used in conjunction with any of the vent systems noted below.

The gas power vent system is designed to allow the installation of a gas appliance when typical vent configurations (shown in this manual) are not possible. **Note:** The CV40EPV must be terminated horizontally. Vertical terminations are not permitted.

**Important:**
Maximum total vent length = 72' (21.95 m) maximum of six - 90° elbows permitted. One 90° elbow = two 45° elbows. Maximum total negative vent length = 7' (2.13 m).

**Note:** Maximum length of 72 feet (21.95 m) is based on overall length of combined chimney components. Do not run positive venting after a negative run.

### Vent Restrictor Position

Vent Restrictor factory set for the CV40EPV

- **Inline power vent location restrictions:**
  - Minimum 4 ft (1.22 m) from the unit
  - Minimum 1 ft (0.3 m) prior to an elbow.
  - Minimum 1 ft (0.3 m) following an elbow.
  - Minimum 1 ft (0.3 m) prior to a termination cap.

- **Inline power vent bypass setting:** Fully closed

---

**RIGID PIPE: MUST USE RIGID PIPE ADAPTOR 510-994**

Note: Rigid pipe is approved for up to 72 feet (21.95 m).

Note: Flex pipe is approved for up to 40 feet (12.19 m) using 2 X 946-756-- 20 foot flex kits.
**Venting Arrangements for Horizontal Terminations**

### Inline Horizontal Vent Chart

**RIGID PIPE:** MUST USE RIGID PIPE ADAPTOR 770-994 AND 946-606 PIPE REDUCER TO 4” X 6 5/8” (102 mm x 168 mm).
Note: Rigid pipe is approved for up to 72 feet (21.95 m).
**FLEX VENT:** MUST USE REDUCER 946-758 TO 4” X 6 5/8” (102 mm x 168 mm).
Note: Flex pipe is approved for up to 40 feet (12.19 m) using 2 X 946-756-20 foot (6.10 m) flex kits.

The gas power vent system is designed to allow the installation of a gas appliance when typical vent configurations (shown in this manual) are not possible.

**Note:** This model comes with a 5” (127 mm) inner and 8” (203 mm) outer collar which must be reduced to 4” x 6 5/8” (102 mm x 168 mm) in all applications. Must be terminated horizontally. Vertical terminations are not permitted.

---

**Vent Restrictor Position**

**Important:**
- Maximum total vent length = 72” (21.95 m) maximum of six - 90° elbows permitted.
- One 90° elbow = two 45° elbows.
- Maximum total negative vent length = 7’ (2.13 m).

**Note:** Maximum length of 72 (21.95 m) feet is based on overall length of combined chimney components.

Do not run positive venting after a negative run.

**Inline power vent location restrictions:**
- Minimum 4 ft (1.22 m) from the unit
- Minimum 1 ft (0.3 m) prior to an elbow
- Minimum 1 ft (0.3 m) following an elbow
- Minimum 1 ft (0.3 m) prior to a termination cap

When the inline blower is installed after a negative run, for every foot of negative run the inline power vent must be an equal distance or greater from the 90-degree elbow. See example above.

**Rigidity**

**Flex Pipe**
Venting Arrangement for Vertical Terminations - Inline Power Vent

Vertical venting with straight vertical venting and or with a max. of six (6) 90° Elbows (1 - 90° - 2 - 45°)

RIGID PIPE: MUST USE RIGID PIPE ADAPTOR 770-994 AND 946-606 PIPE REDUCER TO 4” X 6” 5/8” (102 mm x 168 mm)
Note: Rigid pipe is approved for up to 72 feet (21.95 m).
FLEX VENT: MUST USE REDUCER 946-758 TO 4” X 6 5/8” (102 mm x 168 mm).
Note: Flex pipe is approved for up to 40 feet (12.19 m) using 2 X 946-756–20 foot flex kits.

- Two 45° elbows equal to one 90° elbow.
- Vent must be supported at offsets.
- Minimum distance between elbows is 1 ft. (0.3 m).
- Maintain clearances to combustibles as listed in the “Clearances” section.
- Horizontal vents must be supported every 3 feet (0.91 m).
- Firestops are required at each floor level and whenever passing through a wall.

Restrictor set on 0 (fully open) regardless of vent run.

Inline power vent location restrictions:
- Minimum 4 ft (1.22 m) from the unit.
- Minimum 1 ft (0.3 m) prior to an elbow.
- Minimum 1 ft (0.3 m) following an elbow.
- Minimum 2 ft (0.61 m) prior to a termination cap.
- Minimum 2 ft. from inline PV to termination cap.
- Minimum 4’ from top of unit to inline PV.
- Max. of 72’ (21.95 m), using up to six 90° elbows
- (Note: example shows two 90° elbows).
- No negative runs.

Note: The inline power vent must be installed within the confines of the home/structure.
Vertical Inline Power Vent Terminations
Rigid Pipe

The minimum components required when using inline power vent are:

1. High Wind Cap
2. Rigid Pipe Adaptor (770-994)
3. Ceiling Firestop
4. Flashing
5. Storm Collar
6. Lengths of pipe to suit wall thickness & vent run (see chart)
7. Vent Reducer
8. Inline Power Vent Kit

Galvanized pipe is desirable above the roofline due to its higher corrosion resistance. Continue to add pipe sections through the flashing until the height of the vent cap meets the minimum height requirements specified in table below or local codes. Note that for steep roof pitches, the vertical height must be increased. A poor draft, or down drafting can result from high wind conditions near big trees or adjoining roof lines, in these cases, increasing the vent height may solve the problem.

### Roof Pitch vs Minimum Vent Height

**WARNING:**

Do not combine venting components from different venting systems.

This product has been evaluated by Intertek for using a Rigid Pipe Adaptor in conjunction with Duravent Direct-Vent, Selkirk Direct-Temp, Ameri Vent Direct Venting, ICC Excel Direct, Olympia Ventis DV, and Security Secure Vent systems. Use of these systems with the Rigid Pipe adaptor is deemed acceptable and does not affect the Intertek WHI listing of components.
Venting Arrangements for Vertical Terminations

Flex Pipe

FLEX VENT: MUST USE REDUCER 946-758 TO 4" X 6 5/8" (102 mm x 168 mm)

Note: Flex pipe is approved for up to 40 feet (12.19 m) using one 20 foot (6.10 m) flex kit (part # 946-755) and one 20 foot (6.10 m) flex kit extension (part # 946-756).

Inline power vent location restrictions:
- Minimum 4 ft (1.22 m) from the unit.
- Minimum 1 ft (0.3 m) prior to an elbow.
- Minimum 1 ft (0.3 m) following an elbow.
- Minimum 2 ft (0.61 m) prior to a termination cap.
- Minimum 2 ft. (0.61 m) from inline PV to termination cap.
- Minimum 4ft (1.22 m) from top of unit to inline PV.
- Max. of 72’ (21.95 m), using up to six 90° elbows
- (Note: example shows two 90° elbows).
- No negative runs.

Power Vent Kit (Part #666-945)
1 666-945 Power vent kit sold separately.
1 946-219/P Adaptor pipe included w/power vent kit.
1 946-755 20’ (6.10 m) Vertical Flex Kit (sold separately) includes: 20 ft. (6.10 m) flex pipe with 10 spacers (inner & outer pipe), 3 wall straps, ceiling firestop, roof brace, flex to rigid adaptor, roof support/brace, 36 in. (914 mm) rigid Duravent pipe, storm collar, high wind termination cap, hardware.
1 Max. 946-756 20’ (6.10 m) flex kit extension (sold separately).
1 946-758 Reducer (required - sold separately).
1 Power vent fan included w/power vent kit.
1 911-250/P 45’ (13.72 m) 5-wire BX cable (sold separately).
OR
1 911-251/P 90’ (27.43 m) 5-wire BX cable (sold separately).

Must also purchase one of the flashings listed below:
1 46DVA-F12 Flashing 7/12 - 12/12
1 46DVA-F6 Flashing 0/12 - 6/12
1 46DVA-FF Flat roof flashing
**Horizonal Terminations - Inline Power Vent**

4" x 6-5/8" Flex Vent

These venting systems, in combination with the CV40EPV Direct Vent Gas Fireplace, have been tested and listed as a direct vent heater system by Intertek. The location of the termination cap must conform to the requirements in the Vent Terminal Locations diagram in "Exterior Vent Termination Locations" section.

Regency® Direct Vent (Flex) System Termination Kits include all the parts needed to install the CV40EPV using a flexible vent.

**Notes:**

1. Only Flex pipe purchased from Regency® may be used for Flex installations
2. Horizontal vent must be supported every 3 feet (0.91 m).
3. Regency® Direct Vent System (Flex) is only approved for horizontal terminations.
4. Flex system can only be used up to a maximum vent length of up to 40 feet (12.19 m) using up to 2 x 20 ft (6.10 m) flex kits (part # 946-756). If longer runs are required, rigid pipe must be used.
5. Must use adaptor pipe (946-219/P) to connect inner flex pipe as shown.

Maximum total vent length = 72' (21.95 m) maximum of six-90° elbows permitted.
One 90° elbow = two 45° elbows
Maximum total negative vent length = 7' (2.13 m)

**Notes:**

- Maximum length of 72' (21.95 m) is based on overall length of combined chimney components.
- Do not run positive venting after a negative run.
- Inline power vent location restrictions:
  - Minimum 4 ft (1.22 m) from the unit
  - Minimum 1 ft (0.3 m) prior to an elbow.
  - Minimum 1 ft (0.3 m) following an elbow.
  - Minimum 1 ft (0.3 m) prior to a termination cap.
  - Minimum 6 ft (1.82 m) rise from top of unit if there is a negative run.

CV72EPV shown
Horizontal Terminations - Inline Power Vent
Rigid Pipe 4" x 6-5/8"

The minimum components required for a basic horizontal termination are:
1 Horizontal Termination Cap
1 Power Vent Kit
1 Rigid Pipe Adaptor
1 Vent Reducer
1 Length of pipe to suit wall thickness and total vent run
(see Table 1)

Adjustable pipe lengths/slips

Wall thickness is measured from the back standoffs to the inside mounting surface of termination cap. Create a level surface to mount the vent terminal. The Terminal must not be recessed into siding. Measure the wall thickness.

</tr>
</tbody>
</table>

Table 1

Important:
Maximum total vent length = 72' (21.95 m) with a maximum of six 90° elbows.
One 90° elbow = two 45° elbows.
Maximum total negative vent length = 7' (2.13 m).

Note: Maximum length of 72' (21.95 m) is based on overall length of combined chimney components.

Do not run positive venting after a negative run.

Inline power vent location restrictions:
Minimum 4 ft (1.22 m) from the unit
Minimum 1 ft (0.3 m) prior to an elbow.
Minimum 1 ft (0.3 m) following an elbow.
Minimum 1 ft (0.3 m) prior to a termination cap.
Minimum 6 ft (1.8 m) rise from top of unit if there is a negative run.

NOTE: Slip section is mandatory.
Horizontal Terminations - End of Line Power Vent
Rigid Pipe 4" x 6-5/8"

The minimum components required for a basic horizontal termination are:

1. Power Vent Kit
2. Rigid Pipe Adaptor
3. Length of pipe to suit wall thickness and total vent run (see Table 1)

Wall thickness is measured from the back standoffs to the inside mounting surface of termination cap. Create a level surface to mount the vent terminal. The Terminal must not be recessed into siding. Measure the wall thickness.

**NOTE:** *Slip section is mandatory.*
Inline Power Vent Dimensions

![Diagram of Inline Power Vent Dimensions]
Gas Power Vent Installation - Framing

Inline Power Vent Terminations

- The inline power vent can be mounted directly onto a wall, ceiling, stud or truss. Additional supports can be built to support the power vent if needed.
- The inline power vent can be oriented in any way if the access panel is accessible.

**NOTE:** The inline power vent will have a directional arrow which must be pointed away from the appliance.

**IMPORTANT:** The pressure switch must be oriented as shown below:

- **Diagram 1:** Inline power vent oriented vertically

- **Diagram 2:** Inline power vent oriented horizontally

**NOTE:** If the power vent is terminated vertically, no action is required for the pressure switch. If in a horizontal position, the pressure switch will need to be rotated. See instructions on next page.

Pressure switch orientation if inline power vent is oriented vertically (see Diagram 1)

Pressure switch orientation if inline power vent is oriented horizontally (see Diagram 2)
Power Vent Terminal Installation - Inline Power Vent Terminations

**IMPORTANT:** Pressure switch must always be oriented vertically inside the inline power vent.

**IMPORTANT:** The longer silicone tube is connected to the pressure switch side labelled "P" and the shorter silicone tube is connected to the side labelled "V".

To rotate the pressure switch in a horizontal position, follow the steps below:

1. Remove the 2 screws connecting the pressure switch mount to the mounting bracket.

2. Turn the mounting bracket 90 degrees, line up the holes and screw the bracket back onto the mount.
Gas Power Vent Installation Clearance Requirements

Inline Power Vent Terminations

Confined spaces (chase, closet, attic, behind a wall):

- 3” (76 mm) clearance is required on top of the power vent in a horizontal configuration (Diagram 2).
- 2” (51 mm) clearance is required on the sides and bottom in a horizontal configuration (Diagram 2).
- 1’ (0.3 m) clearance is required from the ends of the power vent in a horizontal configuration (Diagram 1).
- 2” (51 mm) clearance is required on sides in a vertical configuration (Diagram 2).
- 1’ clearance is required on ends in a vertical configuration (Diagram 1).
- A framed access hole with dimensions of 12” x 16” (305 mm x 406 mm) is required to access the access panel if the inline power vent is placed behind a wall (Diagram 3).
- The access hole can be covered with an open-air louver cover which allows 50% open air.
- The power vent must be installed where it can be easily accessed for servicing. An access hole as noted below, or an attic space, would be suitable.
Install the vent system according to the manufacturer's instructions included with the components.

1. Set the unit in its desired location. Check to determine if wall studs or roof rafters are in the way when the venting system is attached. If this is the case, you may want to adjust the location of the unit. Rough in the gas preferably on the right side of the unit and the electrical (junction block is on the left side) on the left.

2. Direct Vent pipe and fittings are designed with special twist-lock connections to connect the venting system to the appliance flue outlet. A twist-lock appliance adaptor is required.

3. In conjunction with the Approved Vent system, install the adaptor after the unit is set in its desired location. Put a bead of Mill-Pac inside the outer section of the adapter and a bead of Mill-Pac on the inner collar. Slip the adapter over the existing inner and outer flue collar. Fasten to the outer collar only with the 3 supplied screws (drilling pilot holes will make this easier).

4. Level the fireplace and fasten it to the framing using nails or screws through the top and side nailing strips.

5. Assemble the desired combination of pipe and elbows to the appliance adaptor and twist-lock for a solid connection.

Note: For best results and optimum performance with each approved venting system, it is highly recommended to apply Mill-Pac sealant (supplied) to every inner pipe connection. Failure to do so may result in drafting or performance issues not covered under warranty.

Horizontal runs of vent must be supported every 3 feet (0.9 meter). Wall straps are available for this purpose.

6. Mark the wall for a square hole. See chart to left for size. The center of the square hole should line up with the center-line of the horizontal pipe. Cut and frame the square hole in the exterior wall where the vent will be terminated. See diagram 2 for center line requirements.
installation

Unit Installation with Horizontal Termination - End of Line Power Vent
4" x 6-5/8" Flex Venting

Minimum Vent Clearances to Combustibles

*Clearances noted below must be maintained; except when passing through a wall, ceiling or at the termination where the use of a firestop or wall thimble reduces clearance to 1-1/2" (38mm).

| Horizontal Top* | 3" (76mm)* |
| Horizontal Side | 2" (51mm) |
| Horizontal Bottom | 2" (51mm) |
| Vertical Vent | 2" (51mm) |

Below are the recommended framing dimensions (inside measurements) for the 4" x 6-5/8" rigid vent terminations - for use with a firestop or wall thimble.

<table>
<thead>
<tr>
<th>Recommended Framed Opening Size</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vent Size</td>
</tr>
<tr>
<td>4&quot; x 6-5/8&quot;</td>
</tr>
</tbody>
</table>

1. Locate the unit in the framing, rough in the gas (preferably on the right side of the unit). Locate the centerline of the termination and mark wall accordingly. Cut an square hole in the wall - see chart (inside dimension).

2. Level the fireplace and fasten it to the framing using nails or screws through the nailing strips.

3. Assemble the vent assembly by applying Mill Pac to the inner flue collar of the termination and slipping the inner flex liner over it at least 1-3/8" (35mm). Fasten with the 3 screws (drilling pilot holes will make this easier). Apply Mill-Pac to the outer flex pipe and slip it over the outer flue collar of the vent terminal at least 1-3/8" (35mm) and fasten with the 3 screws.

4. Slip the assembled liner and termination assembly through the thimble making sure the termination cap faces up (there are markings on the cap indicating which way is up). This will position the termination cap with proper down slope for draining water. Fasten the cap to the outer wall with the 4 supplied screws.

5. Pull the centre inner and outer flex liner out enough to slip over the flue collars of the fireplace. (You may wish to cut the liner shorter to make it more workable.) Do not bend liner more than 90°. The liners must slip over the collars a minimum of 1-3/8".

6. Apply Mill Pac over the fireplace inner flue collar and slip the inner flex liner down over it and attach with 3 supplied screws.

7. Do the same with the outer flue collar and outer flex liner.

8. Apply a bead of silicone between the thimble and termination and around the outer edge of the terminal at the wall in order to keep the water out.

**IMPORTANT:** Do not locate termination hood where excessive snow or ice buildup may occur. Be sure to check vent termination area after snow falls, and clear to prevent accidental blockage of venting system. When using snow blowers, make sure snow is not directed towards vent termination area.

NOTE: Horizontal sections must be supported at intervals not exceeding 3 feet (0.9 meter). (Flame picture and performance will be affected by sags in the liner).
Vertical Inline Power Vent Termination

Rigid Pipe

Note: A top clearance of 3"(76mm) and side bottom clearance of 2" (51mm) must be maintained, except when passing through a wall or ceiling, or at the termination where a firestop or wall thimble reduces the required clearance to 1-1/2" (38mm). We recommend framing a 11"(279mm) x 11"(279mm) (inside dimensions) hole to give structural rigidity for mounting the termination.

1) Maintain the 1-1/2"(38mm) clearances (air spaces) to combustibles when passing through ceilings, walls, roofs, enclosures, attic rafters, or other nearby combustible surfaces, ensuring a firestop or wall thimble is used as noted above. Do not pack air spaces with insulation. Check the "Venting Arrangement - Vertical Termination" section for the maximum vertical rise of the venting system and the maximum horizontal offset.

2) Set the gas appliance in the desired location. Drop a plumb bob from the ceiling to the appliance flue exit and mark where the vent will penetrate the ceiling. Drill a small hole at this point. Next, drop a plumb bob from the roof to the hole drilled in the ceiling and mark where the vent will penetrate the roof. Determine whether ceiling joists, roof rafters, or other framing will obstruct the venting system. You may wish to relocate the appliance or to offset as shown in Diagram 2 to avoid cutting load bearing members.

3) A Firestop spacer must be installed in the floor or ceiling of every level.

4) Assemble the desired pipes and elbows. Ensure all pipes and elbow connections are twist-locked and sealed.

Note:
For best results and optimum performance with each approved venting system, “Mill-Pac” sealant is strongly recommended at every inner pipe connection. Failure to use Mill-Pac may result in drafting or performance issues not covered under warranty.

5) Cut a hole in the roof centered on the small hole drilled in Step 2. The hole should be sized to meet the minimum requirement of 1-1/2"(38mm) clearance to combustibles. Slip the flashing under the shingles (shingles should overlap half the flashing) as per Diagram 4.

6) Continue to assemble pipe lengths. Support the inline power vent to avoid excessive stress on the pipe and elbows. The inline power vent can be screwed onto existing studs for support.

Note: If an offset is needed in the attic, it is important to support the vent pipe at every 3 feet (0.9 meter) to avoid excessive stress on the elbows and possible separation. Wall straps are available for this purpose (Diagram 2).

Galvanized pipe is desirable above the roofline due to its higher corrosion resistance. Continue to add pipe sections through the flashing until the height of the vent cap meets the minimum height requirements specified in Diagram 5 or local codes. Note that for steep roof pitches, the vertical height must be increased.

Diagram 5 - The upper half of the flashing is installed under the roofing material and not nailed down until the chimney is installed, to allow for small adjustments.

A poor draft, or down drafting, can result from high wind conditions near big trees or adjoining roof lines. In these cases, increasing the vent height may solve the problem.

7) Ensure vent is vertical and secure the base of the flashing to the roof with roofing rails. Slide the storm collar over the pipe section and seal with a mastic.

8) Install and twist-lock the vertical termination cap.

Note: Any closets or storage spaces that the vent passes through must be enclosed.

<table>
<thead>

Diagram 6 – The upper half of the flashing is installed under the roofing material and not nailed down until the chimney is installed, to allow for small adjustments.

A poor draft, or down drafting, can result from high wind conditions near big trees or adjoining roof lines. In these cases, increasing the vent height may solve the problem.

Ensure vent is vertical and secure the base of the flashing to the roof with roofing rails. Slide the storm collar over the pipe section and seal with a mastic.

Install and twist-lock the vertical termination cap.

Note: Any closets or storage spaces that the vent passes through must be enclosed.

Diagram 7 - The upper half of the flashing is installed under the roofing material and not nailed down until the chimney is installed, to allow for small adjustments.

A poor draft, or down drafting, can result from high wind conditions near big trees or adjoining roof lines. In these cases, increasing the vent height may solve the problem.

Ensure vent is vertical and secure the base of the flashing to the roof with roofing rails. Slide the storm collar over the pipe section and seal with a mastic.

Install and twist-lock the vertical termination cap.

Note: Any closets or storage spaces that the vent passes through must be enclosed.
Vertical Inline Power Vent Terminations (Part 946-755)

Flex Pipe

Note: The roof flashing is not included with this kit and must be purchased separately.
Must choose 1 of the following:

<table>
<thead>
<tr>
<th>Part #</th>
<th>Description</th>

<tr>
<td>46DVA-F6</td>
<td>Flashing 0/12-6/12</td>
</tr>
<tr>
<td>46DVA-FF</td>
<td>Flat Roof Flashing</td>
</tr>
</tbody>
</table>

1. Maintain the 1-½” clearance (air space) to combustibles when passing through ceilings, walls, floors, enclosures, attic rafters or other nearby combustibles. Do not pack air spaces with insulation. Check Venting sections for the maximum vertical rise of the venting system and the maximum horizontal offset limitations.
Ensure that you maintain clearances around enclosures, walls, below or above floors, floor joists, etc. Each appliance has different clearance requirements (top, sides, bottom). See specific appliance manual for details.

2. Set the appliance in its desired position. Drop a plumb bob down from the ceiling/floor joist to the position of the appliance flue exit and mark the location where the vent will penetrate the ceiling. Drill a small hole at this point. Next drop a plumb bob from the roof to the hole previously drilled at the ceiling level and mark the spot where the vent will penetrate the roof.

3. Cut a hole in the roof centered on the small hole placed in the roof in the previous steps. The hole should be a minimum of 10-¼ inches. The hole may be round or square.

4. Slip the flashing under the shingles and line up flashing so it is centered to the hole (shingles should overlap half of the flashing) as per Diagram 1.

5. A ceiling firestop/firestop spacer must be installed when passing through each floor or ceiling level. To install the ceiling firestop/firestop spacer in a flat ceiling or floor joist cut a 10-¼ inch square hole. Frame the hole as show in Diagram 2 and install the ceiling firestop. Slide the top attic insulation spacer onto the top of the attic insulation shield/firestop - See Diagram 2a. Secure with 4 screws/nails. If more than one is required, these can be purchased separately.

Note: The ceiling firestop/firestop spacer may be cut down to size if this shield is too high for the application.

6. Determine the overall height of the chimney from the top of the appliance to the underside of the inline power vent. If required cut the flexible inner and outer pipe to the desired length up to a maximum of 20 feet.

7. Put a bead of Mill-Pac around the 4 inch collar on the appliance and slide the inner flex pipe over the inner collar of the appliance and secure with a minimum of 3 screws.

8. Install 4 inch spacers around 4 inch flex.

9. Repeat Step 7 to install the outer pipe to the outer collar of the appliance.

10. Repeat Step 7 to secure 4 inch flex to inline power vent. Repeat steps to attach outer collar to inline power vent.

Note: If an offset is necessary in the attic or floor joists it is important to support the vent pipe every 3 feet to avoid excessive stress and sagging of the vent pipe. Wall straps are provided (3 in total) for this purpose. All round/plumbers strapping may also be used if further supports are required.

11. Determine the overall height of the chimney from the top side of the inline power vent to the underside of the flashing. If required, cut the flexible inner and outer pipe to the desired length.

12. Put a bead of Mill-Pac around the inner pipe adaptor (supplied with the inline power vent) and attach the inner pipe adaptor to the inner collar of the inline power vent (see Diagram 3, next page).

13. Put a bead of Mill-Pac around the other end of the inner pipe adaptor and slide the 4” flex over the collar of the inner pipe adaptor; secure with 3 screws.

14. Install 4” spacers around 4” flex.

15. Put a bead of Mill-Pac around the outer collar of the inline power vent and slide outer pipe over the inline power vent; secure with 3 screws.

16. Attach the rigid pipe section to the flex to rigid adaptor using Mill-Pac on the inner/outer pipe. Use 3 screws to secure outer pipe.

17. Secure inner flex pipe to pipe adaptor using Mill-Pac over the adaptor. Slide the inner pipe over the flex to rigid adaptor and secure with 3 screws.

18. Repeat Step 17 to secure outer flex.
**Vertical Inline Power Vent Terminations**

**Flex Pipe**

19. Slide the finished length up towards the flashing ensuring the length of pipe is a minimum of 2 feet measured from the top of the roof. Level the chimney and secure using the roof support provided with kit to bottom side of the roof as shown using a minimum of 2 screws per side- see **Diagram 3b**. See **Diagram 4** for roof pitch and height requirements. See **Diagram 3a** for securing method if 2 ft is insufficient and additional lengths are required, this may be purchased separately. See Simpson Duravent components list in the instruction manual for part numbers.

</tbody>
</table>

20. Put a bead of caulkimg on the exterior between the outer pipe and flashing to prevent water from penetrating the chimney system.

21. Slide storm collar over pipe length until it reaches the flashing.

22. Install termination cap by twist locking it.

23. Secure the flashing to the roof using screws

**Note:** Any closets or storage spaces which the vent passes through must be enclosed.
Vertical Flue Extension Kit (Approved Models)

Horizontal Power Vent Kit (CV72EPV, CB72EPV, CB40EPV, CV40EPV, & CC40EPV)
(Part # 946-756)

Used in conjunction with the 946-755 Vertical Flex Kit for vertical installations or for horizontal installations when using the power vent option only where a maximum of 2 946-756 may be used up to a maximum of 40 feet (12.19 m). Only approved for power vent models for any horizontal termination.

1. Stretch out both inner 4" (102 mm) and outer 6 7/8" (175 mm) pipe up to a maximum of 20 feet (6.10 m).

   **Note:** The inner and outer pipes may be cut if only a short length is required.

2. Install spring spacers around 4" (102 mm) inner pipe as shown. Slide outer flex pipe over and all the way down the 4" pipe.

3. Apply a bead of Mill Pac around the perimeter of the 4" (102 mm) inner collar of the flex adapter and slip the 4" (102 mm) inner flex pipe from the Vertical termination kit over the flex adapter ensuring that the inner flex pipe overlaps the collar by at least 1-3/8" (35 mm). Fasten with 3 screws.

4. Apply a bead of Mill Pac around the perimeter of the 6-7/8" (175 mm) outer collar of the flue adapter and slip it over the 6-7/8" (175 mm) outer flex pipe from the vertical termination kit ensuring that the outer flex pipe overlaps the collar by at least 1-3/8" (35 mm). Fasten with the 3 screws.

5. Repeat steps to secure the other end of the flex adapter using the flex kit.

6. See Vertical Vent installation instructions or horizontal power vent installation instructions for installation of the complete vent system.

   **Note:** If an offset is necessary in the attic or floor joists it is important to support the vent pipe every 3 feet (0.91 m) to avoid excessive stress and sagging of the vent pipe. Wall straps are provided (3 in total) for this purpose.

   All round/plumbers strapping may also be used if further supports are required.
Ceiling Firestop / Firestop Spacer (Part 946-757)

Used in conjunction with the 946-755 Vertical flex kit and 946-756 kit Vertical flex extension kit/Horizontal power vent kit.

A ceiling firestop/firestop spacer must be installed when passing through each floor or ceiling level. To install the ceiling firestop/firestop spacer in a flat ceiling or floor joist cut a 10-⅛ inch square hole. Frame the hole as show in Diagram 1 and install the ceiling firestop. Slide the top attic insulation spacer onto the top of the attic insulation shield/firestop - See Diagram 1a. Secure with 4 screws/nails. If more than one is required, these can be purchased separately.

Note: The ceiling firestop/firestop spacer may be cut down to size if this shield is too high for the application.
Gas Power Vent Installation - Wiring the Inline Power Vent to the Unit

**WARNING**

ELECTRICAL CONNECTIONS SHOULD ONLY BE CARRIED OUT BY A QUALIFIED AND LICENSED ELECTRICIAN

**NOTE:** Must be mounted to the framing prior to wiring.

1. Remove the four screws and the cover plate.

2. Feed BX cable through the strain relief.

3. Tie the supplied zip tie loosely as shown below and pop it into the wall of the power vent box. Bring blue/red wires from the BX through the zip tie.

4. Install the second zip tie loosely on the bracket behind the pressure switch. Run the motor wires through the zip tie.

5. Connect ground wire to ground lug located on the side wall of the power vent box.

6. Connect wires from pressure switch to wires from BX cable - red to red and blue to blue. Cap paired wires with supplied marrette. Bundle and tighten zip tie installed in Step 3.

**NOTE:**

After exposure to heat, white wire will appear yellow and blue wires will appear green.

8. Reinstall cover plate with 4 screws.

**NOTE:** Pressure switch must always be oriented vertically inside the inline power vent.

**NOTE:**

Cut off existing connectors from fan motor and strip back to expose wires before connecting.
Gas Power Vent Installation - Wiring End of Line Power Vent

1. Frame an opening to the outside of the building at 13-1/2" W x 13-1/2" H to accommodate the Power Vent.

2. Run the venting and BX cable from the unit to the framed opening.

3. Install the strain relief (supplied) to the back of the Power vent mount box.

4. Strip the sheath from the BX cable to expose approximately 8" of exposed wires.

5. Feed the BX cable through the strain relief installed in Step 3.

6. Determine the building finishing material thickness.

7. Depending on the building material thickness, install the frame onto the Power Vent mount using 4 screws. Mounting holes start at 2" from the front of the Power Vent unit cover and can be adjusted back in 3/4" increments.

NOTE: Exterior finishes such as thin vinyl siding may warp if closer than 2" from them vent. For interior installations on vinyl siding, a 2" frame/buffer zone must be created between the finishing and the vent.

8. Install Power Vent unit into framed opening using 4 screws as shown below.

9. Seal the edges of the Power Vent unit to the framing (there are two seams).

WARNING
ELECTRICAL CONNECTIONS SHOULD ONLY BE CARRIED OUT BY A QUALIFIED AND LICENSED ELECTRICIAN

ELECTRICAL CONNECTIONS SHOULD ONLY BE CARRIED OUT BY A QUALIFIED AND LICENSED ELECTRICIAN
Gas Power Vent Installation - Wiring End of Line Power Vent

10. Remove front faceplate from power vent unit by removing 4 screws as shown below.

11. Loosen 4 screws in locations shown below, lift rain guard off screws (key hole slots).

12. Inside the power vent box--connect the blue and red wires to the pressure switch as shown below.

13. Bundle the wires together with the supplied grommet and pop the grommet with wires into the bracket on the roof of the power vent box.

14. Install the second grommet onto the wires and secure grommet and wires into a bracket located on the side of the power vent box.

15. Connect ground wire to ground lug located at back of power vent box.

16. Connect wires from pressure switch to wires from BX cable--red to red and blue to blue. Cap paired wires with supplied marrette.

17. Connect remaining wires from the power vent motor to the BX cable- black to black and black to white. Cap paired wires with supplied marrette.

**NOTE:** After exposure to heat--white wire will appear yellow -- blue wires will appear green.

18. Reinstall rain guard and tighten screws.

19. Reinstall front faceplate with 4 screws.

**Note:** This power vent cap can be serviced externally or internally. If access to the exterior is not possible once installed due to height/location of the termination location, it is highly recommended that an access panel be placed near the rear of the termination inside of the enclosure where the power vent cap is located. The access panel should be large/close enough to be able to service the power vent cap. See maintenance section of manual to see how servicing is completed internally.
Gas Power Vent Installation - Wiring the Power Vent to the Unit

Access panel removal

1. Remove front access panel for ease of hooking up gas and electrical. Once complete ensure that the access panel is reinstalled prior to any finishing. The CC40LEPV/CC40REPV.CV40EPV all have 4 screws to remove access cover and the CB40 has 8 screws to remove cover. See locations in diagrams below.

2. Install strain relief and nut as shown below. Ensure that the nut is placed on the inner portion of firebox with strain relief on the outer for ease of securing BX cable.

3. Bring the BX cable through the strain relief as shown below. An overall length of approx. 22" (559mm) should be brought through.

4. BX cable -- bare approx. 6-8" of wire from the sheathing as shown below. Strip ends of each individual wire.

5. Locate the 4 wires at the IFC control board wiring harness (blue,red,black white wires) and strip ends of each wire if not already stripped.
6. Secure wires from both the BX cable and IFC wiring harness using supplied wire marrettes.
   - blue to blue
   - red to red
   - black to black
   - white to white

7. Remove IFC cover by loosening 2 screws. Move slightly to the left and out.

8. Attach ground wire from BX cable to existing ground lug located on the left hand side of the IFC Control board using supplied locker washer and nut.

9. Tuck the 4 completed wires neatly next to the IFC board as shown below.

10. Secure BX cable to unit floor with supplied clamp as shown below.

11. Secure BX cable to clamp by tightening the screws as shown below.
12. Reinstall IFC cover removed in Step 7.

13. Once wiring is complete, plug unit into power located on the left side of the unit to junction box.

14. Reinstall access panel removed in Step 1.
installation

**High Elevation**

This unit is approved for altitude 0 to 4500 ft. (CAN1 2.17-M91).

**Gas Line Installation**

Since some municipalities have additional local codes it is always best to consult with your local authorities and the CAN/CGA B149 installation code.

For USA installations follow local codes and/or the current National Fuel Gas Code, ANSI Z223.1.

When using copper or flex connectors use only approved fittings. Always provide a union so that gas lines can be easily disconnected for servicing. Flare nuts for copper lines and flex connectors are usually considered to meet this requirement.

**NOTE:** A shutoff / dante valve should be supplied in or near the unit (or as per local codes) for ease of servicing this appliance.

**IMPORTANT:** Always check for gas leaks with a soap and water solution or gas leak detector. Do not use open flame for leak testing.

**Pilot Adjustment**

Periodically check the pilot flames. Correct flame pattern has two strong blue flames: 1 flowing around the flame sensor and 1 flowing across the burner (it does not have to be touching the burner).

![Burner flame diagram]

Flame Sensor

![Pilot and Ignitor]

**Note:** If you have an incorrect flame pattern, contact your Regency® dealer for further instructions.

Incorrect flame pattern will have small, probably yellow flames, not coming into proper contact with the rear burner or flame sensor.

**Gas Pipe Pressure Testing**

The appliance must be isolated from the gas supply piping system by closing its individual manual shut-off valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psig (3.45 kPa). Disconnect piping from valve at pressures over 1/2 psig.

The manifold pressure is controlled by a regulator built into the gas control, and should be checked at the pressure test point.

**Note:** To properly check gas pressure, both inlet and manifold pressures should be checked using the valve pressure ports on the valve.

1. Make sure the unit is in the “OFF” position.
2. Loosen the “IN” and/or “OUT” pressure tap(s), turning counterclockwise with a 1/8″ wide flat screwdriver.
3. Attach manometer to “IN” and/or “OUT” pressure tap(s) using a 5/16″ ID hose.
4. Turn the unit on with the remote or wall switch.
5. The pressure check should be carried out with the unit burning and the setting should be within the limits specified on the safety label.
6. When finished reading manometer, turn off the unit, disconnect the hose and tighten the screw (clockwise) with a 1/8″ flat screwdriver. **Note:** Screw should be snug, but do not over tighten.

**885 S.I.T. Valve Description**

1) 6 Stage flame adjustment
2) Pilot adjustment
3) Outlet Pressure Tap
4) Inlet Pressure Tap
5) Pilot Outlet
6) Main Gas Outlet
7) Main Gas Inlet

![885 S.I.T. Valve Diagram]

**Note:** If you have an incorrect flame pattern, contact your Regency® dealer for further instructions.

Incorrect flame pattern will have small, probably yellow flames, not coming into proper contact with the rear burner or flame sensor.
Wiring Diagrams-Power Vent Application

120 Volt AC power is required. A receptacle box, receptacle and cover are provided and located on the right hand side of the unit, under the outer base panel.

Electrical power must be brought to the appliance by a licensed electrician.

(Do not cut the ground terminal off under any circumstances.)

Caution: Ensure that the wires do not touch any hot surfaces and are away from sharp edges.

---

This appliance is equipped with a three-prong (grounding) plug for your protection against shock hazard and should be plugged directly into a properly grounded three-prong receptacle. Do not cut or remove the grounding prong from this plug.

---

CAUTION: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation.
Inner Glass Panel (Firebox Glass) Installation / Removal

To watch the firebox installation video click here.

Note: glass panels must be installed to operate fireplace

WARNING: GLASS HANDLING

We recommend using the glass vacuum holders supplied by the manufacturer. Lower the glass to rest in a safe place, this is to prevent damage to the glass edges. Extra care must be taken when removing/installing the glass. Breakage or damage to the edge of the glass which occurs as a result of careless handling will not be covered under warranty.

- We recommend handling the glass with supplied vacuum clamps
- When removing glass—prepare a soft, scratch resistant surface to place the glass
- Never clean or remove hot glass

Note: The suction cups may leave a round film on the glass when used. Ensure that the glass is cleaned using a fireplace glass cleaner prior to operating the appliance.

Important:
Prior to installing the inner glass, ensure that there is no media present in the bottom channel as this can cause damage to the glass. Remove any media from bottom channel prior to installing the glass.

1. Remove outer safety glass panels if previously installed—see instructions in this manual.

2. Remove outer panels installed in units - see panel removal section in this manual.

3. Ensure all 7 front clamps are in the open position to allow clearance for the glass.

4. Lift up the front panel using the supplied vacuum clamps and position into the lower front channel—ensure the front panel is accurately centered—with the front panel in position—secure in place by closing the 3 lower clamps and 4 upper clamps.

Press glass vacuum clamps in open position firmly onto surface of glass. Bring handles together to close.

5. To remove the glass panels—always remove the side panel(s) (for 3 sided units) before removing the front panel.

6. Reverse steps to remove glass.

Handle front panel with supplied vacuum clamps

Press glass vacuum clamps in open position firmly onto surface of glass. Bring handles together to close.

Handle front panel with supplied vacuum clamps

Press glass vacuum clamps in open position firmly onto surface of glass. Bring handles together to close.

Press glass vacuum clamps in open position firmly onto surface of glass. Bring handles together to close.

Press glass vacuum clamps in open position firmly onto surface of glass. Bring handles together to close.

Press glass vacuum clamps in open position firmly onto surface of glass. Bring handles together to close.
Outer Safety Glass Panel (Barrier Glass) Installation / Removal

To watch the safety barrier glass installation video click [here](#).

**Note:** Safety glass panels must be installed to operate fireplace.

### WARNING: GLASS HANDLING

We recommend using the glass vacuum holders supplied by the manufacturer. Lower the glass to rest in a safe place, this is to prevent damage to the glass edges. Extra care must be taken when removing/installing the glass. Breakage or damage to the edge of the glass which occurs as a result of careless handling will not be covered under warranty.

- **We recommend handling the glass with supplied vacuum clamps**
- **When removing glass—prepare a soft, scratch resistant surface to place the glass**
- **Never clean or remove hot glass**

**Note:** The suction cups may leave a round film on the glass when used. Ensure that the glass is cleaned using a fireplace glass cleaner prior to operating the appliance.

The outer glass safety panel to be installed during the initial installation after the unit is in the final position.

**Note:** The outer safety panel comes with plastic corners to protect these against damage. These should be kept in place until such time the outer safety panels are installed. Ensure these are removed prior to operating the appliance. Keep the plastic corners in a safe place if ever removing the outer panels for servicing.

1. Carefully remove glass safety panels from packaging.

Press glass vacuum clamp in open position firmly onto surface of glass. Bring handles together to close.

2. Using the supplied vacuum clamps, lift the large front glass panel and position it front and centre by manoeuvring up and underneath the front of the unit frame.

3. Tilt the top of the glass panel inward and lift up and underneath the upper front panel of the outside frame. Hook the glass panel onto the pins and also onto the two angle adjustment brackets located on the frame in two locations as shown in the diagram below.

**Note:** The front frame upper panel is shown as transparent to better illustrate the install (this area is not visible when installing glass).

**NOTE:** Inner glass panel shown in image - depicting proper handling of glass.

To watch the safety barrier glass installation video click [here](#).

**Note:** If the outer safety glass panel does not sit at 90° and angles too far inward or outward, remove the glass panel and adjust the screw of the panel angle bracket. Turn the panel angle bracket screw in 1/4 increments—reinstall panel to check.
LP Conversion Instructions

WARNING
This conversion kit shall be installed by a qualified service agency in accordance with the manufacturer’s instructions and all applicable codes and requirements of the authority having jurisdiction. If these instructions is not followed exactly, a fire, explosion or production of carbon monoxide may result causing property damage, personal injury or loss of life. The qualified service agency is responsible for the proper installation of this kit. The installation is not proper and complete until the operation of the converted appliance is checked as specified in the manufacturer’s instructions supplied with the kit.

Conversion Kit 657-977 includes:
- 1 911-191 Stepper Motor LP for 885 SIT
- 1 904-947 Orifice #53
- 1 910-037 Pilot Orifice #30
- 1 918-590 Decal - Conversion to LP
- 1 908-528 Label Propane
- 1 904-529 5/32” long Allen Key
- 1 920-040 Instruction Sheet

Caution: The gas supply shall be shut off prior to disconnecting the electrical power, before proceeding with the conversion.

Always let the appliance cool to room temperature before servicing.

1. Remove the outer panels and safety glass — see manual.
2. Remove inner ceramic glass — see manual.
3. Remove inner panels — see manual.
4. Remove all media installed on burner (glass, logs or stones, etc).
5. Disconnect the Cable coming from the Pressure Regulator Motor.
6. If unable to access this Cable - undo 2 screws securing the IFC Board and slide out of unit to access cable.

7. Remove and discard 2 Pressure regulator screws (A) using a (T20 or slot screwdriver,) Pressure Regulator (B) and Spring and Diaphragm (C) (see below).
8. Ensure the rubber gasket, which is prefitted as part of the Assembly, is properly positioned. Install the new Pressure Regulator using the 2x M4 x .7 screws supplied. Tighten the screws to 25lb-in. In the event that the screw threads are cross threaded or stripped, replace the valve assembly.

Install the enclosed propane identification label to the valve body where it can be easily seen.

9. Re-attach the Pressure Regulator wire (disconnected in Step 6), and re-situate the IFC, secure the screws that fasten the IFC Mounting Brackets.
10. Remove pilot hood by lifting up and off.
11. Loosen 4 screws in locations shown below (2 at front and 2 at rear)—slide burner to the left away from the orifice and lift out.

12. Remove burner orifice with a 3/8” wrench. Use another wrench to hold on to the elbow behind the orifice. Discard orifice. Reinstall new burner orifice LPG stamped #53 and tighten.

13. Remove pilot retainer clip with pliers and pull off the pilot cap to expose the pilot orifice.

14. Unscrew the pilot orifice with the allen key; then replace with the LPG pilot orifice and the pilot cap, provided in the kit.

15. Reinstall pilot cap and pilot retainer clip.

16. Prior to installing burner—adjust aeraations settings - to 1/4” for LP/(CB40E/CC40E/CV40E/CB40EPV/CV40EPV/CC40EPV) or 3/8” (CB40E-1/CC40E-1/CV40E-1) Reinstall burner (see Step 13).

17. Ensure the pilot light is in the correct orientation to the Burner. Reconnect the gas and electrical supply to the appliance. Start the appliance. (see section on Lighting Instructions) Ensure that pilot and burner ignition is completed without delay. Check both your inlet and outlet pressures at full load. With a soapy solution, leak test the entire system. Verify both the correct flame and pilot appearance.

City Series
LP SYSTEM DATA

| Min. Supply Pressure | 11” WC (2.73kpa) |
| Manifold Pressure - High | 10.5” WC (2.62 kpa) |
| Manifold Pressure - Low | 2.9” WC (0.72 kpa) |
| Orifice Size | #53 DMS |
| Maximum Input | 28,500 Btu/h (8.35 kW) |
| Minimum Input | 15,500 Btu/h (4.54 kW) |
| Altitude | 0-4500 ft (0-1372m) |

Installer Notice:
These instructions must be left with the appliance.
Clean Trim Faceplate Installation

1. Frame in fireplace and install finishing material. (Clean Trim Faceplate can accommodate finishing materials for 1/2 inch to 1 1/8").

2. Prior to installing outer liner panels and barrier glass remove finishing trim plates from right and left sides.

3. Insert Clean Trim Faceplate into fireplace opening.

4. Hand bend attachment tabs so they bend past the magnets to the metal wall inside the opening.

5. Affix Clean Trim Faceplate with self-tapping screws that are included in the box.
CV40E Painted Panel Installation

Inner Panels-CV40EPV

The CV40E can be equipped with optional steel inner panels. CV40E - 3 outer panels and 4 inner panels.

1. Install inner base panels as shown.

2. Manoeuvre in back panel to the back wall of the unit.

3. Install panel bracket into the slot in the panel.

4. Slide the panel and bracket into the unit until it contacts the back panel.

5. When side panel is in position, secure in place with one screw. The side panel, once installed will hold the back panel in position.

6. Repeat steps 2-4 to install opposite panel.

7. Reverse steps to remove panels.

Outer Panels-CV40EPV

1. Attach Regency logo to the right hand side of outer front panel. The magnets will be positioned under the outer front base panel to secure the logo. Install outer front base panel.

2. Install side panel - the side panel is secured in place by existing magnets in the unit.

3. Reverse steps to remove panels.

The CV40E can be equipped with optional steel inner panels. CV40E - 3 outer panels and 4 inner panels.

Turn off unit and allow to cool to room temperature. Remove the safety glass and firebox glass — see manual for instructions.
CV40EPV Glass Panel Installation

1. Turn off unit and allow to cool to room temperature. Remove the safety glass and firebox glass — see manual for instructions.

   Note: The screws to secure all of the clips in these instructions will be already be on the appliance. Simply remove and reinstall to secure all of the clips.

2. Identify panels and order of installation.

   *Panel 3 - 1 metal panel
   - 1 glass panel

3. Install back corner panels (1, 2) - seat smallest panel in back left corner, repeat on other side.

4. Install bottom corner ‘securing bracket’ as shown. Repeat step for other side.

5. Install metal panel (3) into of front firebox panel.

6. Install glass panel (3) on top of the metal panel.

7. Install one of the back panel brackets loosely with one screw (leave the bracket loose to allow room to install the back panel behind it).

8. Carefully manoeuvre the back glass panel (4) to the back wall of the firebox. Centre the glass panel at the back of the firebox positioning underneath the loosely installed bracket — once in position, slide the bracket in position on the opposite side and tighten both brackets in place with one screw each.

9. With the back panel installed, slide in one of the side glass panels (6). Push the panel all the way to the back of the firebox ensuring that the glass is sitting on the bottom corner bracket installed in step 4. Attach top rear bracket as shown. Note: There is a left and right bracket. The left bracket is shown below.

10. Install side panel bracket as shown and secure with one screw.

11. Repeat steps 9-10 for other side. Clean all fingerprint marks prior to next step.

12. Install media and inner firebox glass prior to next step.

13. Install outer front panel (1) as shown. Secure Regency logo to underside of outer front panel. The logo is simply held in with magnets.

14. Install outer side panels (8, 9) — these panels are held in position with magnets. Clean all fingerprint marks on outer side and bottom panels prior to next step.

15. Reinstall the Outer Safety Glass.
Black Enamel Panels — Handling Instructions

- Black Enamel panels must be inspected for scratches and dimples prior to installation. All claims to be recorded at this time. Claims for damage after installation will not receive consideration.

- Black Enamel panels will discolor a little during normal operation. This is normal and should not be considered a defect.

★ All hand and finger marks MUST be cleaned off with a soft cloth. Use an ammonia based cleaner (ie. glass cleaner) to remove any fingerprints before applying heat to the unit. Failure to do this will result in burn stain on panels which you will be unable to remove.

*Not protected by product warranty.

CV40 Enamel Panel Installation

### CV40 inner panel installation

1. Turn off unit and allow to cool to room temperature. Remove the safety glass and firebox glass — see manual for instructions.

2. Install enamel inner firebox base panel as shown.

3. Install back enamel panel - manoeuvre panel into unit and position panel at back wall of firebox.

   **NOTE:** Side panels when secured, will hold back panel in position.

4. With back panel in position — install side panel. Place panel bracket into slot located at top of panel. Place panel and bracket in unit against the side wall. Slide keyhole bracket (installed in panel) over screw in unit to secure side panel.

5. Repeat on opposite side.

### CV40 outer panel installation

1. Turn off unit and allow to cool to room temperature. Remove the outer safety glass — see manual for instructions.

2. Attach Regency logo to the right hand side of outer front panel. The magnets will be positioned under the outer front base panel to secure the logo. Install outer front base panel.

3. Install side panel - the side panel is secured in place by existing magnets in the unit.

4. Reinstall outer safety glass.
1. Construct the sealed rear enclosure to specified width shown below and desired height (see unit manual for detailed framing instructions).

2. Locate mounting holes in locations shown below and remove nailing strips (if already installed).

3. Attach left and right base panels using 2 screws on each side.

4. Move unit into framed opening at desired height and level unit on all sides. Connect gas and electrical (see manual).

5. Install a second stud as shown. The distance from first to second stud should be 8-1/2".

6. Secure base panels in place with 5 screws on each side.
7. Install venting before proceeding (see unit manual for details).

8. Finish the wall with desired finishing material and install rear enclosure venting (see manual for finishing/venting requirements).

9. Finish up to the dashed line on the base part—**DO NOT** finish past this line.

10. Install inner panels (refer to instructions in unit manual).

11. Install glass panels onto base panels (glass panels are secured in place with magnets).

12. Glass panels should overlap with outer side liner panel as shown below.

**NOTE:** Remove side liner panel and extended view panel to access firebox.
installation

Burner and Firebox Media Options

Spread the media evenly over the burner. Ensure the glass/stones do not overlap excessively as this will affect the flame pattern.

IMPORTANT NOTE:
Only the supplied approved media are to be used with these fireplaces. Use of any other type of glass or stones can alter the unit's performance. Any damage caused by the use of any unapproved glass or stones will not be covered under warranty.

When using Ceramic Spa/Volcanic Stones ensure required glass crystals/beads are used as a base. **DO NOT** overstack Ceramic Spa Stones or Volcanic Stones on burner or in the pilot area. Media must be installed on and around burner only in amounts noted below.

<table>

* Media not supplied with unit - must be purchased separately.
Optional Driftwood Log Set Installation

Read the instructions below carefully and refer to the images. If the logs are broken do not use the unit until they are replaced. Broken logs can interfere with pilot operation.

Improper positioning of the logs may create carbon build-up and can alter the unit’s performance which is not covered under warranty.

*Dark brown paint is included if touch ups are required.

1. Shut off gas and electrical supply, allow unit to cool to room temperature.

2. Remove safety glass and firebox glass (see manual).

3. Carefully remove the logs from the packaging and unwrap them. The logs are fragile, handle with care—never force into position.

4. Install Black Fireglass (1.5lb) and glowing wool on the burner as shown below.

5. Clip on the log guides - position the rear guides by centering over the second and fourth vertical lines at the back of the burner. The front log guide clips on to the front edge of the burner on the right side as shown below.

6. Centre Log 1 and rest on installed rear log guides—with pins facing up.

7. Position Log 2 on the burner—the longest point of Log 2 should sit level at the left edge of the burner — the other end of the log on a slight diagonal to the front of the firebox as shown.
8. Place the split end of Log 3 to the right front corner of the burner—angle the log so that the other end is sitting approximately 1/2" (13mm) from the edge of the burner tray.

9. Place Log 6 and Log 7 on the burner locations shown below.

10. Before placing the next log—spread the optional media evenly throughout the burner tray as shown.

**NOTE:** Ensure the installed optional media doesn’t completely block the airflow—ensure more than 50% of the airflow is open (shown with 3/4" crushed black glass).

11. Place Log 4—identify the pin locator and match with the left side pin on Log 1.

12. Place Log 5—identify the pin locator and match with the right side pin on Log 1.

Rest the other end of Log 5 on the indent in Log 3 as shown below.

Add lava rock sparsely around the perimeter of the burner.
Optional Birchwood Log Set Installation

Read the instructions below carefully and refer to the images. If the logs are broken do not use the unit until they are replaced. Broken logs can interfere with pilot operation.

Improper positioning of the logs may create carbon build-up and can alter the unit’s performance which is not covered under warranty.

*Dark brown paint is included if touch ups are required.

| 1 | Rear Log                  |
| 2 | Left Log                  |
| 3 | Right Log                 |
| 4 | Left Cross Log            |
| 5 | Right Cross Log           |
| 6 | Front Left Log Piece      |
| 7 | Front Right Log Piece     |
|   | Log Brackets (3)          |
|   | Lava rock (purchased separately from log set) |
|   | 1.5 lb Black Fireglass (purchased separately from log set) |
|   | Glowing wool (supplied with unit) |
|   | 3/4" Crushed black glass or iceburg chips (purchased separately from log set) |

1. Shut off gas and electrical supply, allow unit to cool to room temperature.

2. Remove safety glass and firebox glass (see manual).

3. Carefully remove the logs from the packaging and unwrap them. The logs are fragile, handle with care—never force into position.

4. Install Black Fireglass (1.5lb) and glowing wool on the burner as shown below.

5. Clip on the log guides - position the rear guides by centering over the second and fourth vertical lines at the back of the burner. The front log guide clips on to the front edge of the burner on the right side as shown below.

6. Place Log 1 on the top of the installed rear log guides. Follow the measurements as shown below.
7. Position Log 2 as shown and follow the measurements.

8. Place Log 3 to the right front corner of the burner. Follow the measurements as shown. Make the edge of the log sit on top of the log guide.

9. Place Log 6 and Log 7 on the burner locations shown below.

10. Before placing the next log—spread the optional media evenly throughout the burner tray as shown.

**NOTE:** Ensure the installed optional media doesn’t completely block the airflow—ensure more than 50% of the airflow is open (shown with 3/4” crushed black glass).

11. Place Log 4—identify the pin locator and match with the left side pin on Log 1. Rest the Log 4 on the indent in Log 2 as shown below.

12. Place Log 5—identify the pin locator and match with the right side pin on Log 1. Rest the Log 5 on the indent in Log 3 as shown below.
Optional Splitwood Log Set Installation

Read the instructions below carefully and refer to the images. If the logs are broken do not use the unit until they are replaced. Broken logs can interfere with pilot operation.

Improper positioning of the logs may create carbon build-up and can alter the unit's performance which is not covered under warranty.

*Dark brown paint is included if touch ups are required.

Log Brackets (2)
Lava rock (purchased separately from log set)
1.5 lb Black Fireglass (purchased separately from log set)
Glowing wool (supplied with unit)
3/4” Crushed black glass or iceberg chips (purchased separately from log set)

1. Shut off gas and electrical supply, allow unit to cool to room temperature.

2. Remove safety glass and firebox glass (see manual).

3. Carefully remove the logs from the packaging and unwrap them.
   The logs are fragile, handle with care—never force into position.

4. Install Black Fireglass (1.5lb) and glowing wool on the burner as shown below.

5. Clip on the log brackets - position the rear guides by centering over the second and fourth vertical lines at the back of the burner.

6. Place Log 1 on the top of the installed rear log guides. Center it on the burner, as shown below.

Burner covered with Fireglass and glowing wool
7. Position Log 2 as shown and follow the measurements.

8. Place Log 3 to the right front corner of the burner. Follow the measurement as shown.

9. Place Log 6, Log 7 and Log 8 on the burner locations shown below.

10. Before placing the next log—spread the optional media evenly throughout the burner tray as shown.

NOTE: Ensure the installed optional media doesn’t completely block the air flow—ensure more than 50% of the airflow is open (shown with 3/4" crushed black glass).

11. Place Log 4—identify the pin locator and match with the left side pin on Log 1. Rest the Log 4 on the indent in Log 2 as shown below.

12. Place Log 5—identify the pin locator and match with the right side pin on Log 1. Rest the Log 5 on the indent in Log 3 as shown below.
TV Kit Installation

The TV kits may be used in conjunction with the compact/extended framing kits, or it may be used if choosing to use other framing methods using conventional framing. Install the compact or extended framing kits before installing the TV kit. (Extended kit shown in instructions)

**Note:** The TV Kit requires 120 volt power for operation of the television. The receptacle box and all electrical wires should be installed by a qualified electrician.

**Follow steps 1-9 if using the optional compact/extended framing kit.**

1. Install the TV box on to the framing between Parts S + H—attaching to vertical Part I’s with 2 screws each side as shown below.

2. Install the electrical box into the TV box with 2 screws—see below.

3. Remove the knock out from the rear of the electrical box. Bring the BX cable thru the rear of the electrical box. Snap in the wire clamp from the BX cable to the rear of the knock out to secure BX cable. Attach the black wire (Hot), white wire (Neutral) and ground wire to the appropriate terminals on the receptacle.

4. Attach receptacle to electrical box with 2 screws and receptacle cover with 1 screw.

5. Run the BX cable from the back of the electrical box and route through the framing using the supplied ties (use larger holes in framing to accommodate cable ties).

6. Run the BX cable down the back of the unit and to the electrical box located on the front lower left hand side of the appliance and tie in 120 volt power.

7. Feed the required cords (for TV, PVR, etc.) into the cord management tube, with cords installed, feed the end of the tube + cords through the top of the electrical box.

8. Secure the cord management tube to the inside of the framing with the supplied ties.

**NOTE:** Use the holes in the framing kit as indicated as they are large enough to accommodate the ties.
9. After applying the finishing material to the framing kit—secure TV kit trim piece with 2 screws as shown below.

10. When using wall finishes other than Regency's wall panels, in conjunction with the compact/extended framing kit, adhere to the measurements shown below, for the TV wiring kit.

Follow these instructions if choosing to use your own framing materials.

11. Frame the opening 10" W x 7-5/8" H.

Note: The finishing trim kit for this TV box is 1-1/2" deep and designed to be flush to the front of the finished material. The framed opening should be 1-1/2 inches deeper compared to all other framing around the appliance and minus the finished material thickness. (i.e.: If finished material is 1/2" thick, the framed opening should be 1 inch deep.)

12. Secure TV box to framing with 2 screws per side. See below.

13. Repeat steps 3-8 for all electrical/PVR etc. connections.

14. After applying the finishing material to the framing kit - secure TV kit trim piece with 2 screws as shown above. See step 9.

*See manual for minimum TV mounting height.
First Fire

The FIRST FIRE in your fireplace is part of the paint curing process. To ensure the paint is properly cured, it is recommended you burn your fireplace for at least four (4) hours the first time.

When first operated, the unit will release an odour caused by the curing of the paint and the burning off of any oils remaining from manufacturing. Smoke detectors in the house may go off at this time. Open a few windows to ventilate the room for a couple of hours. The glass may require cleaning.

NOTE: When the glass is cold and the appliance is lit, it may cause condensation and fog the glass. This condensation is normal and will disappear in a few minutes as the glass heats up.

DO NOT ATTEMPT TO CLEAN THE GLASS WHILE IT IS STILL HOT!

DO NOT BURN THE UNIT WITHOUT THE GLASS IN PLACE.

Normal Operating Sounds Of Gas Appliances

It is possible that you will hear some sounds from your gas appliance. This is perfectly normal due to the fact that there are various gauges and types of steel used within your appliance. Listed below are some examples. All are normal operating sounds and should not be considered as defects in your appliance.

Burner Tray:
The burner tray is positioned directly under the burner tube(s) media and logs and is made of a different gauge material from the rest of the firebox and body. Therefore, the varying thicknesses of steel will expand and contract at slightly different rates which can cause “ticking” and “cracking” sounds. You should also be aware that as there are temperature changes within the unit these sounds will likely re-occur. Again, this is normal for steel fireboxes.

Pilot Flame:
While the pilot flame is on it can make a very slight “whisper” sound.

Gas Control Valve:
As the gas control valve turns ON and OFF, a dull clicking sound may be audible, this is normal operation of a gas regulator or valve.

Unit Body/Firebox:
Different types and thicknesses of steel will expand and contract at different rates resulting in some “cracking” and “ticking” sounds will be heard throughout the cycling process.

Aeration Adjustment

The burner aeration is factory set but may need adjusting due to either the local gas supply or altitude. Open the air shutter for a blue flame or close for a more yellow flame.

Remove outer safety glass and inner glass panels plus outer and inner base panels - see instructions in this manual.

1. Remove burner tray by lifting up and out.

2. Loosen 4 screws in locations shown below (2 at front and 2 at rear)—slide burner to the left away from the orifice and lift out.

3. Reverse steps to reinstall burner.

Minimum Air Shutter Opening:

<table>

</table>

Note: Any damage due to carboning resulting from improperly setting the aeration controls is NOT covered under warranty.
Maintenance Instructions

1. Always turn off the gas valve before cleaning. For relighting, refer to lighting instructions. Keep the burner and control compartment clean by brushing and vacuuming at least once a year. When cleaning the logs, use a soft clean paint brush as the logs are fragile and easily damaged.

2. Clean appliance and door with a damp cloth (never when unit is hot). Never use an abrasive cleaner. The glass should be cleaned with a gas fireplace glass cleaner. **The glass should be cleaned when it starts looking cloudy.**

3. The fireplace is finished in a heat resistant paint and should only be refinished with heat resistant paint. Regency® uses StoveBright Paint - Metallic Black #6309.

4. Make a periodic check of burner for proper position and condition. Visually check the flame of the burner periodically, making sure the flames are steady; not lifting or floating. If there is a problem, call a qualified service person.

5. The appliance and venting system must be inspected before use, and at least annually, by a qualified field service person, to ensure that the flow of combustion and ventilation air is not obstructed.

**Note:** Never operate the appliance without the glass properly secured in place.

6. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

7. In the event this appliance has been serviced check that the vent-air system has been properly resealed & reinstalled in accordance with the manufacturer’s instructions.

8. Verify operation after servicing.

General Vent Maintenance

Conduct an inspection of the venting system semi-annually. Recommended areas to inspect as follows:

1. Check the Venting System for corrosion in areas that are exposed to the elements. These will appear as rust spots or streaks, and in extreme cases, holes. These components should be replaced immediately.

2. Remove the Cap, and shine a flashlight down the Vent. Remove any bird nests, or other foreign material.

3. Check for evidences of excessive condensation, such as water droplets forming in the inner liner, and subsequently dripping out the joints. Continuous condensation can cause corrosion of caps, pipe, and fittings. It may be caused by having excessive lateral runs, too many elbows, and exterior portions of the system being exposed to cold weather.

4. Inspect joints, to verify that no pipe sections or fittings have been disturbed, and consequently loosened. Also check mechanical supports such as Wall Straps, or plumbers’ tape for rigidity.

Log Replacement

The unit should never be used with broken logs. Turn off the gas valve and allow the unit to cool before opening door and carefully remove the logs. (The pilot light generates enough heat to burn someone!) If for any reason a log should need replacement, you must use the proper replacement log. The position of these logs must be as shown in the diagrams under Log Installation.

**Note:** Improper positioning of logs may create carbon build-up and will severely alter the unit’s performance which is not covered under warranty.

Glass Gasket

If the glass gasket requires replacement use a tadpole glass gasket (Part # 936-220).

Glass

Your Regency® fireplace is supplied with high temperature 5mm-Tempered outer glass & 5mm-Ceramic inner glass. If your glass requires cleaning, we recommend using an approved glass cleaner available at all authorized dealers. Do not use abrasive materials.

**CAUTION & WARNINGS:**

* Do not clean when the glass is hot.
* The use of substitute glass will void all product warranties.
* Care must be taken to avoid breakage of the glass.
* Do not strike or abuse the glass.
* Do not operate this fireplace without the glass front or with a cracked or broken glass front.
* Wear gloves when removing damaged or broken glass.
* Replacement of the glass panels should be done by a licensed or qualified service person.

Glass Replacement

In the event that you break your glass by impact, purchase your replacement from an authorized Regency dealer only. Replacement glass is shipped already installed into the door frame. Reinstall as per Glass Installation in the “Glass Installation” section.

**REPLACEMENT GLASS:**

CV40EPV
Outer Safety Glass - Tempered (Part #940-435/P)
Inner Glass - Ceramic (Part # 940-434/P)
Bulb Replacement

1. Turn off unit and allow to cool to room temperature.

2. Remove outer safety glass panels and inner panels (firebox glass)—see instructions in this manual.

3. Loosen 2 outer screws on each side to remove outer light cover — located in the upper inside front of the firebox and remove.

4. Loosen 2 screws on each side of individual inner light cover and remove.

5. Remove glass cover by using a flat head screwdriver to pry the tab securing the glass assembly in place.

6. Replace bulb and reverse steps to complete procedure.

NOTE: Do not handle bulb with bare hands. Use packaging or a tissue to hold new bulb when replacing.

Regency Part# 911-208 Oven Lamp Assembly G9 120V/25W
Regency Part# 911-072 Replacement Bulb G9 120 Volt/25 watt
Valve Replacement

**Important:** Always shut off gas supply/120 volt power prior to servicing the gas valve.

1. Turn off unit and allow to cool to room temperature.

2. Remove outer enamel or steel panels—see instructions in the panel removal section in this manual.

3. Remove outer safety glass panels and inner panels (firebox glass)—see instructions in this manual.

4. Remove all media and logs (if installed) — set aside.

5. Remove inner base panel.

6. Loosen 4 screws in locations shown below (2 at front and 2 at rear)—slide burner to the left away from the orifice and lift out.

7. Remove 16 screws in locations shown below.

8. Lift valve tray out partially and disconnect flexible gas connection on the valve inlet side, remove valve tray—replace with new valve tray.

9. Reverse steps 6-1 to complete.
End of Line Power Vent Maintenance

External Power Vent Access

1. Remove 4 screws located around inner trim (Diagram 1).

2. Loosen 4 screws (Diagram 2) and slide shield up and out. Once access has been made into power vent housing, you can remove the pressure switch and fan motor.

3. Remove the pressure switch by disconnecting red and blue wires from pressure switch (Diagram 3) Disconnect Hose from underside of pressure switch (Diagram 4)

4. Loosen (1) one Phillips head screw securing the pressure switch to the power vent housing (Diagram 5) once the pressure switch is free from the Housing unit, it is possible to replace the pressure switch by removing (1) one Phillips head screw holding the pressure switch to mounting bracket (Diagram 6).

Replacing the power vent motor:

1. Turn off power supply.

2. Loosen 6 x 1/4” hex screws slightly.

3. Turn power vent motor counter clockwise and lift out (Diagram 7).

4. Disconnect power to the motor by disconnecting black and black wire and white and black wire (Diagram 8). The power vent motor is now free from the unit.

5. Loosen 4 screws and slide shield up and out (Diagram 2). Once access to the power vent housing is achieved, you can remove the pressure switch and fan motor.

6. Remove the pressure switch by disconnecting the red and blue wires from the pressure switch (Diagram 3)

7. Disconnect the hose from the underside of the pressure switch (Diagram 4). Loosen one Phillips head screw holding the pressure switch to the power vent housing (Diagram 5). Once the pressure switch is free from the housing it is possible to replace the pressure switch by removing one Phillips head screw holding the pressure switch to mounting bracket. (Diagram 6)

8. To replace the power vent motor, first turn off the power supply, then slightly loosen 6 x 1/4” hex screws. Turn the power vent motor counter clockwise and pull it out (Diagram 7).

9. Disconnect the power to the motor by disconnecting the black and black wire and the white and black wire (Diagram 8). The power vent motor is now free.
End of Line Power Vent Maintenance
Internal Power Vent Access

Note: May only be accessed if an access panel was installed for servicing from inside.

1. Turn off the power.

2. Remove 8 Phillips head screws from the rear of the power vent (see Diagram 1).

3. Slide the power vent housing out through the back as shown in Diagram 2.

4. Turn the power vent over to the front side (Diagram 3).

5. Follow Steps 1-9 on previous page.
Power Vent Maintenance - External Power Vent Access

Inline Power Vent

1. Remove 4 screws from the cover plate.

2. Remove the pressure switch by disconnecting its red and blue wires (Diagram 2). The longest silicone tube is connected to the pressure switch side labelled "P" and the shorter silicone tube is connected to the side labelled "V".

3. Loosen the 2 screws securing the pressure switch bracket to the power vent bracket mount (Diagram 3). Once the pressure switch is free, it is possible to replace it by removing (1) one Phillips head screw holding the pressure switch to the mounting bracket (Diagram 4).

Replacing the power vent motor:

1. Turn off power supply.

2. Loosen 6 x 1/4" hex screws slightly.

3. Turn power vent motor counter-clockwise and lift out. (Diagram 5)

4. Disconnect power to motor by disconnecting black and black wire and white and black wire (Diagram 6) power vent motor is now free from the unit.
# Gas Maintenance - Recommended Annual Routine

In order for your Regency appliance to continue to provide comfort to your home periodic maintenance must be performed to ensure it is operating at peak efficiency. The items in the list should be checked by a licensed gas service technician during the annual service check. Your unit may require more frequent maintenance checks if you notice any changes in how it operates. Operational changes to look for can include, but are not limited to, extended start up time, increased fan noise, residue/carbon build up, white build up on the glass/firebox, increased operating noise etc. Should any of these or other conditions arise, discontinue use and schedule a service check with your local licensed gas technician. The list below shows items your licensed service technician will need to check and service at least annually.

## Clean
- Glass
- Interior bricks / panels
- Burner ports & burner air shutter
- Fan blades
- Log set
- Pilot orifices
- Pilot hood (change as needed)
- Flame sensor (electronic ignition models)
- Flame electrode
- Burner orifice
- Thermocouple (millivolt models)
- Thermopile (millivolt models)

## Inspect
- Pilot assembly
- Burner
- Pressure relief gaskets/doors
- Flue connector gasket if present
- Door seal
- Firebox
- Venting
- Batteries (remote handheld, remote receiver, DC spark er, change as needed)
- Burner media (change as needed)
- Air shutter setting
- Wiring

## Check
- Voltage on thermocouple/thermopile (millivolt models)
- Ohms reading on flame sense (electronic ignition models)
- Inlet/outlet fuel pressures as per rating plate
- Voltage/ohms readings on gas valve
- Ohms reading to on/off switch circuit (Millivolt models)

## Gas Leak Tests
- Check main gas line connection to valve
- Check shut off valve connections
- Check connection at gas valve outlet
- Check connection at main burner orifice
- Check pilot fuel line at valve and at pilot assembly

Limited Lifetime Warranty
FPI Fireplace Products International Ltd. (for Canadian customers) and Fireplace Products U.S., Inc. (for U.S. customers) (collectively referred to herein as “FPI”) extends this Limited Lifetime Warranty to the original purchaser of this appliance provided the product remains in the original place of installation. The items covered by this limited warranty and the period of such coverage is set forth in the table below.

Some conditions apply (see below).

The policy is not transferable, amendable or negotiable under any circumstances.

Conditions:
Warranty protects against defect in manufacture or FPI factory assembled components only, unless herein specified otherwise.

Any part(s) found to be defective during the warranty period as outlined above will be repaired or replaced at FPI’s option through an accredited distributor, dealer or pre-approved and assigned agent provided that the defective part is returned to the distributor, dealer or agent for inspection if requested by FPI. Alternatively, FPI may at its own discretion fully discharge all of its obligations under the warranty by refunding the verified purchase price of the product to the original purchaser. The purchase price must be confirmed by the original Bill of Sale.

The authorized selling dealer, or an alternative authorized FPI dealer if pre-approved by FPI, is responsible for all in-field diagnosis and service work related to all warranty claims. FPI is not responsible for results or costs of workmanship of unauthorized FPI dealers or agents in the negligence of their service work.
At all times FPI reserves the right to inspect reported complaints on location in the field claimed to be defective prior to processing or authorizing of any claim. Failure to allow this upon request will void the warranty.

All warranty claims must be submitted by the dealer servicing the claim, including a copy of the Bill of Sale (proof of purchase by you). All claims must be complete and provide full details as requested by FPI to receive consideration for evaluation. Incomplete claims may be rejected.

Unit must be installed according to all manufacturers’ instructions as per the manual.

All Local and National required codes must be met.

The installer is responsible to ensure the unit is operating as designed at the time of installation.

The original purchaser is responsible for annual maintenance of the unit, as outlined in the owner’s manual. As outlined below, the warranty may be voided due to problems caused by lack of maintenance.

Repair/replacement parts purchased by the consumer from FPI after the original coverage has expired on the unit will carry a 90 day warranty, valid with a receipt only. Any item shown to be defective will be repaired or replaced at our discretion. No labor coverage is included with these parts.

**Exclusions:**

This Limited Lifetime Warranty does not extend to paint, rust or corrosion of any kind due to a lack of maintenance or improper venting, combustion air provision, corrosive chemicals (i.e. chlorine, salt, air, etc.), door or glass gasketing.

Malfunction, damage or performance based issues as a result of environmental conditions, location, chemical damages, downdrafts, installation error, installation by an unqualified installer, incorrect chimney components (including but not limited to cap size or type), operator error, abuse, misuse, use of improper fuels, lack of regular maintenance and upkeep, acts of God, weather related problems from hurricanes, tornados, earthquakes, floods, lightning strikes/bolts or acts of terrorism or war, which result in malfunction of the appliance are not covered under the terms of this Limited Lifetime Warranty.

FPI has no obligation to enhance or modify any unit once manufactured (i.e. as products evolve, field modifications or upgrades will not be performed on existing appliances).

This warranty does not cover dealer travel costs for diagnostic or service work. All labor rates paid to authorized dealers are subsidized, pre-determined rates. Dealers may charge homeowner for travel and additional time beyond their subsidy.

Any unit showing signs of neglect or misuse will not be covered under the terms of this warranty policy and may void this warranty. This includes units with rusted or corroded fireboxes which have not been reported as rusted or corroded within three (3) months of installation/purchase.

Units which show evidence of being operated while damaged, or with problems known to the purchaser and causing further damages will void this warranty.

Units where the serial no. has been altered, deleted, removed or made illegible will void this warranty.

Minor movement, expansion and contraction of the steel is normal and is not covered under the terms of this warranty.

FPI is not liable for the removal or replacement of facings or finishing in order to repair or replace any appliance in the field.

Freight damages for products or parts are not covered under the terms of the warranty.

Products made or provided by other manufacturers and used in conjunction with the FPI appliance without prior authorization from FPI may void this warranty.
**Limitations of Liability:**
The original purchaser’s exclusive remedy under this warranty, and FPI’s sole obligation under this warranty, express or implied, in contract or in tort, shall be limited to replacement, repair, or refund, as outlined above. IN NO EVENT WILL FPI BE LIABLE UNDER THIS WARRANTY FOR ANY INCIDENTAL OR CONSEQUENTIAL COMMERCIAL DAMAGES OR DAMAGES TO PROPERTY. TO THE EXTENT PERMITTED BY APPLICABLE LAW, FPI MAKES NO EXPRESS WARRANTIES OTHER THAN THE WARRANTY SPECIFIED HEREIN. THE DURATION OF ANY IMPLIED WARRANTY IS LIMITED TO DURATION OF THE EXPRESSED WARRANTY SPECIFIED ABOVE. IF IMPLIED WARRANTIES CANNOT BE DISCLAIMED, THEN SUCH WARRANTIES ARE LIMITED IN DURATION TO THE DURATION OF THIS WARRANTY.

Some U.S. states do not allow limitations on how long an implied warranty lasts, or allow exclusion or limitation of incidental or consequential damages, so the above limitations or exclusions may not apply to you.

Customers located outside the U.S. should consult their local, provincial or national legal codes for additional terms which may be applicable to this warranty.

**How to Obtain Warranty Service:**
Customers should contact the authorized selling dealer to obtain warranty service. In the event the authorized selling dealer is unable to provide warranty service, please contact FPI by mail at the address listed below. Please include a brief description of the problem and your address, email and telephone contact information. A representative will contact you to make arrangements for an inspection and/or warranty service.
