WARNING:
If the information in these instructions are not followed exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

FOR YOUR SAFETY
Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

Installation and service must be performed by a qualified installer, service agency or the gas supplier.

FOR YOUR SAFETY
What to do if you smell gas:
• Do not try to light any appliance
• Do not touch any electrical switch: do not use any phone in your building.
• Immediately call your gas supplier from a neighbour's phone. Follow the gas supplier's instructions.
• If you cannot reach your gas supplier, call the fire department.

Installer: Please complete the details on the back cover and leave this manual with the homeowner.
Homeowner: Please keep these instructions for future reference.
To the New Owner:

Congratulations!
You are the owner of a state-of-the-art Gas Fireplace by REGENCY®. The HZ54EPV has been designed to provide you with all the warmth and charm of a wood fireplace at the flick of a switch. The model HZ54EPV has been approved by Warnock Hersey/Intertek for both safety and efficiency. As it also bears our own mark, it promises to provide you with economy, comfort and security for many trouble free years to follow. Please take a moment now to acquaint yourself with these instructions and the many features of your Regency® Fireplace.

WARNING

HOT GLASS WILL CAUSE BURNS

DO NOT TOUCH GLASS UNTIL COOLED

NEVER ALLOW CHILDREN TO TOUCH GLASS

We recommend that our products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) or in Canada by Wood Energy Technical Training (WETT).

ONE REGENCY
ONE TREE™

Die Kaminanlage wird mit einem dedizierten #8 Ground Lug zur Verkennung des Erdungskabels an der Stahlrahmen als lokal anwendbar.

Die Kaminanlage kann nur mit dem Gasartigen verwendet werden, das auf der Kennzeichnungsschild angegeben wird. Die Kaminanlage ist nicht konvertierbar für andere Gasarten.

Stellen Sie sicher, dass die strukturellen Members nicht geschnitten oder angegriffen werden, während die Installation.

WARRANTY
The Warranty: Limited Lifetime ...............................59
This appliance must be installed according to local codes, if any. If none, follow the National Fuel Gas Code, ANSI Z223.1, or Natural Gas and Propane Installation Code, CSA B149.1.

This appliance may be installed in an aftermarket, permanently located, manufactured (mobile) home where not prohibited by local codes. See owner's manual for details. Listed for use with Power Vent Kit #946-705.

Install the appliance according to the manufacturer's instructions. Installation must be performed by a licensed contractor or installer according to the manufacturer's instructions. The installation must comply with local codes and regulations.

This vented gas fireplace heater is not for use with air filters.

Made in Canada/ Fabriqué au Canada 919-940
5.08: Modifications to NFPA-54, Chapter 10

(2) Revise 10.8.3 by adding the following additional requirements:

(a) For all side wall horizontally vented gas fueled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes, including those owned or operated by the Commonwealth and where the side wall exhaust vent termination is less than seven (7) feet above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied:

1. INSTALLATION OF CARBON MONOXIDE DETECTORS. At the time of installation of the side wall horizontal vented gas fueled equipment, the installing plumber or gasfitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed. In addition, the installing plumber or gasfitter shall observe that a battery operated or hard wired carbon monoxide detector with an alarm is installed on each additional level of the dwelling, building or structure served by the side wall horizontal vented gas fueled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard wired carbon monoxide detectors.

a. In the event that the side wall horizontally vented gas fueled equipment is installed in a crawl space or an attic, the hard wired carbon monoxide detector with alarm and battery back-up may be installed on the next adjacent floor level.

b. In the event that the requirements of this subdivision can not be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.

2. APPROVED CARBON MONOXIDE DETECTORS. Each carbon monoxide detector as required in accordance with the above provisions shall comply with NFPA 720 and be ANSI/UL 2034 listed and IAS certified.

3. SIGNAGE. A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print size no less than one-half (1/2) inch in size, "GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL OBSTRUCTIONS".

4. INSPECTION. The state or local gas inspector of the side wall horizontally vented gas fueled equipment shall not approve the installation unless, upon inspection, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CMR 5.08(2)(a)1 through 4.

(b) EXEMPTIONS: The following equipment is exempt from 248 CMR 5.08(2)(a)1 through 4:

1. The equipment listed in Chapter 10 entitled "Equipment Not Required To Be Vented" in the most current edition of NFPA 54 as adopted by the Board; and

2. Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

(c) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM PROVIDED. When the manufacturer of Product Approved side wall horizontally vented gas fueled equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for installation of the equipment and the venting system shall include:

1. Detailed instructions for the installation of the venting system design or the venting system components; and

2. A complete parts list for the venting system design or venting system.

(d) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM NOT PROVIDED. When the manufacturer of a Product Approved side wall horizontally vented gas fueled equipment does not provide the parts for venting the flue gases, but identifies "special venting systems", the following requirements shall be satisfied by the manufacturer:

1. The referenced "special venting system" instructions shall be included with the appliance or equipment installation instructions; and

2. The "special venting systems" shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

(e) A copy of all installation instructions for all Product Approved side wall horizontally vented gas fueled equipment, all venting instructions, all parts lists for venting instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation.
INSTALLATION

IMPORTANT MESSAGE
SAVE THESE INSTRUCTIONS

The HZ54EPV Direct Vent Fireplace must be installed in accordance with these instructions. Carefully read all the instructions in this manual first. Consult the “authority having jurisdiction” to determine the need for a permit prior to starting the installation. It is the responsibility of the installer to ensure this fireplace is installed in compliance with manufacturers instructions and all applicable codes.

BEFORE YOU START

Safe installation and operation of this appliance requires common sense, however, we are required by the Canadian Safety Standards and ANSI Standards to make you aware of the following:

INSTALLATION AND REPAIR SHOULD BE DONE BY AN AUTHORIZED SERVICE PERSON. THE APPLIANCE SHOULD BE INSPECTED BEFORE USE AND AT LEAST ANNUALLY BY A PROFESSIONAL SERVICE PERSON. MORE FREQUENT CLEANING MAY BE REQUIRED DUE TO EXCESSIVE LINT FROM CARPETING, BEDDING MATERIAL, ETC. IT IS IMPERATIVE THAT CONTROLS, COMPARTMENTS, BURNERS AND CIRCULATING AIR PASSAGEWAYS OF THE APPLIANCE BE KEPT CLEAN.

DUE TO HIGH TEMPERATURES, THE APPLIANCE SHOULD BE LOCATED OUT OF TRAFFIC AND AWAY FROM FURNITURE AND DRAPERIES.

WARNING: FAILURE TO INSTALL THIS APPLIANCE CORRECTLY WILL VOID YOUR WARRANTY AND MAY CAUSE A SERIOUS HOUSE FIRE.

CHILDREN AND ADULTS SHOULD BE ALERTED TO THE HAZARDS OF HIGH SURFACE TEMPERATURES, ESPECIALLY THE FIREPLACE GLASS, AND SHOULD STAY AWAY TO AVOID BURNS OR CLOTHING IGNITION.

GENERAL SAFETY INFORMATION

1) The appliance installation must conform with local codes or, in the absence of local codes, with the current Canadian or National Gas Codes, CAN1-B149 or ANSI Z223.1 Installation Codes.
2) The appliance when installed, must be electrically grounded in accordance with local codes, or in the absence of local codes with the current National Electrical Code, ANSI/NFPA 70 or CSA C22.1 Canadian Electrical Code.
3) See general construction and assembly instructions. The appliance and vent should be enclosed.
4) This appliance must be connected to the specified vent and termination cap to the outside of the building envelope. Never vent to another room or inside a building. Make sure that the vent is fitted as per Venting instructions.
5) Inspect the venting system annually for blockage and any signs of deterioration.
6) Venting terminals shall not be recessed into a wall or siding.
7) Any safety glass removed for servicing must be replaced prior to operating the appliance.
8) To prevent injury, do not allow anyone who is unfamiliar with the operation to use the fireplace.
9) Wear gloves and safety glasses for protection while doing required maintenance.

10) Be aware of electrical wiring locations in walls and ceilings when cutting holes for termination.
11) Under no circumstances should this appliance be modified. Parts that have to be removed for servicing should be replaced prior to operating this appliance.
12) Installation and any repairs to this appliance should be done by an authorized service person. A professional service person should be called to inspect this appliance annually. Make it a practice to have all of your gas appliances checked annually.
13) Do not slam shut or strike the glass door.
14) Under no circumstances should any solid fuels (wood, paper, cardboard, coal, etc.) be used in this appliance.
15) The appliance area must be kept clear and free of combustible materials, (gases and other flammable vapours and liquids).

Emissions from burning wood or gas could contain chemicals known to the State of California to cause cancer, birth defects or other reproductive harm.
INSTALLATION

CHECKLIST

1) Locate appliance
   a) Room location (Refer to "Locating Your Gas fireplace" section)
   b) Clearances to Combustibles (Refer to "Clearances" section)
   c) Mantle Clearances (Refer to "Mantle Clearances" section)
   d) Framing & Finishing Requirements (Refer to "Framing & Finishing" section)
   e) Venting Requirements (Refer to "Venting" section)
   f) Clearances to terminal

2) Make electrical connections for Power Vent System and for unit. 120V power is required to operate unit / power vent system.

3) Assemble Top and Side Standoffs (Refer to "Unit Assembly Prior to Installation" section).

4) Slide unit into place.

5) Install vent (Refer to "Venting Arrangement" sections).

6) Make gas connections (Refer to "Gas Line Installation" section).

7) Install 4 AA batteries into battery pack.

8) Test the pilot (Refer to "Pilot Adjustment" section).

9) Test Gas Pressure (Refer to "Gas Pipe Pressure Testing" section).

10) Install standard and optional features. Refer to the following sections:
    a) Optional Log Set Installation
    b) Glass Crystals/ Optional Ceramic Stones
    c) Optional Firebox Base Pebbles
    d) Optional Reflective Panels
    e) Faceplate / Door Frame Overlay
    f) Remote Control
    g) Wall Switch

11) Final check.

   Before leaving this unit with the customer, the installer must ensure that the appliance is firing correctly and operation fully explained to customer.

   This includes:
   1) Clocking the appliance to ensure the correct firing rate (rate noted on label 41,500 Btu/h (NG), after burning appliance for 15 minutes.
   2) If required, adjusting the primary air to ensure that the flame does not carbon. First allow the unit to burn for 15-20 min. to stabilize.

   CAUTION: Any alteration to the product that causes sooting or carboning that results in damage is not the responsibility of the manufacturer.

   LOCATING YOUR GAS FIREPLACE

   1) When selecting a location for your fireplace, ensure that the clearances are met.

   2) The appliance must be installed on a flat, solid, continuous surface For example a wood, metal or concrete floor or in a raised (on the wall) application. The appliance must be installed on a metal or wood panel extending the full width and depth of the appliance.

   3) The HZ54EPV Gas Fireplace can be installed in a recessed position or framed out into the room as in A, B, C and D.

   See Diagram 1.

   Diagram 1

   A) Flat on Wall
   B) Flat on Wall Corner
   C) Recessed into Wall/Alcove
   D) Corner

   Note: For vent terminations refer to "Exterior Vent Termination Locations" section.

4) This appliance is Listed for bedroom installations using the standard Remote (millivolt thermostat system). Some areas may have further requirements, check local codes before installation.

5) The HZ54EPV Direct Vent Gas Fireplace is approved for alcove installations, see "Clearances" section for details.

6) We recommend that you plan your installation on paper using exact measurements for clearances and floor protection before actually installing this appliance. Have an authorized inspector, dealer, or installer review your plans before installation.
CLEARANCES

The clearances listed below are Minimum distances unless otherwise stated:

A major cause of chimney related fires is failure to maintain required clearances (air space) to combustible materials. It is of the greatest importance that this fireplace and vent system be installed only in accordance with these instructions.

**Caution Requirements**
The top, back and sides of the fireplace are defined by standoffs. The metal ends of the standoff may **NOT** be recessed into combustible construction.

**WARNING**
Fire hazard is an extreme risk if these clearances (air space) to combustible materials are not adhered to. It is of greatest importance that this fireplace and vent system be installed only in accordance with these instructions.

### CLEARANCES

The clearances listed below are Minimum distances unless otherwise stated:

A major cause of chimney related fires is failure to maintain required clearances (air space) to combustible materials. It is of the greatest importance that this fireplace and vent system be installed only in accordance with these instructions.

#### Caution Requirements

The top, back and sides of the fireplace are defined by standoffs. The metal ends of the standoff may **NOT** be recessed into combustible construction.

#### WARNING

Fire hazard is an extreme risk if these clearances (air space) to combustible materials are not adhered to. It is of greatest importance that this fireplace and vent system be installed only in accordance with these instructions.

NON-COMBUSTIBLE FACING BOARD

All four pieces (top, 2 sides, bottom) are now supplied to meet the non-combustible requirements. Previously only the top was supplied.

If finishing the wall above the unit with paint - the non-combustible board (shipped separately from the unit) should be installed. Facing board must be ordered when ordering the unit.

Calcium silicate board is a high-grade material with cement, quartz, natural and selected minerals as the main raw materials. It is widely used for partitions and ceilings in buildings. It is fire proof and earthquake proof.

If finishing the wall above the unit with materials such as tile, brick, marble, etc. non-combustible board available from the building supply store can be used.

Note: Calcium Silicate is 1/2' thick

NON-COMBUSTIBLE FACING INSTALLATION

Caution: This non-combustible board can be damaged if dropped or struck. Handle with care.
Inspect board prior to installation. Do not install if cracked.

1) Using drywall screws - secure non-combustible material around unit, framing and top nailing strip every 6 inches.

Important Note: To avoid cracking the board - pre-drill holes prior to securing to unit/ framing.

2) Wipe any debris/dust from the non-combustible material and drywall.

3) Prior to taping and mudding it is highly recommended to prime the facing and edges using a quality primer. This will ensure proper adhesion of both the tape and mud. The optional board is very porous. During dry fit, ensure that both surfaces being taped are even.

4) Tape the seams using a mesh type tape.

5) Mud seams as normal We recommend using a product called Durabond high strength compound - for the first coat This product can be found at any hardware store. Mud must be cured as per manufacturer's recommendations.

6) Prime wall for a second time for proper adhesion of paint

7) Paint walls using a high quality paint which will withstand the high temperatures being emitted from this appliance.

Note: Due to the high temperatures being emitted from this appliance, incorrectly mudded joints may crack. Keep mud thickness to a minimum.
MANTEL CLEARANCES

Due to the extreme heat this fireplace emits, the mantel clearances are critical. Combustible mantel clearances from top of front facing are shown in the diagram on the right.

Note: A non-combustible mantel may be installed at a lower height if the framing is made of metal studs covered with a non-combustible board.

Note: Ensure the paint that is used on the mantel and the facing is "heat resistant" or the paint may discolour.

MANTEL LEG CLEARANCES

Combustible mantel leg clearances as per diagram:

Allowable mantel leg projection

Non-Combustible
FRAMING & FINISHING

1) Frame in the enclosure for the unit with framing material.

   IMPORTANT: Header must be metal stud. All other framing may be of combustible type such as 2x4 / 2x6 framing materials.

   Note: When constructing the framed opening, please ensure there is access to install the gas lines when the unit is installed.

2) For exterior walls, insulate the enclosure to the same degree as the rest of the house, apply vapour barrier and drywall, as per local installation codes. (Do not insulate the fireplace itself.)

   WARNING: Failure to insulate and add vapor barriers to the inside of the exterior wall will result in operational and performance problems including, but not limited to: excessive condensation on glass doors, poor flame package, carbon, blue flames etc. These are not product related issues.

3) The unit does not have to be completely enclosed in a chase. You must maintain clearances from the vent to combustible materials: See “Clearances” section. Combustible materials can be laid against the side and back standoffs and the stove base.

4) The combined total of non-combustible facing materials (ie. hardiboard + tile, slate, etc) may be brought up to and overlap the face of the unit (top and bottom). The minimum thickness = 1/2" to a maximum thickness = 1-1/2", as shown in the diagram below.

   If material is thicker than 1-1/2" - it will not be possible to mount the faceplate.

5) When finishing around the faceplate, if material such as brick, stone, etc. extend past the faceplate depth - the minimum opening dimensions noted below must be adhered to, this is to ensure removal of the faceplate.

   For material such as brick, stone, etc. that extends less than 1-1/2", the minimum opening dimensions noted below must be adhered to when finishing around the unit. This is to ensure safe operation of this appliance and the longevity of the finishing material.

6) Determine the total thickness of facing material (eg. hardiboard + ceramic tile) to ensure the finished surface is flush with the front edge of the unit (see diagram below). If necessary, side and top nailing strips are adjustable, loosen the 1/4" screws and adjust.

   Total non-combustible facing allowable: Min. = 1/2"  
   Max. = 1- 1/2"

   See diagram below.

</tr>
</tbody>
</table>

* Framing depth measurement is noted with the side nailing strips set as far forward on the firebox as possible. The side nailing strips can be adjusted back up to 1" to allow for varying thicknesses in non-combustible material & wall finishes.

**Important:** The minimum framing dimensions given for height, width and depth must be maintained even if using non-combustible materials. Dangerous operating conditions will occur if minimum framing dimensions are not adhered to.
FRAMING WITH A NEGATIVE VENT RUN

Framing width - offset to one side (left or right)

Framing width - equal on both sides (left or right) (pipe configuration same as above).

</tbody>
</table>

Note: Rigid pipe adaptor and 2 x 90° elbows required to achieve minimum clearances.

Note: Framing height and width remain the same as previous page.
UNIT ASSEMBLY
PRIOR TO INSTALLATION

The Top Standoff/Nailing Strip, side nailing strips and standoffs must be correctly positioned and attached to the unit before sliding the unit into position.

STANDOFF ASSEMBLY

The top, side, rear and bottom standoffs are shipped in a flat position and must be folded into shape and attached - see diagram 1.

1) Remove the standoffs from the unit.

2) Take each standoff and bend into the correct shape. Bend up at the bend lines until the screw holes in the standoff and the pre-punched screw holes on the unit line up.

3) Install the top standoff / nailing strip is shipped attached to the back of the unit as shown below.

1) Remove one screw in location shown below. Replace the screw on the back the unit after removing the standoff / nailing strip.

2) Bend the 3 tabs at the bottom of the standoff / nailing strip to 90°, bend in the same direction as the top tabs.

3) Install on the top front of the unit as shown in diagram 3. Do not fully tighten the screws when installing - until the facing thickness has been determined.

NAILING STRIPS

The nailing strips come attached to the unit. There is 1 plate on each side, 1 on the top, and one on the bottom that can be folded out as required. The top and side nailing strips are secured to the framing. The bottom nailing strip is secured to the unfinished floor - if installing the unit directly on the floor.

Note: The bottom nailing strip will need to be bent on site and adjusted to accommodate the thickness of the facing material.

IMPORTANT NOTE

Framing depth measurement is noted with the side nailing strips set as far forward on the firebox as possible. The nailing strips can be adjusted back up to 1” to allow for varying thicknesses in non-combustible material & wall finishes.

VENTING INTRODUCTION

The HZ54EPV uses the “balanced flue” technology Co Axial system. The inner liner vents products of combustion to the outside while the outer liner draws outside combustion air into the combustion chamber thereby eliminating the need to use heated room air for combustion and losing warm room air up the chimney.

Note: These flue pipes must not be connected to any other appliance.

The gas appliance and vent system must be vented directly to the outside of the building, and never be attached to a chimney serving a separate solid fuel or gas burning appliance. Each direct vent gas appliance must use it’s own separate vent system. Common vent systems are prohibited.
VENT RESTRICTOR POSITION

Vent restriction is required for certain venting installations, see the diagrams in the "Venting Arrangements" section to determine if they are required for your installation.

The Vent Restrictor plate is located on the inside top of the firebox.

To set the vent restriction as indicated in the venting arrangements diagrams, refer to the following instructions:

1) Remove the glass door.

2) Remove the screws that hold the vent restrictor plate in place.

3) Adjust the vent restrictor plate to the required vent restrictor position as per the diagrams shown.

4) Once the vent restrictor plate is in the required position, secure with screws.

Vent Restrictor Settings for HZ54EPV NG & LP

THIS HOLE SETS THE VENT RESTRICTOR AT 3"
Factory Setting

Vent Restrictor Set 2

THIS HOLE SETS THE VENT RESTRICTOR AT 2"

Vent Restrictor Set 3
The Power Vent System is a Direct Vent Terminal designed to allow installation of gas appliances where typical vent configurations cannot be achieved.

These installation instructions must be used in conjunction with the appliance and appropriate Power Vent components installation instructions. 120 Volt power supply is required to operate this system (see Electrical Installation section in this manual).

Clearances listed in these Instructions supersede those in the appliance's Installation Instructions.

Models Equipped with Surefire Ignition
The power vent system can only be used with units that have been tested with the Regency Power Vent system. Downward vertical vent runs are permitted with the Surefire Ignition system. See vent configuration in this manual.

POWER VENT SYSTEMS ARE FOR USE WITH RIGID PIPE ONLY. See venting in this manual for detailed instructions.
### 5” x 8” Rigid Pipe Cross Reference Chart

Components from different Manufacturers may not be mixed. Not All Rigid Pipe components are available directly from FPI.

For specific instructions on venting components - visit the manufacturers website listed below.

- Simpson Direct Vent Pro: www.duravent.com
- Metal-Fab Sure Seal: www.mtlfab.com
- Industrial Chimney Company: www.icc-rsf.com

**Note:** Horizontal runs of vent must be level, or have a 1/4" rise for every 1 foot of run towards the termination. Never allow the vent to run downward - this could cause high temperatures and may present a possible fire hazard.
The gas power vent systems is designed to allow the installation of a gas appliance when typical vent configurations (shown in this manual) are not possible.

**Note:** Must be terminated horizontally. Vertical terminations are not permitted.

Maximum total vent length = 60' maximum of six - 90° elbows permitted.
One 90° elbow = two 45° elbows.
Maximum total negative vent length = 10'.
### EXTERIOR VENT TERMINATION REQUIREMENTS

</tr>
</tbody>
</table>

---

1 In accordance with current CSA B149.1, Natural Gas and Propane Installation Code
2 In accordance with the current ANSI Z223.1/NFPA 54, National Fuel Gas Code

† A vent shall not terminate directly above a sidewalk or paved driveway which is located between two single family dwellings and serves both dwellings
‡ Permitted only if veranda, porch, deck, or balcony is fully open on a minimum of two sides beneath the floor
* Clearance in accordance with local installation codes and the requirements of the gas supplier
‡ 3 feet (91cm) within a height of 15 feet (4.5m) above the meter / regulator assembly
‡ 3 feet (91cm) above - if within 10 feet (3m) horizontally
POWER VENT TERMINAL INSTALLATION

WARNING: ELECTRICAL CONNECTIONS SHOULD ONLY BE CARRIED OUT BY A QUALIFIED AND LICENSED ELECTRICIAN

Note: Optional 5 wire BX cable comes in 20' or 60' lengths as required. Wires are color coded for ease of installation.

1) Frame in opening for the Power Vent Terminal by first determining the correct height - frame in an 11-3/4" x 11-3/4" opening.

2) Feed the BX cable through the firestop - ensure protective grommet is in place before feeding the cable through.

3) Install the Power Vent outer frame with 4 screws - screw locations shown below.

Important: Orient the frame so the BX cable will pass through in the lower left corner.

4) Remove the plate from the bottom right corner of the frame by removing 2 screws from the inside of the frame.

5) Install a strain relief grommet through the plate as shown below.

6) Unravel the BX cable - to expose approx. 7" of wire. Install a wire protector where the metal of the BX cable and the wire meet.

7) Feed a length of BX cable through - (approx. 18") the plate and tighten the strain relief grommet to the plate.
8) Reattach the plate to the inside of the Power Vent outer frame with 2 screws from step 3.

9) Feed the BX cable through the opening in the power vent terminal - located in the lower left corner as shown below.

10) Secure the terminal to the outer frame with 4 screws - screw locations shown below.

11) From the wire bundle (from BX cable) secure the copper ground to the ground lug on the right side.

Important: Ground must be wrapped under star washer - prior to tightening.

12) Tighten bolt to secure ground wire.

13) Connect all like colored wires - red to red, blue to blue, black to black and white to white. Place marettes on all paired wire ends (supplied with kit)

14) Place cable tie guides in holes located on the base of the terminal. Feed cable tie through the guide.

15) Tie down all wires with cable ties - away from the edge of the terminal base and fan blade.
16) Install cap over terminal with 4 screws.

Note: Cap may be painted to match building color.

17) Secure firestop in place with 4 screws (see step 2).

18) Seal the outer frame with supplied sealant to prevent any water from entering the building envelope.

Caution: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation.

PIPE CONNECTION FROM TERMINAL TO UNIT

The rigid pipe and rigid pipe adaptor starting from the installed unit must be installed prior to proceeding.

1) Install 8” or 16” slip section of pipe over final length of rigid pipe.

2) Install reducer to the end of 8” slip section.

3) Connect reducer to Power vent terminal - adjust slip section for fit. Secure slip section with screws when optimal fit is achieved.
**ELECTRICAL INSTALLATION**

**WARNING**

**THIS INSTALLATION SHOULD ONLY BE CARRIED OUT BY A QUALIFIED AND LICENSED ELECTRICIAN**

**Note:** For ease of installation, the electrical installation must be completed prior to adding any finishing materials.

1) Remove faceplate, inner door frame and glass door (if installed)- refer to instructions in this manual.

2) Remove control board located on the lower right side of the unit, by sliding board out as shown below.

3) Locate wiring harness from Power Vent Module - shown below.

4) Remove access panel - located on the outer right side of the unit, by removing 4 screws in locations shown below.

5) Loosen 2 screws - one on either side of the electrical box. Slide box up and push box back to release.

6) Maneuver and angle electrical box to remove from the base of the unit.

7) Install strain relief grommets into opening in electrical box as shown below.

8) Unravel BX cable to reveal wires - install wire protector where the metal of the BX cable meets the wire.
9) Feed wires from the BX cable through into the box.

10) Tighten up the strain relief grommets on the outside of the box as shown below.

11) Secure the ground wires from each wire bundle (BX cable + power vent) to the box in the location shown below.

12) Connect all like colored wires - blue to blue, red to red, white to white and black to black. Finish wire ends with marettes as shown below.

13) Install the cover on the electrical junction box-secure with 2 screws.

14) Reverse steps 6-1 to complete installation.

15) Plug in Power Vent Module to outlet located on the lower left base of the unit.

Caution: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation.
**WARNING**

Electrical Grounding Instructions

This appliance is equipped with a three-prong (grounding) plug for your protection against shock hazard and should be plugged directly into a properly grounded three-prong receptacle. Do not cut or remove the grounding prong from this plug.

---

**Caution:** Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation.
AERATION ADJUSTMENT

The burner aeration is factory set but may need adjusting due to either the local gas supply or altitude. Open the air shutter for a blue flame or close for a more yellow flame.

For instructions to remove the burner for access to the venturi cap, see pages 46-47 in this manual.

Minimum Air Shutter Opening:

**HIGH ELEVATION**

This unit is approved for altitude 0 to 4500 ft. (CAN1 2.17-M91).

**GAS LINE INSTALLATION**

Since some municipalities have additional local codes it is always best to consult with your local authorities and the CAN/CGA B149 installation code.

For USA installations follow local codes and/or the current National Fuel Gas Code, ANSI Z223.1.

When using copper or flex connectors use only approved fittings. Always provide a union so that gas lines can be easily disconnected for servicing. Flare nuts for copper lines and flex connectors are usually considered to meet this requirement.

**NOTE:** A shutoff / dante valve should be supplied in or near the unit (or as per local codes) for ease of servicing this appliance.

**IMPORTANT:** Always check for gas leaks with a soap and water solution or gas leak detector. Do not use open flame for leak testing.

**PILOT ADJUSTMENT**

Periodically check the pilot flames. Correct flame pattern has two strong blue flames: 1 flowing around the flame sensor and 1 flowing across the burner (it does not have to be touching the burner).

**GAS PIPE PRESSURE TESTING**

The appliance must be isolated from the gas supply piping system by closing its individual manual shut-off valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psig (3.45 kPa). Disconnect piping from valve at pressures over 1/2 psig.

The manifold pressure is controlled by a regulator built into the gas control, and should be checked at the pressure test point.

**Note:** To properly check gas pressure, both inlet and manifold pressures should be checked using the valve pressure ports on the valve.

1) Make sure the valve is in the "OFF" position.
2) Loosen the "IN" and/or "OUT" pressure tap(s), turning counterclockwise with a 1/8" wide flat screwdriver.
3) Attach manometer to "IN" and/or "OUT" pressure tap(s) using a 5/16" ID hose.
4) Light the pilot and turn the valve to "ON" position.
5) The pressure check should be carried out with the unit burning and the setting should be within the limits specified on the safety label.
6) When finished reading manometer, turn off the gas valve, disconnect the hose and tighten the screw (clockwise) with a 1/8" flat screwdriver. **Note:** Screw should be snug, but do not overtighten.

**Note:** If you have an incorrect flame pattern, contact your Regency® dealer for further instructions.

Incorrect flame pattern will have small, probably yellow flames, not coming into proper contact with the rear burner or flame sensor.

886 S.I.T. Valve Diagram

---

Regency Horizon HZ54EPV Gas Fireplace
VALVE COVER REMOVAL

The valve cover will need to be removed to access the valve tray (see valve tray replacement) and also to access the DBFC (see Battery + ON/OFF switch installation).

1) Remove Faceplate and glass door if installed.

2) The valve cover is located on the right side underneath the glass door - loosen 2 screws securing the valve cover (see Diagram 1 below).

3) Slide the valve cover upward.

4) Lift the cover up off the screws and out of the unit.

5) To install - reverse steps.

Optional
REMOTE CONTROL

Use the Regency® Remote Control approved for this unit. Use of other systems may void your warranty.

The remote control comes with a hand held transmitter, a receiver and a wall mounting plate.

1) Choose a convenient location on the wall to install the receiver and the receptacle box (protection from extreme heat is very important). Run wires from the fireplace to that location. Use Thermostat Wire Table.

RECEIVER WALL SWITCH
(Included with Unit)

1) Run the supplied 10’ of the wire harness through the right or left side gas inlet opening- connect the ON/OFF wire harness. Be careful not to damage wire.

2) Connect the wire to the receiver wall switch and install into the low voltage receptacle box.

**CAUTION**
Do not wire millivolt wall thermostat wires to 120V wire.
WALL MOUNT RECEIVER INSTALLATION
REQUIRED FOR ALL INSTALLATIONS - INCLUDING PROFLAME REMOTE CONTROLS

IMPORTANT INSTALLATION NOTE:

The Receiver must be placed inside the supplied (Low Voltage) junction type wall box and installed into the wall only.

DO NOT INSTALL WITHIN THE CONFINES OF THE FIREPLACE.

Wall Mounting

1. Install the junction box to the framing, at desired location within 10 ft. from fireplace.
2. Feed the 12 pin connector through the opening at back of junction box.
3. Connect the 12 pin connector to the back of the receiver.
4. Install the Receiver in the Low Voltage Junction box, supplied with HZ30E.
5. Insert the 4 AA type batteries in the battery compartment with the correct polarity.
6. Place the slider into the cover plate.
7. Put the Receiver switch in the “OFF” position, to allow correct lineup for slider switch.
8. Make sure the Receiver and cover plate words “ON” and “UP” are on the same side.
9. Align the slider with the switch on the Receiver and couple the switch into the slider.
10. Align the screw holes.
11. Using the two (2) screws provided secure the cover plate to the Receiver.

---

Note 1 ~ Proflame Flame Modulator for GTM & GTMF Remote Controls are sold separately. Choice of NG or LP flame modulator (to match unit fuel type). See Regency Retail Price pages for complete details.

Note 2 ~ FPI Proflame Remote Controls come standard with white wall mount switch & cover plate.
**BATTERY INSTALLATION**

1) Install 4 - AA batteries into the receiver, ensure correct polarity.

**GT REMOTE INSTALLATION**

1. GT remote installation - see Proflame remote instructions for coding remote to receiver as well as operating instructions.

12 pin connector - located on outer right side of the firebox.
DFBC = digital fireplace burner control

1) Remove the faceplate and glass door to access the Receiver.

2) Remove the hi/lo knob from the valve head, if installed, by removing 2 screws as shown below.

3) Install the stepper motor in the same location the hi/lo knob was removed from - with 2 screws as shown below.

4) Install 4 - AA batteries into the receiver, ensure correct polarity.

5) Remove the module tray on the right side of the unit to access the DFBC.

6) Plug receiver wires into the back of the receiver and bundle wires with the wire clip as shown below.

7) Connect GTM motor wire from the stepper motor to the wire connector from the receiver wire harness.

8) Program Receiver and transmitter (refer to manual)

Note: DO NOT USE 4 AA batteries on the control module; the DFBC is now powered by the receiver batteries in the wall.
GTMF REMOTE INSTALLATION

DFBC = digital fireplace burner control

1) Remove the faceplate and glass door to access to DFBC & battery pack tray.

2) Lift DFBC and battery pack up and out.

3) Remove the hi/lo knob from the valve head, if installed, by removing 2 screws as shown below.

4) Install the stepper motor in the same location the hi/lo knob was removed from - with 2 screws as shown below.

5) Install 4 - AA batteries into the receiver, ensure correct polarity.

6) Remove the module tray on the right side of the unit to access the DFBC

7) Plug receiver wires into the back of the receiver and bundle wires with the wire clip as shown below.

8) Connect GTM motor wire from the stepper motor to the wire connector from the receiver wire harness.

9) Program Receiver and transmitter (refer to manual)

Note: DO NOT USE 4 AA batteries on the control module; the DFBC is now powered by the receiver batteries in the wall.
10) From the wire harness, plug the FCM wire into the fan control module.

11) Install the fan control module onto the floor of the unit. Place it to the right of the receiver.

12) Plug fan control module into receptacle located on the left hand side of the unit.

13) Match the remote control to the receiver - see remote control instructions.

14) Reverse step 1.

15) Check to ensure there are no gas leaks.
OPTIONAL REFLECTIVE PANEL INSTALLATION

Before installation, panels must be handled and cleaned as per instructions noted below:

<table>
<thead>
<tr>
<th>Stainless Steel Panels</th>
<th>Black Enamel Panels</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Stainless panels must be inspected for scratches and dimples prior to installation. All claims to be recorded at this time. Claims for damage after installation will not receive consideration.</td>
<td>• Black Enamel panels must be inspected for scratches and dimples prior to installation. All claims to be recorded at this time. Claims for damage after installation will not receive consideration.</td>
</tr>
<tr>
<td>• Use a hair dryer to remove the protective coating from the panels.</td>
<td></td>
</tr>
<tr>
<td>• To protect the finish during installation and handling - cotton gloves MUST be worn at all times while handling the panels.</td>
<td></td>
</tr>
<tr>
<td>• Stainless panels will discolor a little during normal operation. This is normal and should not be considered a defect.</td>
<td>• Black Enamel panels will discolor a little during normal operation. This is normal and should not be considered a defect.</td>
</tr>
<tr>
<td>• All hand and finger marks MUST be cleaned off with a soft cloth and a stainless steel cleaner. Most stainless steel cleaners leave a film/residue on the surface of the panels. Use an ammonia based cleaner (ie. glass cleaner) to remove this film before applying heat to the unit. Failure to do this will result in burn stains on panels which you will be unable to remove. Not protected by product warranty.</td>
<td>• All hand and finger marks MUST be cleaned off with a soft cloth. Use an ammonia based cleaner (ie. glass cleaner) to remove any fingerprints before applying heat to the unit. Failure to do this will result in burn stain on panels which you will be unable to remove. Not protected by product warranty.</td>
</tr>
</tbody>
</table>

1) Position the left side panel in place - top of panel in first, then fit the bottom tab into the slot at the bottom of the firebox as shown below. Repeat for right side panel.

- Right side panel in position
- Fit side panel tab into slot
- Left side panel shown
- 90 degree bend faces towards center of unit on both left and right side panels

2) Fit the back panel into position by clearing the pilot shield - bottom of panel goes in first. Then fit the tabs on the bottom left and right side of the back panel into the slots at the base of the firebox.

Secure the back panel in place by placing the brackets over the screws on the top of the inside left and right side of the firebox and tighten the screw to hold the bracket against the back panel shown below.

- Left Side Bracket
- Right side back panel tab fitted into slot
- Bracket shown in place on right side of the firebox
- Right side panel in position
GLASS CRYSTALS OR OPTIONAL CERAMIC STONES
INSTALLATION ON BURNER

Evenly spread the supplied Glass Crystals or optional Ceramic Spa or Garden Stones over the burner. Ensure the crystals (or stones) do not overlap too much as this will effect the flame pattern.

IMPORTANT NOTE:

Only the supplied approved Cobalt Glass, Ceramic Spa Stones or Garden Stones are to be used with these fireplaces. Use of any other type of glass crystals or stones can alter the unit’s performance, any damage caused by the use of any unapproved glass or stones will not be covered under warranty.

When using Ceramic or Garden Stones, DO NOT cover burner ports that lead to pilot flame. Ensure the crystals or stones do not overlap excessively as this will effect the flame pattern.

**NOTE:**
1 Ceramic spa stone package contains 70 stones
1 Garden stone package contains 50 stones

*Recommended - use only 40 of the 70 ceramic stones on the HZ30E burner.
**Recommended - use only 50 of the 70 ceramic stones on the P33S/P33SE burner.
There are 3 optional packages to choose from to cover the firebox base:

1) White River Pebbles
2) Natural River Pebbles
3) Glass Crystals (4 colors available)

Spread the pebbles / crystals evenly on the exposed base of the firebox. Pebbles are **NOT** to be placed anywhere on the burner or over top of the Glass Crystals or optional Ceramic Spa Stones.

**NOTE:** Only the supplied and approved pebbles / crystals are to be used. Use of any other type of pebbles or material can create a danger and will void warranty.

</tbody>
</table>
OPTIONAL LOG SET INSTALLATION

Installation of Reflective Panels must be completed before installing the log set.

Read the instructions below carefully and refer to the images. If the logs are broken do not use the unit until they are replaced. Broken logs can interfere with pilot operation.

Improper positioning of the logs may create carbon build-up and can alter the unit's performance which is not covered under warranty.

Log kit # 476-930 contains the following pieces:

<table>
<thead>
<tr>
<th>Part #</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A x 2</td>
<td>Log</td>
</tr>
<tr>
<td>B x 2</td>

</tr>
<tr>
<td>476-103 x 12</td>
<td>Pin Clips</td>
</tr>
<tr>
<td>946-669</td>
<td>Platinum Embers</td>
</tr>
</tbody>
</table>

1) Remove the following if already installed:
   a) Faceplate
   b) Glass Door
   c) Pebbles
   d) Glass Crystals
   e) Stones

   Note: Aeration Setting is set at 1/2" from the factory. The following are recommended settings for NG and LP units when using the log set:
   - NG = 1/2"
   - LP = Full Open

2) Attach the 12 pin clips to the bottom cover (not the burner) in the exact locations indicated by an X, as shown in Diagram 2 below.

   Note: Front and back measurements originate from the centre line of burner.
   Side measurements originate from front edge of the bottom cover (see Diagram 3).

   Note: Units may have dimples on the burner to indicate pin clip installation points. If dimples are not present on the burner, follow the above directions.

3) Pin clips are attached to the lip edge of the bottom cover (not the burner) see diagrams 3 & 4.
4) Install the glass crystals (see glass crystal installation section in this manual).

5) Place platinum embers on glass crystals as shown in diagram 7.

6) If installing optional pebbles - install pebbles before log installation.
7) Place logs A + B on the burner, rest logs on the pin clips, as shown in diagram 9.

**Note:** Logs should be oriented exactly as shown in diagram 9.

![Diagram 9](log-set-installed-with-optional-pebbles.png)

8) Place logs C + D on logs A + B, as shown in diagram 10.

**Note:** Logs should be oriented exactly as shown in diagram 10.

![Diagram 10](log-set-installed-with-optional-pebbles.png)

9) Install the following:
   
   a) *Glass door*  
   b) *Faceplate and door frame*

*Refer to these sections in the manual for detailed instructions.*

![Diagram 11](log-set-installed-with-optional-pebbles.png)
1) Install the door frame overlay by hooking the top flange over top of the glass door, push in the bottom of the door frame overlay to secure in place.

2) Place 2 of the supplied magnets on the lower corners of the Door Frame Overlay, this will keep the Faceplate in position after it has been installed.

3) Secure the left side mounting bracket to the backside of the faceplate as shown below. Use 3 screws supplied to secure the mounting bracket in place. Repeat for right side.

**NOTE:** Ensure that the faceplate is positioned correctly when installing the mounting brackets to the faceplate. There is a top and bottom, the top of the faceplate has a full 1” return whereas the bottom only has a 1/2” return as shown in the diagram below.
4) Install the faceplate to the unit by hooking the left and right side mounting brackets into the mounting slots at the side of the firebox as shown below. It is recommended that you use the first mounting slot (the one closest to the door frame overlay) out of the 5 so that the faceplate and door frame overlay are flush with one another. See diagram below.

**NOTE:** There are 5 mounting slots available, this is to accommodate any finishing that protrudes slightly beyond the faceplate.

---

**IMPORTANT NOTE**

To ensure the gap between the door frame and the faceplate are equal from side to side you may need to slide the faceplate slightly to the left or right accordingly.

Also if necessary, the faceplate may be adjusted up and down by loosening the top screw as shown in the diagram below and sliding the plate up or down as required.

---

**Completed Faceplate & Door Frame Overlay Installation**
Optional Fan Installation

1) Turn the unit off and allow it to cool down to room temperature.
2) Turn off the gas supply to the unit.
3) Remove the faceplate by lifting it up off the hinges on the sides of the firebox.
4) Remove the door frame overlay by swinging out 45° from the bottom and lift up and out.
5) Remove the glass door.
   a) Remove cover plates from over each screw by pulling away from magnets each as shown below.
   b) Remove the 3 screws shown below at the bottom of the glass door.
   c) Swing the door out 45° from the bottom and lift up and out.
6) Loosen 6 screws that secure the burner extenders on burner tray, located behind the burner on either side of the pilot assembly.

7) Lift out the 2 burner tray extenders.

10) Remove 8 screws to remove the fan access panel cover - located on the left hand side floor of the firebox.

11) Manoeuvre the fan into position on the floor of the unit. Tilt the fan to get through the fan access panel and into position.

12) Secure the fan to the floor of the unit with 2 screws. *See wiring diagram in manual.

13) Attach the ground wire from the fan to the ground lug in the unit. The ground lug is located just in front of the receptacle box on the left side on the floor of the unit. Plug fan

14) Slide the thermidisc into the bracket on the bottom side of the fan access panel - check fan access panel gasket - replace if necessary.
15) Reverse Steps 8 through 5.
16) Install the fan air deflector - it hooks to 2 brackets on to the bottom lip of the unit, to the right of the receiver.

17) Reverse Steps 4 through 1.

18) FOR GTMF INSTALLATIONS ONLY: Install the fan control module into the unit through the open fan access panel. Plug the fan control module into the receptacle in the unit (left side - floor of unit). Plug the fan into the fan control module and connect GTMF remote (see GTMF installation instructions in this manual).

19) Attach the receiver to the unit with the velcro strip. Place the receiver in front of the ground lug on the left side of the unit - inside the bottom frame of the unit - follow steps 15-19 to complete installation.

TO REMOVE THE FAN

1) Turn the power off.
2) Reverse the above instructions.

Maintenance: The sealed bearings are lubricated, there is no need to lubricate them further. (Extra lubricant will cause more lint and dust buildup - causing the bearings to prematurely fail).
Regular cleaning and vacuuming of the fan area will add to the life of the motor.

**IMPORTANT:**
These fans collect a lot of dust from within your home. Ensure you maintain these fan motors on a regular basis by vacuuming the fan blades and housing using a soft brush nozzle.
OPERATING INSTRUCTIONS

1) Read and understand these instructions before operating this appliance.

2) Check to see that all wiring is correct and enclosed to prevent possible shock.

3) Check to ensure there are no gas leaks.

4) Make sure the glass in the glass door frame is properly positioned. Never operate the appliance with the glass removed.

5) Verify that the venting and cap are unobstructed.

6) The unit should never be turned off, and on again without a minimum of a 60 second wait.

LIGHTING PROCEDURE

1) Turn on the wall switch or press and release on ON/OFF button once on the remote control.

2) After approximately 4 seconds the spark ignition system will spark for 60 seconds to light the main burner.

3) The unit will turn on.

Note: The first try for ignition will last approximately 60 seconds. If there is no flame ignition (rectification) the board will stop sparking for approximately 35 seconds. After wait time, the board will start second try for ignition by sparking for approximately 60 seconds. If there is still no positive ignition the board will go into lock out.

The system will need to be reset as follows:

a) Turn the system off using ON/OFF switch or press ON/OFF button - if using optional remote.

b) After approximately 2 seconds turn on ON/OFF switch or press ON/OFF button if using optional remote.

c) Repeat step 2.

SHUTDOWN PROCEDURE

1) Turn ON/OFF switch or press and release the ON/OFF button once if using optional Remote Control.

2) If service is to be performed - you must disconnect the battery.

NORMAL OPERATING SOUNDS OF GAS APPLIANCES

It is possible that you will hear some sounds from your gas appliance. This is perfectly normal due to the fact that there are various gauges and types of steel used within your appliance. Listed below are some examples. All are normal operating sounds and should not be considered as defects in your appliance.

Burner Tray:
The burner tray is positioned directly under the burner and is made of a different gauge material from the rest of the firebox and body. Therefore, the varying thicknesses of steel will expand and contract at slightly different rates which can cause “ticking” and “cracking” sounds. You should also be aware that as there are temperature changes within the unit these sounds will likely re-occur. Again, this is normal for steel fireboxes.

Pilot Flame:
While the pilot flame is on it can make a very slight “whisper” sound.

Gas Control Valve:
As the gas control valve turns ON and OFF, a dull clicking sound may be audible, this is normal operation of a gas regulator or valve.

Unit Body/Firebox:
Different types and thicknesses of steel will expand and contract at different rates resulting in some “cracking” and “ticking” sounds will be heard throughout the cycling process.

Blower Thermopad:
When this thermally activated switch turns ON it will create a small “clicking” sound. This is the switch contacts closing and is normal.

During the first few fires, a white film may develop on the glass front as part of the curing process. The glass should be cleaned after the unit has cooled down or the film will bake on and become very difficult to remove. Use a non-abrasive cleaner and DO NOT ATTEMPT TO CLEAN THE GLASS WHILE IT IS HOT.

DO NOT ATTEMPT TO CLEAN THE GLASS WHILE IT IS STILL HOT!

DO NOT BURN THE UNIT WITHOUT THE GLASS DOOR IN PLACE.
OPERATING INSTRUCTIONS

COPY OF LIGHTING PLATE INSTRUCTIONS

FOR YOUR SAFETY READ BEFORE LIGHTING

This appliance must be installed in accordance with local codes, if any; if none, follow the National Fuel Gas Code, ANSI Z223.1/NFPA 54, or Natural Gas and Propane Installation Codes, CSA B149.1.

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life. Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to the owner’s information manual provided with this appliance. For assistance or additional information consult a qualified installer, service agency or gas supplier.

AVERTISSEMENT. Quiconque ne respecte pas à la lettre les instructions dans la présente notice risque de déclencher un incendie ou une explosion entraînant des dommages, des blessures ou la mort.

Une installation, d’ajustement, de modification, de service ou d’entretien peut provoquer des blessures ou des dommages matériels. Reportez-vous au manuel du propriétaire de l’information fournie avec cet appareil. Pour obtenir de l’aide ou des informations supplémentaires consultez un installateur qualifié, une agence de service ou fournisseur de gaz.

A) This appliance is equipped with an ignition device which automatically lights the pilot.
- Do not touch the pilot by hand.
B) BEFORE OPERATING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.
- WHAT TO DO IF YOU SMELL GAS
  - Do not try to light any appliance.
  - Do not touch any electric switch, do not use any phone in your building.
  - Immediately call your gas supplier from a neighbours phone. Follow the gas supplier’s instructions.
  - If you cannot reach your gas supplier, call the fire department.
C) Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and replace any part of the control system and any gas control which has been underwater.
- Cet appareil est muni d’un dispositif d’allumage qui allume automatiquement la veilleuse.
  - Ne tentez pas d’allumer la veilleuse manuellement.
B) AVANT DE FAIRE FONCTIONNER, reniflez tout autour de l’appareil pour déceler une odeur de gaz. Reniflez près du plancher, car certains gaz sont plus lourds que l’air et peuvent s’accumuler au niveau du sol.
- QUE FAIRE SI VOUS SENTEZ UNE ODEUR DE GAZ :
  - Ne pas tenter d’allumer d’appareil
  - Ne touchez à aucun interrupteur; ne pas vous servir des téléphones se trouvant dans le bâtiment.
  - Appelez immédiatement votre fournisseur de gaz depuis un voisin. Suivez les instructions du fournisseur.
  - Si vous ne pouvez pas rejoindre le fournisseur, appelez le service des incendies
C) N’utilisez pas cet appareil s’il a été plongé dans l’eau, même partiellement. Faites inspecter l’appareil par un technicien qualifié et remplacez toute partie du système de contrôle et toute commande qui ont été plongés dans l’eau.

CAUTION: Hot while in operation. Do not touch. Severe Burns may result. Due to high surface temperatures keep children, clothing and furniture, gasoline and other liquids having flammable vapors away. Keep burner and control compartment clean. See installation and operating instructions accompanying appliance.

LIGHTING INSTRUCTIONS

1) Manually slide the three position slider switch on the Receiver to the ON position.
2) After approximately 4 seconds the spark ignition system will spark for 60 seconds to light the main burner.
3) The unit will turn on.

Note: The first attempt to ignition will last approximately 60 seconds. If there is no flame ignition (rectification) the board will stop sparking for approximately 35 seconds. After this wait time, the board will start a second try for ignition by sparking for approximately 60 seconds. If there is still no positive ignition after the second attempt the board will go into lock out.

The system will need to be reset as follows (after going into lock out mode):
- a) Wait 5 minutes - turn the system off using manual slide switch.
- b) After approximately 2 seconds manually move slider to on or press ON/OFF button if using optional remote.
- c) Unit will repeat step 2.

1) Glisser le commutateur à trois positions sur le récepteur à la position ON.
2) Attendre 4 secondes. Le système d’allumage produira des étincelles pendant 60 secondes afin d’amorcer le brûleur principal.
3) Les flammes s’allumeront.

Remarque : Au premier allumage, le système tente d’allumer les flammes pendant 60 secondes. Si l’essai est infructueux, le système fait une pause de 35 secondes. C’est ce qu’on appelle l’étape de rectification. Ce délai écoulé, le système tente à nouveau d’allumer les flammes en produisant des étincelles pendant 60 secondes. Si les flammes ne s’allument toujours pas, le système se met en mode verrouillage.

b) Après environ 2 secondes pour déplacer manuellement curseur ou appuyez sur la touche ON / OFF si vous utilisez télécommande en option.
- c) L’unité répètera l’étape 2.

TO TURN OFF GAS APPLIANCE

1) Manually slide the three position slider switch on the Receiver to the OFF position.
2) If service is to be performed - you must disconnect power to the unit, from the battery pack, refer to manual.

1) Faites glisser le commutateur à trois positions sur le récepteur à la position OFF.
2) Si le service est effectuée, vous devez débrancher l’appareil, du bloc-piles, voir le manuel d'instruction pour plus de détails.
MAINTENANCE INSTRUCTIONS

1) Always turn off the gas valve before cleaning. For relighting, refer to lighting instructions. Keep the burner and control compartment clean by brushing and vacuuming at least once a year.

2) Clean appliance and door with a damp cloth (never when unit is hot). Never use an abrasive cleaner. The glass should be cleaned with a glass cleaner. The glass should be cleaned when it starts looking cloudy.

3) The faceplate is finished in a heat resistant paint and should only be refinished with heat resistant paint. Regency® uses StoveBright Paint - Metallic Black #6309.

Note: Faceplates and inner panels made from stainless steel will naturally change color over time.

4) Make a periodic check of burner for proper position and condition. Visually check the flame of the burner periodically, making sure the flames are steady; not lifting or floating. If there is a problem, call a qualified service person.

5) The appliance and venting system must be inspected before use, and at least annually, by a qualified field service person, to ensure that the flow of combustion and ventilation air is not obstructed.

Note: Never operate the appliance without the glass properly secured in place.

6) Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

7) In the event this appliance has been serviced check that the vent-air system has been properly resealed & reinstalled in accordance with the manufacturer’s instructions.

8) Verify operation after servicing.

GENERAL VENT MAINTENANCE

Conduct an inspection of the venting system semi-annually. Recommended areas to inspect as follows:

1) Check the Venting System for corrosion in areas that are exposed to the elements. These will appear as rust spots or streaks, and in extreme cases, holes. These components should be replaced immediately.

2) Remove the Cap, and shine a flashlight down the Vent. Remove any bird nests, or other foreign material.

3) Check for evidences of excessive condensation, such as water droplets forming in the inner liner, and subsequently dripping out the joints. Continuous condensation can cause corrosion of caps, pipe, and fittings. It may be caused by having excessive lateral runs, too many elbows, and exterior portions of the system being exposed to cold weather.

4) Inspect joints, to verify that no pipe sections or fittings have been disturbed, and consequently loosened. Also check mechanical supports such as Wall Straps, or plumbers’ tape for rigidity.

GLASS GASKET

If the glass gasket requires replacement use a tadpole glass gasket (Part # 936-159).

GLASS DOOR

Your Regency® fireplace is supplied with high temperature 5mm-Ceramic glass. If your glass requires cleaning, we recommend using an approved glass cleaner available at all authorized dealers. Do not use abrasive materials.

CAUTION & WARNINGS:
* Do not clean when the glass is hot.
* The use of substitute glass will void all product warranties.
* Care must be taken to avoid breakage of the glass.
* Do not strike or abuse the glass.
* Do not operate this fireplace without the glass front or with a cracked or broken glass front.
* Wear gloves when removing damaged or broken glass.
* Replacement of the glass panel(s) should be done by a licensed or qualified service per son.

GLASS REPLACEMENT

In the event that you break your glass by impact, purchase your replacement from an authorized Regency® dealer only.

Replacement glass is shipped already installed into the door frame.

CAUTION: Wear gloves when removing damaged or broken glass.

WARNING: Do not operate the appliance with the glass panels removed, cracked or broken. Replacement of the glass panels should be done by a licensed or qualified service person.
MAINTENANCE

GLASS DOOR REMOVAL

1) Turn the unit off and allow it to cool down to room temperature.
2) Turn off the gas supply to the unit.
3) Remove the faceplate by lifting it up off the hinges on the sides of the firebox.
4) Remove the door frame overlay by swinging out 45° from the bottom and lift up and out.
5) Remove the glass door.
   a) Remove the 3 screws shown below at the bottom of the glass door.
   b) Swing the door out 45° from the bottom and lift up and out.
6) Remove valve cover - (see valve cover removal section in this manual).
VALVE TRAY REPLACEMENT

1) Turn the unit off and allow it to cool down to room temperature.

2) Turn off the gas supply to the unit.

3) Remove the faceplate by lifting it up off the hinges on the sides of the firebox.

4) Remove the door frame overlay by swinging out 45° from the bottom and lift up and out.

5) Remove the glass door.
   a) Remove cover plates from over each screw by pulling away from 2 magnets each as shown below.
   b) Remove the 3 screws shown below at the bottom of the glass door.
   c) Swing the door out 45° from the bottom and lift up and out.

Note: See next pages for specific instructions for NG / LP units.

Prior to removing burner - remove the following (if installed):
- crystals
- pebbles
- spa stones
- logs
- inner panels
1) Loosen 6 screws that secure the burner extenders on burner tray, located behind the burner on either side of the pilot assembly.

2) Lift out the 2 burner tray extenders.

4) After extenders have been removed, remove the 2 screws that secure the burner tray, at the base of the firebox.

5) Slide the burner to the left and lift it out.

6) With burner removed - lift out burner tray.

7) Disconnect the green and orange wires from the valve.

8) Disconnect the green ground wire from the valve bracket.

9) Remove the valve tray by undoing 12 screws.

10) Partially lift out valve tray.

11) Disconnect the inlet gas line.

12) Replace valve and reverse steps.

WARRANTY

Regency® Fireplace Products are designed with reliability and simplicity in mind. In addition, our internal Quality Assurance Team carefully inspects each unit thoroughly before it leaves our facility. Regency® Fireplace Products is pleased to extend this limited lifetime warranty to the original purchaser of a Regency® Product. This warranty is not transferable.

The Warranty: Limited Lifetime
The combustion chamber, heat exchanger, burner tubes/pans, logs, glass crystals, ceramic spa stones, pebbles, brick panels and gold plating (against defective manufacture only) are covered under the Limited Lifetime Warranty for five (5) years parts and subsidized labour* and parts only thereafter.

Glass is covered for lifetime against thermal breakage only, parts and subsidized labour* for five (5) years parts only thereafter from date of purchase.

External casting, surrounds and grills are covered against cracks and warps resulting from manufacturer defects, parts and subsidized labour* for three (3) years from the date of purchase and parts only thereafter.

Special Finishes - One year on stainless steel panels, nickel overlays, nickel faceplates, brushed nickel and antique copper full screens and doors. You can expect some changes in color as the product "ages" with constant heating and cooling. FPI warranties the product for any manufacturing defects on the original product. However, the manufacturers warranty does not cover changing colors and marks, ie. finger prints, etc applied after the purchase of the product. Damage from the use of abrasive cleaners is not covered by warranty.

Electrical and mechanical components such as blowers, switches, wiring, thermodiscs, FPI remote controls, spill switches, thermopiles, thermocouples, pilot assembly components, and gas valves are covered for two years parts and one year subsidized labour* from the date of purchase. Blowers and valves replaced under warranty are considered repairs and continue as if new with appliance. ie. twelve (12) months from original purchase date of appliance with a minimum of three (3) months coverage from date of replacement.

FPI venting components are covered parts and subsidized labour* for three (3) years from date of purchase.

Simpson Dura-Vent venting components (Direct Vent units) are covered by Simpson Dura-Vent Inc. warranty.

Repair/replacement parts purchased by the consumer from FPI after the original coverage has expired on the unit will carry a 90 day warranty, valid with a receipt only. Any item shown to be defective will be repaired or replaced at our discretion. No labor coverage is included with these parts.

Conditions:
Any part or parts of this unit which in our judgement show evidence of such defects will be repaired or replaced at FPI's option, through an accredited distributor or agent provided that the defective part be returned to the distributor or agent Transportation Prepaid, if requested.

Porcelain/Enamel - Absolute perfection is either guaranteed nor commercially possible. Any chips must be reported and inspected by an authorized dealer within three days of installation. Reported damage after this time will be subject to rejection.

At all times FPI reserves the right to inspect product in the field which is claimed to be defective.

The authorized selling dealer is responsible for all in-field service work carried out on your Regency® product. FPI will not be liable for results or costs of workmanship from unauthorized service persons or dealers.

All claims must be submitted to FPI by authorized selling dealers. It is essential that all submitted claims provide all of the necessary information including customer name, purchase date, serial #, type of unit, problem, and part or parts requested, without this information the warranty will be invalid.

Exclusions:
This limited Lifetime Warranty does not extend to or include paint, door or glass gasketing or trim.

At no time will FPI be liable for any consequential damages which exceed the purchase price of the unit. FPI has no obligation to enhance or modify any unit once manufactured. ie. as products evolve, field modifications or upgrades will not be performed.

FPI will not be liable for travel costs for service work.

Installation and environmental problems are not the responsibility of the manufacturer and therefore are not covered under the terms of this warranty policy.

Embers, rockwool, gaskets, door handles and paint are not covered under the terms of this warranty policy.

Any unit which shows signs of neglect or misuse is not covered under the terms of this warranty policy.

The warranty will not extend to any part which has been tampered with or altered in any way, or in our judgment has been subject to misuse, improper installation, negligence or accident, spillage or downdrafts caused by environmental or geographical conditions, inadequate ventilation, excessive offsets, negative air pressure caused by mechanical systems such as furnaces, fans, clothes dryer, etc.

Freight damage to stoves and replacement parts is not covered by warranty and is subject to a claim against the freight carrier by the dealer.

FPI will not be liable for acts of God, or acts of terrorism, which cause malfunction of the appliance.

Performance problems due to operator error will not be covered by this warranty policy.

Products made or provided by other manufacturers and used in conjunction with the operation of this appliance without prior authorization from FPI, may nullify your warranty on this product.

Any alteration to the unit which causes sooting or carboning that results in damage to the interior / exterior facia is not the responsibility of FPI.

* Subsidy according to job scale as predetermined by FPI.
