

Regency® Gi25LE Gas Insert

Owners & Installation Manual

www.regency-fire.com

MODELS: Gi25LE-NG Natural Gas
 Gi25LE-LP Propane

⚠ Warning

Fire or explosion Hazard

failure to follow safety warnings exactly could result in serious injury, death, or property damage.

- Do not store or use gasoline or other flammable vapours and liquids in the vicinity of this or any other appliance.

- WHAT TO DO IF YOU SMELL GAS

- Do not try to light any appliance.
- Do not touch any electrical switch: do not use any phone in your building.
Leave the building immediately.
- Immediately call your gas supplier from a neighbour's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.

- Installation and service must be performed by a qualified installer, service agency or the gas supplier.

Tested by:

Certified to/Certifié pour : ANSI Z21.88:19 (R2024)
CSA 2.33:19 (R2024)
CSA 2.17:17 (R2022)

Installer: Please complete the details on the back cover and leave this manual with the homeowner.
Homeowner: Please keep these instructions for future reference.

TO THE NEW OWNER

Congratulations! You are the owner of a state-of-the-art gas insert by Regency.

The Regency gas insert series of handcrafted appliances is designed to provide you with all the warmth and charm of a fireplace at the flick of a switch. The Gi25LE is approved by Intertek for safety and efficiency. As it also bears Regency's mark, it promises economy, comfort, and security for many trouble-free years to come.

Please take a moment to acquaint yourself with the instructions in this manual, as well as the many features of your Regency fireplace.

DANGER

**HOT GLASS WILL
CAUSE BURNS**

**DO NOT TOUCH GLASS
UNTIL COOLED**

**NEVER ALLOW CHILDREN
TO TOUCH GLASS**

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and must be installed for the protection of children and other at risk individuals.

CAUTION:
HOT WHILE IN OPERATION. DO NOT TOUCH.
SEVERE BURNS MAY RESULT. KEEP CHILDREN, CLOTHING, FURNITURE,
GASOLINE, AND ANY OTHER LIQUIDS WITH FLAMMABLE VAPOURS AWAY.

**KEEP BURNER AND CONTROL COMPARTMENT CLEAN.
SEE INSTALLATION AND OPERATING INSTRUCTIONS ACCOMPANYING
APPLIANCE.**

**NATIONAL
FIREPLACE
INSTITUTE**

CERTIFIED
www.nficertified.org

We recommend that our products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) or in Canada by Wood Energy Technical Training (WETT).

**Wood Energy
Technical Training**
www.wett.org

This product can be installed in an aftermarket, permanently located manufactured home (USA only), or mobile home where not prohibited by local codes.

This appliance is for use with the type of gas indicated on the rating plate only. This appliance is not convertible for use with other gases unless a certified kit is used.

This appliance must be installed in accordance with local codes, if any; if none, follow the National Fuel Gas Code, ANSI Z223.1, or Natural Gas and Propane Installation Code, CSA B149.1.

This appliance is only for use with the type of gas indicated on the rating plate and may be installed in an aftermarket, permanently located, manufactured home (USA only) or mobile home, where not prohibited by local codes. See owner's manual for details.

WARNING: This fireplace has been converted for use with a gas fireplace insert only and cannot be used for burning wood or solid fuels unless all original parts have been replaced, and the fireplace re-approved by the authority having jurisdiction.

Cet appareil doit être installé conformément aux codes et règlements locaux, ou, en l'absence de tels règlements, conformément au National Fuel Gas Code ANSI Z223.1, ou au CSA-B149.1 en vigueur.

Cet appareil doit être utilisé uniquement avec les types de gaz indiqués sur la plaque signalétique et peut être installé dans une maison préfabriquée (É.-U. seulement) ou mobile installée à demeure si les règlements locaux le permettent. Voir la notice de l'utilisateur pour plus de renseignements.

AVERTISSEMENT : Ce foyer a été converti pour être utilisé avec un foyer au gaz encastrable et ne peut être utilisé pour brûler du bois ou d'autres combustibles solides à moins que toutes les pièces d'origine aient été remises en place et que le foyer ait été homologué de nouveau par une autorité compétente.

This vented gas fireplace heater is not for use with air filters.
For use with glass doors certified with the appliance only.
For use only with barrier (Part # 262-028/P) Follow installation instructions.

Ne pas utiliser de filtre à air avec ce foyer au gaz à évacuation.
Pour utilisation uniquement avec les portes en verre certifiées avec l'appareil.
Pour utilisation uniquement avec l'écran(Pièce n°262-028/P)
Suivre les consignes d'installation.

NOTE
Regency units are constantly improving. Check the safety label on the unit and if it is different from the copy provided here, the label on the unit is correct.

For the State of Massachusetts, installation and repair must be done by a plumber or gas fitter licensed in the Commonwealth of Massachusetts.

For the State of Massachusetts, flexible connectors shall not exceed 36 inches in length.

For the State of Massachusetts, the appliance's individual manual shutoff must be a t-handle type valve.

The State of Massachusetts requires the installation of a carbon monoxide alarm in accordance with NFPA 720 and a CO alarm with battery backup in the same room where the gas appliance is installed.

To find the safety label, remove faceplate from the front of your unit (see manual); the safety label is located below the glass (see picture).

DO NOT REMOVE THE LABEL FROM THE UNIT.

Gas Installation Checklist

This general checklist does not contain all pertinent installation details or specifics and does not supersede the guidelines in this manual. Your Regency dealer/installer should use it in conjunction with manual instructions. Please follow all local codes and jurisdictions in authority.

Customer: _____	Date Installed: _____	
Install Address: _____	Location of Fireplace: _____	
Serial No: _____	Installer: _____	
Model No: _____		
Site Requirements	YES	NO
If applicable, are the insulation, vapour barrier, and drywall present if installed on an outside wall or chase?		
Does the area have a solid continuous base to support the unit?		
Will the area accommodate the size of the appliance and all clearances?		
Are the gas and electrical roughed into the area where the unit is being installed?		
In City & Grandview series cool wall applications, is the chase enclosure sealed to prevent heat from escaping? All hot air from the unit must exit via the mandatory ventilation openings.		
In City & Grandview applications, Is the chase enclosure vented with the mandatory heat ventilation openings? See manual for details.		
If applicable, is the masonry/factory built freplace in its original condition with no modifications?		
If applicable, have the hearth requirements been met?		
Unit Setup	YES	NO
If applicable, are the standoffs and top nailing flange extensions installed and at the correct depth to accommodate finishing material? See manual for details.		
If applicable, is the fireplace level and secured, meeting framing clearances? See manual for details.		
If applicable, is the unit converted to top or rear vent per manual instructions, and the insulation discarded?		
Venting	YES	NO
Are the venting components approved for the unit installed?		
Does the venting configuration comply with venting diagrams?		
Is venting installed and secured, and are clearances for the vent pipe and termination cap maintained?		
If applicable, was a 1/4" rise maintained for every foot of horizontal run?		
Was the termination installed and sealed?		
Is the direct vent termination at the highest point in the vent assembly?		
If applicable, are both chimney liners continuous from flue collars to termination?		
Electrical and Wiring	YES	NO
Is the appliance connected to the household's 110/120v per local codes? Check local codes for receptacle placement.		
Were the connections in the fireplace tested with a circuit tester?		
Is the appliance properly grounded?		
If applicable, is the supplied electrical/gang box affixed to the wall to facilitate the mounting of the receiver/battery box ?		
If applicable, is all electrical, Ethernet, HDMI, networking, optical, wire/cables, conduits, etc. run through the wood or steel stud work as wires/cables of any kind cannot be exposed directly above or over the fireplace?		
Gas	YES	NO
Does the supply pressure meet the requirements shown on the rating plate?		
Was a conversion performed?		
Was a leak check performed and manifold pressures verified?		

installation

Is the shut-off valve installed and easily accessible to the customer?		
Finishing	YES	NO
If applicable, is only noncombustible material installed in the noncombustible areas?		
Do clearances meet installation and manual requirements?		
Do the mantels and/or projections comply with the installation manual?		
If applicable, was the solid fuel fireplace warning plate installed?		
Is the chase enclosure fully open the full width, height and depth above the fireplace as per the requirements noted in the framing section?		
Appliance Media Setup	YES	NO
Do commands from the remote or wall switch light the pilot and main burner?		
Are the burner media/log set, glass door, and screen installed per instructions in the manual?		
Was the air shutter on the proper setting after running the unit for 20 minutes?		
If applicable, were the surround and trims installed according to the manual?		
Was the operation of the fan, lights (if installed), and flame modulation checked?		
Customer Tutorial and Presentation	YES	NO
Is the customer confident operating the new gas appliance and aware of all the features on the remote?		
Confirm that the rating and lighting plates are attached to the appliance. Do not remove.		
Was the customer informed of the location of the rating and lighting plates?		
Was accessing unit controls in a power outage explained to the customer?		
Are the model and serial numbers and the date of installation of the unit written in the manual and on the checklist?		
Were the warranty and unit registration reviewed with the customer?

owner's information

Important Message

SAVE THESE INSTRUCTIONS

The Gi25LE gas insert must be installed in accordance with the instructions in this manual; read them carefully before installing the unit. Consult the authority having jurisdiction to determine the need for permits prior to starting the installation. It is the responsibility of the installer to ensure this fireplace is installed in compliance with the manufacturer's instructions and all applicable codes.

Before You Start

We are required by the Canadian Safety Standards and ANSI Standards to make you aware of the following.

INSTALLATION AND REPAIR SHOULD BE DONE BY AN AUTHORIZED SERVICE PERSON. THE APPLIANCE SHOULD BE INSPECTED BEFORE USE AND AT LEAST ANNUALLY BY A PROFESSIONAL SERVICE PERSON. MORE FREQUENT CLEANING MAY BE REQUIRED DUE TO LINT FROM CARPETING, BEDDING MATERIAL, ETC. IT IS IMPERATIVE THAT CONTROL COMPARTMENTS, BURNERS, AND CIRCULATING AIR PASSAGEWAYS OF THE APPLIANCE ARE KEPT CLEAN.

 **WARNING: Cancer and Reproductive Harm**
www.P65Warnings.ca.gov

919-874

WARNING: FAILURE TO INSTALL THIS APPLIANCE CORRECTLY WILL VOID YOUR WARRANTY AND MAY CAUSE A SERIOUS HOUSE FIRE.

DUE TO HIGH TEMPERATURES, THE APPLIANCE SHOULD BE LOCATED OUT OF TRAFFIC AND AWAY FROM FURNITURE AND DRAPERIES.

CHILDREN AND ADULTS SHOULD BE ALERTED TO THE HAZARDS OF HIGH SURFACE TEMPERATURES, ESPECIALLY THE FIREPLACE GLASS, AND SHOULD STAY AWAY TO AVOID BURNS OR CLOTHING IGNITION.

A BARRIER DESIGNED TO REDUCE THE RISK OF BURNS FROM THE HOT VIEWING GLASS IS PROVIDED WITH THIS APPLIANCE AND SHALL BE INSTALLED FOR THE PROTECTION OF CHILDREN AND OTHER AT-RISK INDIVIDUALS

CLOTHING OR OTHER FLAMMABLE MATERIAL SHOULD NOT BE PLACED ON OR NEAR THE APPLIANCE.

IF THE BARRIER BECOMES DAMAGED, IT MUST BE REPLACED WITH THE MANUFACTURER'S BARRIER FOR THIS APPLIANCE.

ANY SAFETY SCREEN, GUARD, OR BARRIER REMOVED FOR SERVICING AN APPLIANCE MUST BE REPLACED PRIOR TO OPERATING THE APPLIANCE.

For Your Safety

This appliance requires air for proper combustion. Always provide adequate combustion and ventilation air. Follow instructions and information in CSA B149.1 (in Canada) or the National Fuel Gas Code ANSI Z223.1 (in the USA), regarding requirements for combustion and ventilation air.

Specifications

At pressures over 1/2 psig, the pipe to the unit must be disconnected.

Gas Max. Input Capacity:

Natural Gas 20,500 Btu/h (0-4000 ft./0-1370 m)
Propane 20,500 Btu/h (0-4000 ft./0-1370 m)

Min. Input

Natural Gas 14,500 Btu/h (0-4,000 ft./0-1370 m)
Propane 17,000 Btu/h (0-4,000 ft./0-1370 m)

Fuels: Approved for use with natural gas and propane. Approved as is for use at 0' to 4,500' (0-1,370 m).

Electrical: 120 V A.C. system.

Circulation Fan: Variable speed, 140 CFM.

Log Set: Ceramic fibre, 5 per set

Vent System: 3" (76 mm) co-linear aluminum flex (intake & exhaust). The unit's thermal efficiency rating is determined under continuous operating conditions, independent of any installed system.

See note on On/Off switch in this manual.

On/Off Switch

The switch must be in the ON position (flipped to the right) for the remote to turn the unit on. Moving the switch to the left will turn the burner off.

NOTES

- This ON/OFF switch will be located on the lower left-hand side of the appliance as shown above.
- This ON/OFF switch overrides the remote functionality. Ensure switch is left in ON position when using the remote control.

Lighting Procedure

IMPORTANT: The remote control system supplied with this appliance must be used for lighting with the ON/OFF key on the hand held transmitter. Prior to operating this appliance, please read the remote control operating instructions (packaged with remote control) to understand how to operate this remote control system.

1. Press and release the ON/OFF button on the remote handheld transmitter (see Diagram 1). An audible beep should be heard from the receiver.

Diagram 1
Remote shown in Manual Mode on Hi

2. After approximately 4 seconds the spark ignition system will spark for 60 seconds to light the pilot.
3. The unit will turn on.

Figure 1: Proflame Transmitter

Note: The first try for ignition will last approximately 60 seconds. If there is no flame ignition (rectification) the board will stop sparking for approximately 35 seconds. After wait time, the board will start second try for ignition by sparking for approximately 60 seconds. If there is still no positive ignition the board will go into lock out.

The system will need to be reset as follows:

- a) Turn the system off by pressing the ON/OFF button on the remote.
- b) Wait 5 minutes then repeat from step 2.

Shutdown Procedure

1. Press the ON/OFF button on the remote.
2. If the service is to be performed, - you must disconnect power and shut off gas to the unit.

Fan Operation: The standard fan can be operated by using the remote control supplied with this unit. See remote control instructions.

Note: In thermostat mode: When the appliance is turned on, the fan will not come on for the first 5 minutes (if fan is turned on). When the appliance is turned off the fan will not turn off for 12 minutes (if in on position)

Manual mode: Fan will turn on and off immediately using the remote control transmitter if the fan function is in the "on" position.

Continuous Pilot/Intermittent Pilot (CPI/IPI) **selection**

See remote control instructions for details.

On Demand Pilot (seven day safety timer)

Important information if using the appliance in CPI (continuous pilot mode) only

This appliance is a ProFlame 2 system fitted with the "On Demand" Pilot, a safety feature which will shut down the gas valve completely by extinguishing the pilot light in the event of a continuous full seven days of inactivity.

This only applies if the CPI (continuous pilot) switch is in the "on" position in your remote control transmitter.

Each time the main burner shuts down, manually or through the call from the thermostat, the seven day timer starts again.

The seven day inactivity timer is controlled within the circuit board. Therefore, if in CPI mode and when the pilot light is extinguished after seven straight days of inactivity, the CPI setting on the remote control transmitter will remain in the "CPI" (continuous pilot) position. Therefore, all that is required to relight the pilot would be to press the on/off button on the remote control transmitter from "on" to "off" and back to "on". Once the pilot has re-established operation will resume as normal. There is no requirement to do anything with the IPI/CPI mode on the remote control transmitter.

If the unit never goes as long as seven full days without a call for heat, the pilot will remain lit until it is manually shut-off.

If the unit is being operated in IPI (intermittent pilot) mode, neither the above instructions nor the seven day timer will apply.

See the instructions in this manual and on the Lighting Instructions plate on the appliance to light or re-light the pilot.

owner's information

Temperature indication Display

With the system in the "OFF" position, press the Thermostat Key and the Mode Key at the same time. Look at the LCD screen on the transmitter to verify that a C or F is visible to the right of the room temperature display (Figures 4 & 5).

Figure 4: Remote Control display in Fahrenheit.

Figure 5: Remote Control display in Celsius.

Turn on the Appliance

With the system OFF, press the ON/OFF Key on the Transmitter. The Transmitter display will show some other active Icons on the screen. At the same time the IFC will activate the appliance. A single "beep" from the IFC will confirm reception of the command.

Figure 6: Remote Control display

Turn off the Appliance

With the system ON, press the ON/OFF Key on the Transmitter. The Transmitter LCD display will only show the room temperature (Fig. 6). At the same time the IFC will turn off the appliance. A single "beep" from the IFC confirms reception of the command.

Remote-Flame Control

The Proflame has six (6) flame levels. With the system on, and the flame level at the maximum in the appliance, pressing the Down Arrow Key once will reduce the flame height by one step until the flame is turned off. The Up Arrow Key will increase the flame height each time it is pressed. If the Up Arrow Key is pressed while the system is on but the flame is off, the flame will come on in the high position (Fig. 7 & 8). A single "beep" will confirm reception of the command.

Fig. 7

Flame Off

Flame Level 1

Fig. 8

Flame level 5

Flame Level Maximum

Room Thermostat (Transmitter Operation)

The Remote Control can operate as a room thermostat. The thermostat can be set to a desired temperature to control the comfort level in a room. To activate this function, press the Thermostat Key (Fig. 1). The LCD display on the Transmitter will change to show that the room thermostat is "ON" and the set temperature is now displayed (Fig. 9). To adjust the set temperature, press the Up or Down Arrow Keys until the desired set temperature is displayed on the LCD screen of the Transmitter.

Figure 9

Figure 10

Smart Thermostat (Transmitter Operation)

The Smart Thermostat function adjusts the flame height in accordance to the difference between the set point temperature and the actual room temperatures. As the room temperature gets closer to the set point the Smart Function will modulate the flame down.

To activate this function, press the Thermostat Key (Fig. 1) until the word "SMART" appears to the right of the temperature bulb graphic (Fig. 11). To adjust the set temperature, press the Up or Down Arrow Keys until the desired set temperature is displayed on the LCD screen of the Transmitter (Fig. 12).

Note. When Smart Thermostat is activated, manual flame height adjustment is disabled.

Figure 11: Smart Flame Function

Figure 12

Fan Speed Control

If the appliance is equipped with a hot air circulating fan, the speed of the fan can be controlled by the Proflame system. The fan speed can be adjusted through six (6) speeds. To activate this function use the Mode Key (fig.1) to index to the fan control icon (Fig. 13). Use the Up/Down Arrow Keys (fig.1) to turn on, off or adjust the fan speed (fig. 14). A single "beep" will confirm reception of the command.

Figure 13

Figure 14

owner's information

Continuous Pilot/Intermittent Pilot (CPI/IPI) selection

With the system in "OFF" position press the Mode Key (Fig. 1) to index to the CPI mode icon (Fig. 19 & 20).

Pressing the Up Arrow Key will activate the Continuous Pilot Ignition mode (CPI). Pressing the Down Arrow Key will return to IPI. A single "beep" will confirm the reception of the command.

Figure 20

Thermostat Icon: If the thermostat icon is not present on the remote transmitter, follow instructions noted below:

1. Remove one battery from the remote.
2. Press and hold down the Thermostat button on the remote.
3. Reinstall the battery (removed in Step 1) while still holding down thermostat button.
4. If you see "**Set**" the thermostat option is now enabled. If you see "**Clr**" the thermostat option is now disabled.
5. Repeat the procedure if the "**Set**" or "**Clr**" to remove or add the option back to the remote did not appear.

Enable all other functions if not present on the remote transmitter, follow instructions noted below:

1. Remove one battery from remote.
2. Press and hold both the **ON/OFF** and **MODE** button at the same time.
3. Reinstall battery removed in Step 1 while holding both buttons—keep holding buttons, then release the **MODE** button only.
4. The screen will show either "**Clr**" or "**Set**" as the first option available is to disable or enable a mode.
5. "**Clr**" will remove a mode—use the up or down arrow while holding down **ON/OFF** and **MODE** (mode icon will disappear once removed).
6. Use the "**MODE**" button to move to the next function.
7. "**Set**" will add a mode—use the up or down arrow while holding down **ON/OFF** and **MODE** (mode icon will appear when added).
8. Use the "**MODE**" button to move to the next function.

Note: You should never program out the fan (if installed) or CPI/IPI mode on the remote.

Key Lock

This function will lock the keys to avoid unsupervised operation.

To activate this function, press the MODE and UP Keys at the same time (fig. 21).

To de-activate this function, press the MODE and UP Keys at the same time.

Figure 21

Low Battery Power Detection Transmitter

The life span of the remote control batteries depends on various factors: quality of the batteries used, the number of ignitions of the appliance, the number of changes to the room thermostat set point, etc.

When the Transmitter batteries are low, a Battery Icon will appear on the LCD display of the Transmitter (Fig. 22) before all battery power is lost. When the batteries are replaced this Icon will disappear.

Figure 22

Proflame II Remote Control Operating Instructions

IMPORTANT: The Proflame Transmitter 2 is an integrated part of the Proflame 2 System, which consists of these elements:

- Proflame 2 Transmitter, to be used in conjunction with:
- Integrated Fireplaces Control (Proflame 2 IFC)

The Proflame 2 Transmitter provides for controlling the following hearth appliance functions:

1. Main Burner On/Off
2. Main Burner flame modulation (6 levels)
3. Choice of standing or intermittent pilot (CPI/IPI)
4. Thermostat and Smart thermostat functions
5. Accent light modulation (6 levels)**
6. Split flow valve**
7. Comfort Fan speed modulation (6 levels)

** This feature is not available on this model.

The Proflame Transmitter uses a streamline design with a simple button layout and informative LCD display (Fig. 1). A Mode Key is provided to index between the features and a Thermostat Key is used to turn on/off or index through Thermostat functions (Fig. 1 & 2). Additionally, a Key Lock feature is provided (Fig. 22).

Figure 1: Proflame Transmitter

Figure 2: Transmitter LCD Display

TECHNICAL DATA REMOTE CONTROL	
Supply Voltage	4.5V (three 1.5V AAA batteries)
Ambient temperature ratings	0 - 50°C (32 - 122°F)
Radio Frequency	315 MHZ

WARNING: THE TRANSMITTER AND IFC ARE RADIO FREQUENCY DEVICES.

ATTENTION!

- Turn "OFF" the main gas supply of the appliance during installation or maintenance of the IFC.

- Turn "OFF" main gas supply to the appliance prior to removing or reinserting the batteries.

- In case of remote control malfunction, turn off the IFC device using the "ON/OFF" main switch.

- For installation / maintenance, switch off the IFC device removing main power supply plug.

OPERATING PROCEDURE

Pairing the Remote Control to IFC (if Required)

Power the IFC. Locate the black remote sync button on the lower left hand side of the appliance. See this manual for location/instructions. The IFC will "beep" three (3) times to indicate that it is ready to synchronize with a Transmitter. Install the 3 AAA type batteries in the Transmitter battery bay, located on the base of the Transmitter. (fig. 3) With the batteries already installed in the Transmitter, push the On button. The IFC will "beep" four times to indicate the Transmitter's command is accepted and sets to the particular code of that Transmitter. The system is now initialized.

Note: Only use regular alkaline batteries. Do not use rechargeable or lithium batteries.

Figure 3: Battery Compartment

Remote / Receiver Coding

The remote control is coded at the factory. If for what ever reason , the remote requires to be recoded follow steps below.

To code the receiver to the hand-held remote, follow the procedure below.

1. Remove screen assembly
2. Plug in 120 AC power cord into a grounded receptacle, or install 4 AA batteries into the backup battery holder. Do not use both 120 AC power and batteries. Only use the 4 AA batteries if 120 AC is not available.
3. Install 3 AAA batteries into the hand-held remote.
4. Hold down the black remote sync button on the left side until 3 beeps are heard.
5. Hold down the On / Off button on the hand-held remote to code the remote to the receiver. After 4 beeps are heard, the hand-held remote is paired with the receiver

Backup Battery Holder

Insert 4 AA batteries into the backup battery holder as shown below. Only use the 4 AA batteries if 120 AC is not available.

Note: Only use alkaline batteries. Do not use rechargeable batteries.

Copy of Lighting Plate Instructions

FOR YOUR SAFETY READ BEFORE LIGHTING POUR VOTRE SÉCURITÉ – À LIRE AVANT LA MISE EN MARCHÉ

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life. Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to the owner's information manual provided with this appliance. For assistance or additional information consult a qualified installer, service agency or gas supplier.

AVERTISSEMENT : Quiconque ne respecte pas scrupuleusement les instructions de la présente notice risque de déclencher un incendie ou une explosion pouvant entraîner des dégâts matériels ou des blessures pouvant être mortelles. Tout défaut d'installation, de réglage, de modification, de service ou d'entretien peut entraîner des blessures ou des dommages matériels. Reportez-vous au manuel d'utilisation fourni avec cet équipement. Pour obtenir de l'aide ou des informations complémentaires, consulter un installateur ou un service d'entretien qualifié, ou le fournisseur de gaz.

- A) This appliance is equipped with an ignition device which automatically lights the pilot.
Do not try to light the pilot by hand.
- B) **BEFORE OPERATING** smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.
WHAT TO DO IF YOU SMELL GAS
- Do not try to light any appliance.
 - Do not touch any electric switch, do not use any phone in your building.
 - Leave the building immediately.
 - Immediately call your gas supplier from a neighbour's phone. Follow the gas supplier's instructions.
 - If you cannot reach your gas supplier, call the fire department.
- C) Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been underwater.
- A) Cet appareil est muni d'un dispositif d'allumage qui allume automatiquement la veilleuse.
Ne tentez pas d'allumer la veilleuse manuellement.
- B) **AVANT LA MISE EN MARCHÉ**, reniflez tout autour de l'appareil pour détecter une odeur de gaz. Reniflez au niveau du plancher, car certains gaz sont plus lourds que l'air et peuvent s'accumuler au niveau du sol.
- QUE FAIRE SI VOUS SENTEZ UNE ODEUR DE GAZ :**
- Ne tentez pas d'allumer l'appareil
 - Ne touchez à aucun interrupteur; n'utilisez pas le téléphone se trouvant dans le bâtiment.
 - Quittez immédiatement le bâtiment.
 - Appelez immédiatement votre fournisseur de gaz depuis un téléphone extérieur. Suivez les instructions du fournisseur.
 - Si vous ne pouvez pas rejoindre le fournisseur, appelez le service incendie.
- C) N'utilisez pas cet appareil s'il a été plongé dans l'eau, même partiellement. Faites inspecter l'appareil par un technicien qualifié et remplacez tout élément du système de contrôle ou de commande qui a été plongé dans l'eau.

CAUTION: Hot while in operation. Do not touch. Severe burns may result. Due to high surface temperatures keep children, clothing and furniture, gasoline and other liquids having flammable vapors away. Keep burner and control compartment clean. See installation and operating instructions accompanying appliance.

ATTENTION : Surfaces chaudes lorsque l'appareil est en marche. Ne pas toucher. Risque de brûlures graves. En raison des températures élevées, les enfants, les vêtements et le mobilier, le carburant et tout autre liquide aux vapeurs inflammables doivent être tenus éloignés de l'appareil. Nettoyer régulièrement le brûleur et le compartiment des commandes. Voir les consignes d'installation et d'utilisation fournies avec l'appareil.

OPERATING INSTRUCTIONS / CONSIGNES DE FONCTIONNEMENT

- 1) **STOP!** Read the safety information above on this label.
 - 2) Ensure the Main switch is in the ON position and/or the wall mounted battery holder (if equipped) is in the <REMOTE> position.
 - 3) Press and release the ON/OFF button on the remote handheld transmitter. An audible beep should be heard from the receiver. If not using the remote, the unit can also be turned on by sliding the battery holder switch to the <ON> position (if equipped).
 - 4) After approximately 4 seconds the spark ignition system will spark for 60 seconds to light the main burner.
 - 5) The unit will turn on.
Note: The first attempt to ignition will last approximately 60 seconds. If there is no flame ignition (rectification) the board will stop sparking for approximately 35 seconds. After this wait time, the board will start a second try for ignition by sparking for approximately 60 seconds. If there is still no positive ignition after the second attempt the board will go into lock out.
The system will need to be reset as follows (after going into lock out mode):
 - a) Wait 5 minutes - turn the system off by pressing the ON/OFF button on the remote.
 - b) After approximately 2 seconds press the ON/OFF button again.
 - c) Unit will repeat step 2.
 - 6) If the appliance will not operate, follow the instructions, "To Turn Off Gas to Appliance" and call your service technician or gas supplier. This appliance is equipped with an on-demand pilot that shuts off after seven days.
- 1) **STOP!** Lisez les instructions de sécurité sur la portion supérieure de cette étiquette.
 - 2) S'assurer que le commutateur principal est en position ON et/ou que le bloc-piles mural (le cas échéant) est en position <REMOTE>.
 - 3) Appuyer sur la touche ON/OFF de la télécommande puis relâcher. Un bip sonore retentira depuis le récepteur. Si vous n'utilisez pas la télécommande, l'appareil peut également être allumé en faisant glisser le commutateur du bloc-piles sur la position <ON> (le cas échéant).
 - 4) Après environ 4 secondes, le système d'allumage produira une étincelle pendant 60 secondes pour allumer le brûleur principal.
 - 5) L'appareil s'allumera.
Remarque : Au premier allumage, le système tente d'allumer les flammes pendant 60 secondes. Si l'essai est infructueux, le système fera une pause de 35 secondes. C'est ce qu'on appelle l'étape de rectification. Ce délai écoulé, le système tente à nouveau d'allumer les flammes en produisant des étincelles pendant 60 secondes. Si les flammes ne s'allument toujours pas, le système se met en mode verrouillage.
Il faut alors le réinitialiser en suivant les étapes ci-dessous (pour le déverrouiller) :
 - a) Attendre 5 minutes et éteindre l'appareil en appuyant sur la touche ON/OFF de la télécommande.
 - b) Attendre 2 secondes et appuyer encore une fois sur la touche ON/OFF.
 - c) L'appareil répètera l'étape 2.
 - 6) Si l'appareil ne fonctionne pas, suivez les instructions "Pour couper le gaz au niveau de l'appareil" et appelez un technicien qualifié ou votre fournisseur de gaz.
Cet appareil est équipé d'une veilleuse sur demande qui s'éteint après sept jours.

TO TURN OFF GAS TO APPLIANCE / POUR COUPER LE GAZ AU NIVEAU DE L'APPAREIL

- 1) Press the ON/OFF button on the remote or slide the wall mount switch to the "OFF" position.
- 2) If service is to be performed—you must disconnect power and shut off gas to the unit.
- 1) Appuyer sur la touche ON/OFF de la télécommande ou faites glisser l'interrupteur mural sur la position "OFF".
- 2) Lors de l'entretien de l'appareil, vous devez débrancher l'alimentation électrique et couper le gaz alimentant l'appareil.

DO NOT REMOVE THIS INSTRUCTION PLATE

NE PAS ENLEVER CETTE ÉTIQUETTE D'INSTRUCTIONS

919-649b

installer's information

Gas Pressure Testing

During gas testing at pressures equal-to-or-less-than 1/2 psig. (3.45 kPa), the appliance's manual shut off valve must be closed to isolate it from the gas supply piping system.

Installation Into a Solid Fuel Burning Fireplace or Factory Built Fireplace

The Gi25LE gas insert was tested and approved for venting into any masonry or approved solid fuel burning factory-built fireplace that the insert fits into. Refer to "Minimum Fireplace Dimensions" section for minimum fireplace clearances.

If the factory built fireplace* height is too low for your Insert, you may remove the smoke baffle plate, damper, refractory (firebricks), glass doors, screen rails, screen mesh and log grates from the factory built fireplace. Save these items for reinstallation if the insert is removed. The fireplace flue damper can be fully blocked open or removed for installation of the gas fireplace insert.

Smoke shelves, shields, and baffles may be removed if attached by mechanical fasteners. Parts removed must not weaken the structural integrity of the factory-built fireplace.

The fireplace and chimney must be clean, in good working order, and constructed of non-combustible materials.

The surround panels should not seal ventilation openings on the fireplace.

Chimney cleanouts should fit properly.

NOTE Any alterations made to the listed solid fuel burning factory built fireplace may void the listing of the fireplace.

Cutting any sheet metal part of the fireplace in which the gas insert is to be installed is prohibited.

*Check with a local inspector before installation.

Installers must mechanically attach the supplied label to the inside of the firebox of the fireplace into which the gas fireplace insert is installed.

WARNING This fireplace has been converted for use with a gas fireplace insert only. It cannot be used for burning wood or solid fuels unless all original parts are replaced and the fireplace re-approved by the authority having jurisdiction."

Factory-Built (Metal) Wood-Burning Fireplace Requirements

NOTE Any parts that are removed must be removed in a way that would allow them to be reinstalled if the insert is ever removed (removal of rivets or screws is acceptable).

To reference parts—see illustration below.

Must be removed:

- 1 - Damper
- 2 - Grate (with log set)

May be removed (if applicable):

- 3 - Smoke shelf
- 4 - Internal baffles
- 5 - Screen
- 6 & 7 - Masonry lining or refractory
- 8 - Metal or glass doors

You must permanently mark the fireplace to indicate that it was altered and is no longer suitable for burning solid fuel (wood) unless the removed parts are reinstalled. Cutting any sheet metal parts is prohibited.

May be removed (in certain cases):

- 9 - Metal floor of the firebox
- 10 - The insulation and any structured rigid frame members must not be removed or altered (side and top of the door frame, side and top of the face of the fireplace, metal sides, etc.).

CAUTION Firebox floor removal is not covered under the appliance safety standard (ANSI Z21.88) used in the safety certification of this appliance. The Intertek safety certification does not apply to this method of installation. Before installing the appliance using this method, contact the Authority Having Jurisdiction to determine if this installation is acceptable in your area. The sheet metal base of the fireplace must be left in place and a minimum 1/2" cement board sheet placed under the entire length and width of the appliance.

If the factory-built fireplace has no gas access hole(s), one that is 1-1/2" (37-1/2 mm) or less may be drilled through the lower sides or bottom of the firebox. This access hole must be plugged with non-combustible insulation after the gas supply line is installed.

General Safety Information

1. The appliance installation must conform with local codes, or in the absence of local codes, with CSA B149.1 (in Canada) or the National Fuel Gas Code ANSI Z223.1 in the USA. This appliance should be installed by a qualified gas fitter technician only.
2. Installation and repair should be done by a qualified service person.
3. The appliance should be inspected before use and at least annually by a professional service person. More frequent cleaning may be required due to lint from carpeting, bedding material, animal hair, etc. It is imperative that you keep control compartments, burners, and circulating air passageways of the appliance clean.
4. See general construction and assembly instructions. Install this appliance in a vented, non-combustible fireplace only.
5. This appliance is listed for bedroom installations when used with a listed Millivolt thermostat. Some areas may have further requirements; check local codes before installation.
6. Always vent this insert to the outside of the building envelope - never vent to another room or inside a building. Make sure that the vent is properly sized and of adequate height to provide the proper draft.
7. Inspect the venting system annually for blockages and any signs of deterioration.
8. Any glass removed for servicing must be replaced prior to operating the appliance.
9. To prevent injury, do not allow anyone unfamiliar with its operation to use the fireplace.
10. This appliance can be operated without brick or enamel panels.
11. Due to high temperatures, the appliance should be located out of high traffic areas and away from furniture and draperies. Children and adults should be alerted to the hazards of high surface temperatures, especially the fireplace glass and gold trims, and should stay away to avoid burns or clothing ignition. Young children should be carefully supervised while in the same room as the appliance. Clothing or other flammable material should not be placed on or near the appliance.
12. Be aware of hot wall & mantle surfaces. Although safe, the wall & mantle directly above the fireplace can get very hot when the fireplace heats. Do not touch!
13. Be aware of hot surfaces in front of the fireplace glass. Although safe and depending of its elevation, flooring directly in front of the fireplace can get very hot when the fireplace heats.
14. Solid wood flooring in front of the fireplace (if allowed) may shrink during the heating season due to heat.

WARNING Failure to position the parts in accordance with the diagrams in this manual or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

Installation Checklist

Before installing the vent system, ensure that the damper plate is open and secure to prevent it from falling and crushing the liner.

The Regency gas insert is installed as listed.

1. Check all clearances to combustibles. Refer to sections "Minimum Fireplace Dimensions" and "Minimum Clearances to Combustibles".
2. Make the gas connection. Refer to section "Gas Connection".
3. Install the two liners (3" intake and 3" exhaust) to the sliding connector plate. Refer to section "Flue Collar Installation/Removal".
4. Slide the unit halfway into the fireplace.
5. Pull the vent connector plate through the tapered brackets and fasten it to the front plate. Refer to section "Flue Collar Installation/Removal".
6. Slide the unit fully into the fireplace. Level if necessary.
7. Test gas pressure. Refer to section "Gas Pipe Pressure Testing". Check aeration system. Refer to section "Air Shutter Adjustment".
8. Install standard and optional features. Refer to the following sections:
 - a. Panel Installation
 - b. Log Set Installation
 - c. Faceplate Installation
 - d. Minimum Clearances to Combustibles
 - e. Minimum Fireplace Opening Sizes with Varying Faceplate/Backing Plate Options
9. Final check: Before leaving this unit with the customer, the installer must ensure that the appliance is firing correctly. This includes:
 - a) Clocking the appliance to ensure the correct firing rate.
 - b) Adjusting the primary air, if required, to ensure that the flame does not carbon. See "Gas Insert Aeration System" section.
 - c) Ensuring that the appliance is venting correctly.

Materials Required

A 120-Volt AC power cord is hooked up to the fan. Plug the three-wire cord into a suitable receptacle. Do not cut the ground terminal off under any circumstances. The appliance must be electrically grounded in accordance with local codes, the current version of CSA C22.1 (in Canada), or in the absence of local codes, with the National Electrical Code ANSI/NFPA 70-1987.

Minimum Fireplace Dimensions

The minimum fireplace clearances & dimensions for the Regency gas insert are shown in the following diagram:

NOTE Also, see minimum fireplace opening sizes with varying faceplate, finishing trim, and backing plate options on the next page.

A Height	B Max. Lintel Bar Depth	C Depth	D Damper Opening	E Front Depth to Taper	F Width (rear)	G Width (front)
17" (432 mm)	10-1/2" (267 mm)	15" (381 mm)	8" x 4" min. (203 mm x 102 mm)	1-5/8" (42 mm)	15" (381 mm)	25" (635 mm)

Electrical Receptacle in a Masonry Fireplace

The electrical receptacle can be placed on the left or right side of the unit within the masonry enclosure, respecting the following conditions:

1. Distance from the receptacle face to the gas insert: minimum 3" (76 mm)
2. Place the receptacle as far back as possible, so that it is near the back of the gas insert when installed.
3. Height from the top of the receptacle to the floor of the masonry fireplace: maximum 3.5" (89 mm)
4. The receptacle box and receptacle cover must be made of metal.
5. Where the 120-volt fan assembly power cord exits toward the receptacle, it must not come into contact with the back or sides of the gas insert. It can only touch the faceplate.

When installed, this appliance must be grounded in accordance with local codes, or in their absence, the National Electrical Code ANSI/NFPA 70, or the Canadian Electrical code CSA C22.1.

IMPORTANT

Check with your local inspector before starting this installation, as some jurisdictions may not allow placement of this receptacle within a masonry chimney.

installer's information

Hardwire Kit Installation

IMPORTANT

- Electrical power must be brought to the appliance by a licensed electrician.
- This kit must be installed in accordance with local electrical codes. Consult your local building official for any requirements that must be met in your area.
- Make sure the electrical lead leading to the insert has been disabled prior to installing this kit.

The 946-854 Hardwire Kit contains the following:

	Part #	Description	Qty
1	911-434	Armored Cable - 12/2 AC90 10ft (3m)	1
2	905-114	Adapter Right Angle Zinc 3/8"	1
3	904-687	Connector Clamp 3/8 CI-804	1
4	911-432	Wire Harness Gas Hardwire Kit	1
5	166-451F	Hardwire Plate*	1
6	910-199	Clip Wire Holder	1
7	911-252	Twist-On Wire Connector	3
8	911-249	Anti Short Bushing #0 Red	2
9	904-553	Screw #8 x 1/2 Type B Black Oxide*	2
10	904-187	Cable Tie Black (CV100W)	1
11	920-833	Instruction Sheet	1

* Only required for Gi25LE/Gi27LE/Gi29LE/Gi33LE Models.

Shut off the gas and disconnect electrical supply to the unit before beginning.

Remove safety screen and glass front. See manual.

1b. Remove the left side cover (loosen the top two screws and lift up and out).

Diagram 1

2. Remove the screw that secures the IFC and pull IFC out to access the main power harness.

Diagram 2

Pull the IFC out.

Diagram 3

installer's information

3. Unplug the main power harness (X1) at the PF11 IFC Control Board and disconnect the ground wire from the ground stud.

4. Remove the 3-prong plug and harness from the side cover and discard.
5. Install the new wire harness provided (Part #911-432) back into X1 at the PF11 IFC Control Board and route it through the grommet.

6. Connect the ground wire of the new harness back onto the ground stud.
7. Add the red anti short bushings to either end of the armored cable. See below.

8. Install armored cable & right angled adaptor onto bracket.

9. Install bracket onto side cover. Two holes may have to be drilled using a 1/8" bit prior to install, using the bracket as a template.

10. Lock the right hand connector using the supplied locking/connector clamp.

11. Connect the main harness wires (X1) to the armored cable using the 3 twist-on wire connectors provided. Make the connections according to color; neutral (white), live (black) and ground wires (green & bare copper) between the main harness (X1) and the armored cable.

installer's information

12. Tuck wires neatly into the unit using the cable ties and clip wire holder and re-install the side cover.

13. The gas insert should be placed on the fireplace hearth in position to access the left/right side of the insert depending on model.
14. Route the conduit on the wiring harness through the fireplace to a junction box outside of the fireplace.
NOTE: Leave extra slack in the conduit to allow for servicing of the gas insert. When placing the gas insert into place, route the conduit away from the insert to prevent it from contacting or being pinched by the insert.
15. Install gas liner and optional accessories to complete the installation.

NOTE: Shown with armored cable on the right side. Depending on model: may be on left side.

Minimum Fireplace Opening Sizes with Varying Faceplate/Backing Plate Options

Faceplate	Dimensions				
	Minimum Install Width (A)	Minimum Install Height (B)	Minimum Install Depth (C)	Minimum Rear Width (D)	Taper Depth (E)
3-Sided Regular Faceplate	25" (635 mm)	17" (432 mm)	15" (381 mm)	15" (381 mm)	1-5/8" (42 mm)
3-Sided Regular Faceplate w/ 3-Sided Backing Plate	26-3/4" (680 mm)	18-1/4" (464 mm)	15" (381 mm)	15" (381 mm)	3-1/8" (80 mm)
3-Sided Flush Faceplate	26-1/2" (673 mm)	18" (457 mm)	16-1/4" (413 mm)	15" (381 mm)	2-5/8" (67 mm)
3-Sided Flush Faceplate w/ 3-Sided Backing Plate	26-3/4" (680mm)	18-1/8" (461mm)	16-1/8" (410mm)	15" (381mm)	4" (102mm)
4-Sided Flush Faceplate	26-1/2" (673mm)	18-1/8" (461mm)	16-1/4" (413mm)	15" (381mm)	2-5/8" (67mm)
3-Sided Finishing Trim	26-1/2" (673mm)	18" (457mm)	16-1/4" (413mm)	15" (381mm)	2-5/8" (67mm)
3-Sided Finishing Trim w/ 3-Sided Backing Plate	26-3/4" (680mm)	18-1/4" (464mm)	16-1/8" (410mm)	15" (381mm)	4-1/4" (108mm)
4-Sided Finishing Trim	26-1/2" (673mm)	18-1/8" (461mm)	16-1/4" (413mm)	15" (381mm)	2-5/8" (67mm)

installation

Minimum Clearances to Combustibles

The clearances listed below are minimum distances unless otherwise stated.

A major cause of fires is failure to maintain required clearances (airspace) to combustible materials. It is of the greatest importance that this decorative gas appliance is installed only in accordance with these instructions.

Diagram 1

Clearance	Dimension	Measured From:
A: Sidewall	8" / 203 mm	***From inside edge of faceplate / doors
B: Ceiling	60" / 1524 mm	From base of unit
C: Min. Alcove Width	54" / 1372 mm	From side wall to side wall
D: Max. Alcove Depth	36" / 914 mm	From the front of the unit.

NOTES A hearth is recommend but not required in front of this appliance. If bringing combustible flooring up to the appliance it must be at the same level or lower than the appliance base. No combustible material is permitted underneath the appliance.

NOTES

- **For mantle clearances, see next page.
- (E): ***Measured from the inside edge of the faceplate/doors - reference only: 19-9/16" (497 mm)

Mantel Clearances Without Mantel Deflector

Diagram 2

A	12" (305 mm)
B	17" (432 mm)
C	1-1/2" (38 mm)

D	13" (330 mm)
E	Non Combustible Materials
F	16-5/8" (422 mm) to base of unit

Mantel Clearances with 2-1/4" (57 mm) Mantel Deflector

Diagram 3

A	12" (305 mm)
B	15" (381 mm)
C	1-1/2" (38 mm)

D	10" (254 mm)
E	Non Combustible Materials
F	16-5/8" (422 mm) to base of unit

WARNING

Although this appliance passes safety certification, the hearth in front of the fireplace becomes very hot when the fireplace heats. Do not use the hearth as a seat or shelf.

NOTES

- A 2-1/4" (57 mm) mantel deflector reduces mantel height to 10" (254 mm) from the top of the fireplace opening at 1-1/2" (38 mm) depth.
- A non-combustible mantel may be installed at a lower height if the framing is made of metal studs covered with a non-combustible board. The non-combustible mantel, when installed at a lower overall height, may not be lower than 6" (152 mm) from the top of the fireplace opening.
- All material used must be non-combustible.

installation

Using Steel Studs and Concrete Board Over Masonry Brick Fireplace

The masonry front brick facing can be removed and replaced with non-combustible materials such as steel studs and concrete board/dura rock/micor board as per diagram 1, only if safe to do so. Steel stud may also be placed in front of the masonry brick if left in place. This is the preferred method depending on the condition of the masonry brick fireplace.

The opening between the front of the masonry firebox and non-combustible materials such as steel studs must be sealed so heat cannot run between the face of the masonry fireplace and the refacing materials. Only finishing materials such as tile, stone, brick, or similar materials that are non-combustible may be used. Use materials that are uniform so that when the unit is positioned, there are no visible gaps on the sides or top of the surround.

DIMENSIONS	
A - Horizontal clearance	6" (152 mm)
B - Vertical clearance	20" (508 mm)
C - Opening Width	26" (660 mm)
D - Opening Height	17-3/4" (451 mm)

F - Minimum Total Height	37-3/4" (959 mm)

- Combustible Facing Over Combustible Framing 
- Non-Combustible Facing Over Non-Combustible Framing 

Leveling Legs Adjustment

NOTE The leveling of the appliance must be done prior to hooking up gas line and vent system.

1. The leveling bolts can be installed with bolts from above or below (preferred method) to level the appliance. If choosing to go above, follow steps below. If choosing to go from below, see step 5. From the back of the unit, remove the six screws, then lift the fan mount plate out.

2. Screw the 2 2-1/2" (64 mm) bolts supplied inside manual package to the 2 nutserts located at the rear corners of appliance. Using a 7/16" wrench or socket, tighten or loosen the bolts as needed. The rear bolts can be adjusted up to 2-1/8".
3. Reinstall the fan mount plate.

4. The front leveling bolts can be accessed from the front of the insert, on the bottom left and right sides. Once it is in position, adjust the bolts to ensure the appliance is level and won't rock.

5. From below: The bolts can be flipped around and installed from the bottom of the insert for extended length. Once it is in position, adjust the bolts to ensure the appliance is level and won't rock.

installation

Gas Connection

WARNING

Only people licensed to work with gas piping may make the gas connections to this appliance.

1. If the appliance is installed into an existing chimney system, thoroughly clean the masonry or factory-built fireplace.
2. The appliance has an opening on the left side of the control compartment. A 3/8" NPT gas supply pipe must be brought near the opening.
3. Locate the centre point where the vent will pass through the chimney, above the appliance. Move the appliance to the installation location. Ensure that the insert is level.
4. Do not cut any sheet metal parts of the fireplace into which the gas insert will be installed.
5. If the factory-built fireplace has no gas access hole(s), drill one of 1-1/2" (37-1/2 mm) or less through the lower sides or bottom of the firebox. The access hole must be plugged with non-combustible insulation after the gas supply line is installed.

IMPORTANT

This appliance was tested and certified as a complete system with the noted termination caps and flex liner. Only the listed termination caps/flex liner noted below can be used. Use of termination caps or flex liners not listed in this manual will void the warranty and certification of this appliance. It is also important not to enclose the termination cap inside a masonry chimney rain cap, or similar.

There is an exception as the 946-529 Co-linear DV Vertical Termination Cap may be enclosed inside of a masonry chimney rain cap as long as it meets the requirement. See full details in this instruction manual.

NOTES

When attaching the two 3 inch (76 mm) liners to the termination cap and prior to sliding them down the chimney, it is good practice to mark the liners "exhaust" & "air intake". This prevents mixing up the liners at the flue collar connection of the appliance. If facing the appliance from the front, the air intake is located on the left and the exhaust flue on the right.

Vertical Venting

THE APPLIANCE MUST NOT BE CONNECTED TO A CHIMNEY FLUE SERVING A SEPARATE SOLID FUEL BURNING APPLIANCE.

INSTALLATION WITH 3" X 3" LINERS

This appliance is designed to attach to two 3" (76 mm) co-linear aluminum flex running the full length of the chimney. The flue length must be a minimum of 10' (3.05 m) and a maximum of 35' (10.7 m) long. See the chart below for minimum distances from the roof. Periodically check that the vent is unrestricted.

Masonry chimneys may take various contours which the flexible liner will accommodate. However, **keep the flexible liner as straight as possible** (avoid unnecessary bending).

Attach both the exhaust and intake flue liners to both the termination cap & flue collar at the appliance with a minimum of three self-tapping screws. Use Mil-Pac sealant to seal the pipes.

The air intake pipe must be attached to the inlet air collar of the termination cap.

Gas & Electrical Connections

Venting

INSTALLATION WITH 3" & 3" LINERS

Part #	Description
948-305	3" Flex - 35 ft. (intake & exhaust)
946-529	Regency Co-linear DV Vertical Termination Cap & Flashing

Vent Run	Vent Restrictor Position	Burner Aeration Setting
10' to 15'	NG 3" Open LP 3-1/2" Open	NG 1/4" LP 5/8"
15' to 25'	NG 3-1/2" Open LP 5" Open	NG 1/4" LP 5/8"
25' to 35'	NG 2-1/2" Open LP 4" Open	NG 1/4" LP 5/8"

NOTE: See instructions in the "Vent Restrictor Position" section on positioning of the vent restrictor.

The Gi25LE is also approved for use with a 2" liner for air intake and a 3" liner for exhaust. This would be suitable for a Class A wood burning chimney with a minimum 6" round flue.

The chimney must be lined with one 2" diameter liner for intake and one 3" diameter liner for exhaust. The minimum vent length is 10' (3.05 m) and maximum is 35' (10.7 m).

INSTALLATION WITH 3" & 2" LINERS

Part #	Description
948-305	3" Flex - 35 ft. (exhaust)
948-316	2" Flex - 35 ft. (intake)
946-582	Regency Co-linear DV Vertical Termination Cap, Flashing & 2" Collar

Vent Run	Vent Restrictor Position	Burner Aeration Setting
10' to 15'	NG 4" Open LP 5" Open	NG 1/4" LP 5/8"
15' to 35'	6" Open LP 6" Open	NG 1/4" LP 5/8"

NOTE: See instructions in the "Vent Restrictor Position" section on positioning of the vent restrictor.

Alternative Approved Venting Components*

- 46DVA-VCH High Wind Cap
- 46DVA-GK 3" Co-linear Adaptor with flashing

Note: Both Air Inlet/Exhaust Liners would need to be purchased separately as they are not included. Simpson Dura-Vent pipe lengths can be added if required to meet clearance requirements.

or

- 46DVA-CL33 Co-Linear Kit w/Flex

Note : The 46DVA-CL33 includes high wind cap, flashing & 35 foot liners for both exhaust/intake.

In areas of consistently high winds, we recommend using the Simpson Dura-Vent System 46DVA-GK adapter and 46DVA-VCH high-wind cap or 46DVA-CL33 Co-Linear Kit w/Flex.

The Air Intake pipe must be attached to the inlet air collar of the termination cap.

***NOTE:** Simpson Duravent can only be used with 3" liners.

installation

Converting From 3" & 3" Venting To 3" & 2"

1. Remove the top plate from the unit by undoing the screw at the front of the firebox and slide out towards the back of the unit.
3. Secure the 2" collar to the top plate using 4 screws in place of the 3" collar.

2. Remove the 3" collar from the top plate by undoing the 4 screws.

NOTE: The screws are secured from the underside of the top plate.

4. Re-install the top plate to the unit.

Restrictor Adjustment

Tools needed

- Phillips screwdriver

1. Gently lift the screen assembly up and out. Refer to the Screen Removal section.
2. Remove the glass door. Refer to the Glass Door Removal section.
3. Refer to the vent chart to determine the restrictor setting.
4. Locate the restrictor plates and screws.
5. Use a Phillips screwdriver to loosen or remove the four screws.
6. Adjust the restrictors according to the vent chart in this manual. The notches above the holes in the baffle will match the notches on the restrictor plate.
7. Tighten the screws. Setting 1 requires one screw for each restrictor.

	Opening size
Setting 1	6" (152 mm)
Setting 2	5" (127 mm)
Setting 3	4" (102 mm)
Setting 4	3-1/2" (89 mm)
Setting 5	3" (76 mm)
Setting 6	2-1/2" (64 mm)

Setting 1

*Remove Restrictor Plates completely

Setting 4

installation

Vertical Venting/Restrictor Settings for FPI Co-Linear DV Vertical Termination Cap & Flashing (946-529)

Vertical Venting/Restrictor Settings for FPI Co-Linear DV Vertical Termination Cap & Flashing (946-529) Enclosed

IMPORTANT:

Vent cap clearances to Sides and Top must be followed.
See next page for important clearance requirements when termination cap is enclosed above and on 2 sides.

installation

Vertical Venting/Clearance Requirements for FPI Co-Linear DV Vertical Termination Cap & Flashing (946-529) Enclosed

When installed with 46DVA-CL33 or 46DVA-GK + 46DVA-VCH + 3" FPI Flex (Exhaust/Air Intake), the clearances below do not apply, all noted caps must be free and clear of obstructions on all sides.

Situation 1

Situation 3

Situation 2

Situation 4

Note: Restrictor must be set to 5" (127 mm) open, see Restrictor Adjustment.

Vertical Venting/Restrictor Settings for Simpson Dura-Vent Termination Caps

When installed with:
 46DVA-CL33 or
 46DVA-GK + 46DVA-VCH + 3" FPI Flex (Exhaust/Air Intake)

installation

Flue Collar Installation/Removal

1. Detach the flue collar from the unit by removing the screws and sliding the plate backward.

2. Attach the exhaust and intake flue liners to the flue collar with a minimum of three self-tapping screws. Use Mill-Pac sealant to seal pipes.

3. Pull the flue collar through the cutout in the top of the insert using the flue collar tool provided. See diagram 2.

4. The tabs on the insert will seal the flue collar against the intake inlet and exhaust outlet. Secure with the two screws removed in step 1.

5. Tighten the two Phillips screws to secure the collar.

NOTE

Ensure the draft hood is properly secured and screws tight to create proper seal.

Air Shutter Adjustment

The burner aeration is factory set, but may need adjustment due to altitude or the local gas supply.

Air shutters increase or decrease the amount of air mixed with fuel, affecting combustion and how the flame looks. Low primary air will create a taller, yellower flame, and higher primary air a lower, bluer flame.

Air shutter adjustment is not just for appearance - not enough primary air may lead to carboning, sooting, or a flame that reaches the top of the firebox. Units that are installed at higher elevations, or run on high most of the time may need more primary air.

- Pull in to close air shutter
- + Pull out to open the air shutter

Unit	Fuel Type	Min. Air Shutter Setting*
Gi25LE	NG	1/4" (6.35 mm)
Gi25LE	LP	5/8" (16 mm) Full Open

*At higher elevations, air shutter settings may have to be opened more to compensate.

CAUTION

- ***Carbon will be produced if the air shutter is closed too much.**
- **Aeration adjustment should only be performed by an authorized Regency installer at the time of installation or service.**
- **Any damage due to carboning resulting from improperly setting the aeration controls is NOT covered under warranty.**

installation

NG System Data

Min. Supply Pressure	5" WC (1.25kPa)
Low Setting Man. Pressure	1.6" WC (0.39 kPa)
Max. Manifold Pressure	3.5" WC (0.87 kPa)
Factory equipped for altitude 0-4500 ft. (0-1370 m)	
Orifice Size	#44 DMS
Minimum Input	14,500 Btu/h (4.25 kW)
Maximum Input	20,500 Btu/h (6.00 kW)

LP System Data

Factory equipped for altitude 0-4,000 ft. (0-1,370 m)	
Min. Supply Pressure	11" WC (2.74 kPa)
Low Setting Man. Pressure	6.4" WC (0.39 kPa)
Max. Manifold Pressure	10" WC (2.49 kPa)
Orifice Size	#55 DMS
Maximum Input	20,500 Btu/h (6.00 kW)
Minimum Input	17,000 Btu/h (4.98 kW)

High Elevation

This unit is approved for altitudes 0 ft. to 4,500 ft.

Gas Line Installation

Some municipalities have local codes for gas line installation. Consult with your local authorities and the CSA B149 installation code.

For USA installations, follow local codes and the current National Fuel Gas Code, ANSI Z223.1.

When installing copper or flex connectors, use approved fittings only. Flare nuts for copper lines and flex connectors usually meet this requirement. Provide a union for easy disconnection of gas lines when servicing.

When an appliance is installed at elevations above the maximum elevation option provided, the input rate shall be reduced or air shutter opened further. For altitudes above 4500ft. the input rate shall be reduced at the rate of 4% for each additional 1000 ft (300 m). The input rate shall be reduced from the rate indicated for the highest altitude option provided.

This is to accurately adjust the input ratings of appliances certified for high altitude to ensure proper performance. The rated output of gas-burning appliances decreases with higher altitudes due to the reduction in atmospheric pressure. At higher elevations, and as an alternative, air shutter settings may have to be opened more to compensate for the lack of air.

NOTE A shutoff/Dante valve should be supplied in or near the unit (or as per local codes) for ease of servicing this appliance.

IMPORTANT Always check for gas leaks with a soap and water solution or gas leak detector. Do not use open flame for leak testing.

Pilot Adjustment

Periodically check the pilot flames. **Correct flame pattern has two strong blue flames: 1 flowing around the flame sensor and 1 flowing across the burner (it does not have to be touching the burner).**

Note: If you have an incorrect flame pattern, contact your Regency® dealer for further instructions.

Incorrect flame pattern will have small, probably yellow flames, not coming into proper contact with the rear burner or flame sensor.

Gas Pipe Pressure Testing

It is necessary to isolate the unit from the gas supply piping system prior to gas pipe pressure testing. Close the unit's manual shutoff valve during testing at pressures equal to or less than 1/2 psig. (3.45 kPa). Disconnect the piping from the valve at pressures over 1/2 psig.

The manifold pressure is controlled by a regulator built into the gas control and should be checked at the pressure test point.

NOTE To properly check gas pressure, both inlet and manifold pressures should be checked using the valve pressure ports on the valve.

1. Make sure the unit is in the "OFF" position.
2. Loosen the "IN" or "OUT" pressure tap(s), turning counterclockwise with a 1/8" wide flat screwdriver.
3. Attach manometer to "IN" or "OUT" pressure tap(s) using a 5/16" ID hose.
4. Turn the unit on using the remote or wall switch.
5. Do the pressure check with the unit burning. The setting should be within the limits specified on the safety label.
6. When finished reading the manometer, turn off the unit, disconnect the hose, and tighten the screw clockwise with a 1/8" flat screwdriver.

NOTE The screw should be snug, but do not over-tighten.

7. Main Gas Inlet

Conversion from Natural Gas to Propane

**THIS CONVERSION MUST BE DONE BY A QUALIFIED GAS FITTER
IF IN DOUBT DO NOT DO THIS CONVERSION !!**

WARNING

This conversion kit shall be installed by a qualified service agency in accordance with the manufacturer's instructions and all applicable codes and requirements of the authority having jurisdiction. If these instructions are not followed exactly, a fire, explosion, or carbon monoxide may result, causing property damage, personal injury, or loss of life. The qualified service agency is responsible for the proper installation of this kit. The installation is not proper and complete until the operation of the converted appliance is checked.

Conversion Kit #262-969 includes:

1	904-977	Burner Orifice #55
1	910-037	Pilot Orifice #30
1	918-590	Decal - Conversion to LP
1	904-529	5/32" long Allen Key
1	908-528	Label Propane Red
1	911-011	Stepper Motor
1	920-875	LP Conversion Instructions

1. Turn the unit off and allow it to cool to room temperature.
2. Unplug or disconnect the stove power source.
3. Remove the safety screen and glass front (see manual).
4. Remove the left (#5), right (#4) and pilot (#2) logs.
5. Remove the left and right side panels, then the ember log (#3).

6. Loosen the 2 screws securing the burner to the mount. Remove the 1 screw securing the aeration cap and lift the burner out from the unit.

7. Remove the rear log and rear panel (if installed).
8. Loosen the 2 screws securing the pilot assembly then remove the pilot hood by sliding it off.

9. Pull off the pilot cap to expose the pilot orifice.

10. Unscrew the NG pilot orifice with the Allen key (5/32") and replace with the LP (#30) pilot orifice in the kit and replace pilot cap.

11. Remove the burner orifice with a 3/8" wrench and replace it with the #55 orifice in the kit. Use another wrench to support behind the elbow when removing/replacing the burner orifice.

12. Remove the wire management cover (secured by 2 screws). Remove the wire management straps to access the cables.

13. Remove the screw securing the IFC tray and then slid it out to access the motor cable.

14. Disconnect the cable coming from the pressure regulator motor at the IFC board (marked X6 on the IFC).

installation

15. Remove regulator from gas valve and discard 2 Pressure regulator screws A (T20 or slot), Pressure Regulator B, Spring and Diaphragm C. Ensure the rubber gasket, which is prefitted as part of the new regulator, is properly positioned. Install the new Pressure Regulator using the 2x M4 x .7 screws supplied. Tighten the screws to 25lb-in. In the event that the screw threads are cross threaded or stripped, replace the valve assembly. Also reconnect new cable from pressure regulator motor disconnected in step 14.

16. Reverse steps 13 to 2.
17. Attach the "This unit has been converted to LPG" label near or on top of the serial decal.
18. Replace the yellow "Natural Gas" label with the red "LPG" label.
19. Adjust the aeration settings - see the "Air Shutter Adjustment" section in the manual.
20. Start the appliance (see the "Lighting Instructions" section in the manual). Ensure that pilot and burner ignition are completed without delay. Check your inlet and outlet pressures at full load. With a soapy solution, leak test the entire system. Verify correct flame and pilot appearance.

Log Set & Optional Brick Panel Installation

NOTE This instruction sheet will be for all the brick panel and log set options.

IMPORTANT Read the instructions below carefully and refer to the images. If the logs are broken, do not use the unit until they are replaced. Improper positioning of the logs and may create carbon build-up and can alter the unit's performance. Issues caused by improper log positioning are not covered under warranty.

This log set includes:

1	Rear Log
2	Pilot Log
3	Ember Log
4	Right Log
5	Left Log

This optional brick panel set includes:

1	Rear Brick
2	Left Brick
3	Right Brick

NOTE Brick Panel Set is optional. The log set can be installed without a brick panel set.

1. Carefully remove the logs from the box and unwrap them. The logs are fragile - handle with care, and do not force them into position.

installation

- 2a. Using a Phillips head screwdriver, remove screws securing burner to the mount. See diagram 1.
- 2b. Remove the screw securing the aeration cap and lift burner from the unit. See diagram 2.

3. Install the rear log #1 and rear brick panel as shown. The rear brick panel is not required as this is optional. Only install the rear brick panel if the optional panel set is being installed.

NOTE: Optional step if Brick Panel Set is being installed.

4. Reinstall and secure both the burner and the aeration cap removed in step 2a & 2b. Do not overtighten the aeration cap screw when re-installing. Move the aeration handle to check that it still functions correctly.

5. Install Log #2, Pilot Log onto the top of the Pilot Shield.

6. Install Log #3, the Ember log into the front of the fireplace. Make sure that it is roughly centered.

7. Install the left and right panels (if optional brick panel set is being installed) by placing the front corner in the bottom and rotating the rear down.

NOTE: Shown with right brick panel in place.

NOTE: Optional step if optional Panel Set is being installed.

installation

8. Install Log #4, the Right Log onto the burner.

9. Install Log #5, the Left Log onto the burner.

10. Completed installation of log set.

NOTE: Shown without optional brick panels in place.

installation

Screen Removal

1. Gently lift screen assembly out.

2. Place screen assembly where it will not be scratched or broken.

Glass Door Removal

1. Locate and remove the four forward-facing Phillips head screws in the locations shown.

2. Lift glass door up and out.

3. Place glass door in a safe place where it will not be scratched or broken.

installation

Faceplate/Finishing Trim Installation

1. Remove the four screws supplied with the faceplate/finishing trim.
2. Position the faceplate/finishing trim. If installing a premium surround refer to "Premium Surround Installation".

3. Fasten the four screws on both sides to attach the faceplate/finishing trim.

4. Install the compact screen.

Backing Plate Installation

These instructions are for use with the following products:

Part #	Description
262-936	Backing Plate 3-Sided Oversized Black
262-937	Backing Plate Custom 3-Sided
262-938	Backing Plate Custom 4-Sided

1. Attach the brackets on both sides using four screws.

2. Position the backing plate.

3. Fasten four screws on both sides to attach the backing plate, ensuring they sit at the front of the slots.

4. Remove the four screws supplied with the faceplate/finishing trim.

5. Position the faceplate. If installing a premium surround, refer to "Premium Surround Installation".

6. Fasten the four screws on both sides to attach the faceplate.

7. Slightly loosen the screws shown below on both sides.

installation

8. Pull the backing plate as far forward as possible against the faceplate, then retighten the screws on both sides.

9. Install the compact screen.

10. Ensure the screen is centered with the faceplate by shifting the screen left or right.

Mantel Deflector Installation (Part #262-940)

1. Fasten the two screws provided from the back to attach the mantel deflector.

3. Install the compact screen.

2. Mantel deflector installed.

installation

Hearth Trim Installation - Trimming to Height (Part #262-941)

1. Remove the lower section of hearth trim by pulling evenly from both sides.

3. Slide the lower section back into the clips on the rear of the upper section.

2. If using a grinder (recommended): trim the lower section to height referring to the installation table for the amount to remove.

Installation Table	
Required install height	Height to cut off lower section
6" (Max)	None
5 1/2"	1/2"
5"	1"
4 1/2"	1 1/2"
4"	2"
3 1/2"	2 1/2"
3"	3"
2 1/2"	3 1/2"
2" (Min)	4"

- 2a. If using snips:
- Cut horizontally, referring to the installation table for the amount to remove.
 - Cut vertically along the corner to meet the previous cut.
 - Cut horizontally across the front face.
 - Repeat the process on the opposite side.

Hearth Trim Installation - Mounting Hearth Trim

1. Loosely attach the hearth trim using the slots in the unit's base and the included screw.

Note: Gi25 has 4 screws.

- 2b. With premium surround: slide the hearth trim as far back as possible (careful not to scratch it) and tighten the screws.

- 2a. Without premium surround: slide the hearth trim as far forward as possible (careful not to scratch it) and tighten the screws.

installation

Supplied Remote Control

Use the FPI remote control kit supplied with this unit. Use of other systems may void your warranty.

The remote control kit comes with a handheld transmitter.

Install three AAA alkaline batteries in the transmitter. Locate the ON/OFF switch located on the lower left hand side of appliance and turn switch to ON position - it is now ready for operation.

Final Check

Before leaving this unit with the customer, the installer must ensure that the appliance is firing correctly. This includes:

1. Locking the appliance to ensure the correct firing rate (noted on the label) at 15 minutes.
2. If required, adjusting the primary air to ensure that the flame does not carbon. Allow the unit to burn for 15 min. to stabilize.
3. Checking for proper draft.

CAUTION

Any alteration to the product that causes sooting or carboning resulting in damage to the exterior fascia is not the responsibility of the manufacturer.

Proflame II With Optional Wall Thermostat Instructions

Wall thermostat with flame on/off & no fan/no remote

1. Wire wall thermostat in series to ON/OFF switch and keep switch in "ON" position. See wiring diagram for details.
2. Press remote sync button once, 3 beeps will occur. Press remote sync button again, another 3 beeps will occur. Remote is now divorced and unit will go into CPI mode.

Fireplace will automatically go into CPI mode and unit can now be operated with wall thermostat. Flame adjustment, fan will not work in this configuration.

Wall thermostat with flame on/off & Manual fan

1. Sync remote back to system by pressing remote sync button once, 3 beeps will occur. Press the On/Off button on the remote within 10 seconds, remote now paired. Unit will go back into IPI mode.
2. On/Off switch at appliance must stay in "ON" position.
3. The fan will be operable via remote. Remote will not be able to turn unit on/off and adjust flame.

CAUTION

Do not connect the millivolt wall thermostat wires to the 120 V wires.

WIFI Dongle Installation

Atmosphere Gas Inserts

Caution: The gas supply shall be shut off to the appliance & 120 Volt AC power must be disconnected, before proceeding with the WIFI Kit Installation.

1. Remove safety screen and glass front. See manual.
2. From the front of the unit, remove the 2 screws, then lift the Wire Cover out. Loosen the ties that hold the wires underneath.

Diagram 1

3. Remove the screw that secures the IFC.

Diagram 2

Pull the IFC out.

Diagram 3

4. Locate the dongle connection (X0A). See diagram 4.

Diagram 4

5. Attach Velcro to the Wifi module as shown.

Diagram 5

installation

6. Push the IFC back in place.

7. Attach the dongle onto the bottom right area of the insert, beside the batteries. The wires can be tucked in with the others under the Wire Cover.

8. Reverse steps 3-1.

Note: Ensure when sliding the IFC tray back into position that the wires do not come into contact with the firebox base or fan/blower motor.

9. Gas supply can be turned back on & 120 Volt Ac power may be reconnected.

10. See QR code below or on box from this WIFI kit to install the Proflame app.

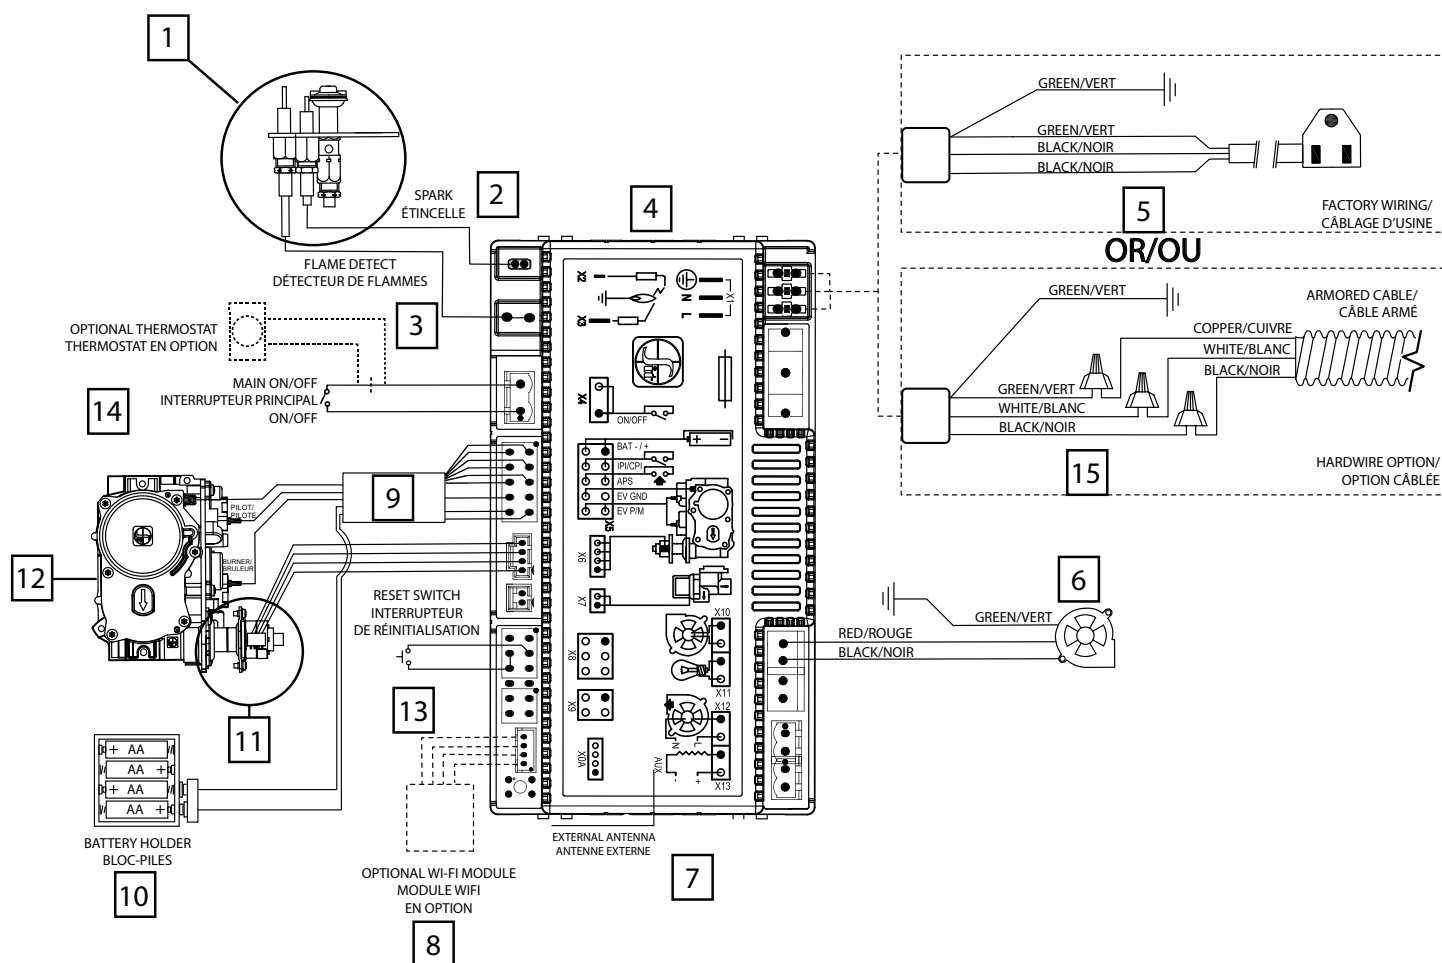

Wiring Diagram

This heater does not require a 120 V A.C. supply for operation. In case of a power failure, the burner switch and the remote control/thermostat will continue to operate. However, a 120 V A.C. power supply is needed for the fan/blower operation.

WARNING

- Ensure that the wires do not touch any hot surfaces and are away from sharp edges.
- **Electrical Grounding Instructions:**
This appliance is equipped with a three-prong (grounding) plug for your protection against shock hazard and should be plugged directly into a properly grounded three-prong receptacle. Do not cut or remove the grounding plug from this plug.

operating instructions

Operating Instructions

Before operating this appliance, proceed through the following checklist.

1. Read and understand these instructions before operating this appliance.
2. Check to see that all wiring is correct and enclosed to prevent possible shock.
3. Check to ensure there are no gas leaks.
4. Make sure the glass door is in place. Never operate the appliance with the door glass removed.
5. Verify that the venting and the cap is unobstructed.
6. Verify the placement of logs and other decorative media. If the pilot cannot be seen when lighting the unit, the logs/media are incorrectly positioned.
7. DO NOT turn the unit off and on without first waiting 60 seconds.
8. When lighting the appliance, the inside of the glass may fog. This will burn off after a few minutes of operation.

DO NOT BURN THE APPLIANCE WITH THE GLASS DOOR REMOVED.

On/Off Switch

The switch must be in the ON position (flipped to the right) for the remote to turn the unit on. Moving the switch to the left will turn the burner off.

NOTES

- This ON/OFF switch will be located on the lower left-hand side of the appliance as shown above.
- This ON/OFF switch overrides the remote functionality. Ensure switch is left in ON position when using the remote control.

Lighting Procedure

IMPORTANT

The remote control system supplied with this appliance has an ON/OFF key on the hand held transmitter. Prior to operating this appliance, please read the remote control operating instructions (packaged with remote control) to understand how to operate this remote control system.

1. Ensure the ON/OFF switch is flipped to the right. Press and release the ON/OFF button on the remote handheld transmitter. An audible beep should be heard from the receiver.
2. After approximately 4 seconds the spark ignition system will spark for 60 seconds to light the pilot.
3. The unit will turn on.

Shutdown Procedure

1. Press the ON/OFF button on the remote
2. If service is to be performed - you must disconnect power and shut off gas to the unit.

First Fire

The first fire in your stove is part of the paint curing process. To ensure that the paint is properly cured, it is recommended that you burn your fireplace for at least four (4) hours the first time you use it, with the fan on. The unit will release an odour caused by the curing of the paint and the burning of any oils remaining from manufacturing. Smoke detectors in the house may go off at this time. Open a few windows to ventilate the room for a couple of hours.

The glass panel may require cleaning after the unit has cooled down.

DO NOT ATTEMPT TO CLEAN THE GLASS WHILE IT IS HOT.

NOTE

When the glass is cold and the appliance is lit, condensation may fog the glass. This is normal and will disappear in a few minutes as the glass heats up.

DO NOT BURN THE APPLIANCE WITHOUT THE GLASS FRONT IN PLACE.

During the first few fires, a white film may develop on the glass front as part of the curing process. The glass should be cleaned or the film will bake on and become very difficult to remove. Use a non-abrasive cleaner and NEVER clean the glass while it is hot.

Automatic Convection Fan Operation

The fan operates automatically once turned on. Adjust the fan speed with the remote. The fan will turn on as the stove comes to operating temperature. After the unit is turned off and cooled to below a useful heat output range, the fan will shut off automatically.

Normal Operating Sounds of Gas Appliances

It is possible that you will hear some sounds from your gas appliance. This is due to the various gauges and types of steel used within your appliance. Some examples are listed below. All are **normal operating sounds** and should not be considered defects in your appliance.

Blower:

Regency® gas appliances use high-tech blowers to push heated air further into the room. It is not unusual for the fan to make a “whirring” sound when on. This sound will increase or decrease in volume depending on the speed setting of your fan speed control.

Burner Tray:

The burner tray is positioned under the burner tube(s) and logs, and is made of a different gauge material from the rest of the firebox and body. The varying thicknesses of steel will expand and contract at slightly different rates, causing ticking and cracking sounds. You should also be aware that as there are temperature changes within the unit, these sounds will likely recur.

Pilot Flame:

While the pilot is on, it may make a whisper sound.

Gas Control Valve:

As the gas control valve is turned on and off, it may make a dull clicking sound. This is normal operation of a gas regulator or valve.

Unit Body/Firebox:

Different types and thicknesses of steel will expand and contract at different rates resulting in some cracking and ticking sounds will be heard throughout the cycling process.

Maintenance Instructions

1. Always turn off the valve before cleaning. For relighting, refer to lighting instructions. Keep the burner and control compartment clean by brushing and vacuuming at least once a year. When cleaning the logs, use a soft clean paint brush as they are fragile.
2. Clean the glass (never when the unit is hot), appliance, and door with a damp cloth. Never use an abrasive cleaner.
3. The heater is finished in porcelain or with heat-resistant paint, and should only be refinished with heat-resistant paint (not with wall paint).

Never use an abrasive cleaner.

4. Check the burner's position and condition periodically, as well as the burner flame, making sure it is steady, not lifting or floating. If there is a problem, call a qualified service person.
5. The appliance and venting system must be inspected before use and at least annually by a qualified field service person, to ensure the unobstructed flow of combustion and ventilation air.

During the annual service call, the burner should be removed from the burner tray and cleaned. Replace the embers but do not block the pilot.

CAUTION

- **Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation.**
- **Any safety screen or guard removed for servicing an appliance must be replaced prior to operating the appliance.**
- **Clothing or other flammable material should not be placed on or near the appliance.**

CHILDREN AND ADULTS SHOULD BE ALERTED TO THE HAZARDS OF HIGH SURFACE TEMPERATURE AND SHOULD STAY AWAY TO AVOID BURNS OR CLOTHING IGNITION. YOUNG CHILDREN SHOULD BE CAREFULLY SUPERVISED WHEN THEY ARE IN THE SAME ROOM AS THE APPLIANCE.

**DO NOT USE THIS APPLIANCE
IF ANY PART HAS BEEN UNDER
WATER. IMMEDIATELY CALL A
QUALIFIED SERVICE TECHNI-
CIAN TO INSPECT THE APPLI-
ANCE AND REPLACE ANY PART
OF THE CONTROL SYSTEM AND
ANY GAS CONTROL WHICH HAS
BEEN UNDER WATER.**

6. Keep the area near the appliance clear and free from combustible materials, gasoline, and other flammable vapours and liquids.
7. Condensation may fog the glass when the appliance is lit. This is normal and will disappear as the glass heats up.

Never operate the appliance without the glass properly secured.

8. Periodically check the pilot flames. Correct flame pattern has two strong blue flames: one around the thermocouple, and one flowing across the rear of the burner (it does not have to be touching the burner).

NOTE

If you have an incorrect flame pattern, contact your Regency® dealer for further instructions.

Burner ○ ○ ○ ○ ○ ○ ○ ○ ○
 ○ ○ ○ ○ ○ ○ ○ ○ ○ ○ ○ ○ ○ ○ ○ ○ ○ ○

Top View of Pilot Flame

Incorrect flame pattern will have small, probably yellow flames, not coming into proper contact with the rear of the burner.

Top View of Pilot Flame

9. Verify operation after servicing.

maintenance

Door Glass

Your Regency insert is supplied with high-temperature Neoceram glass that will withstand the highest heat your unit can produce. If your glass requires cleaning, we recommend using an approved glass cleaner available at all authorized dealers. Do not use abrasive materials. Do not clean the glass when hot.

If you break the door glass, purchase a replacement from an authorized Regency dealer and follow our step-by-step instructions for replacement.

CAUTIONS

- **Do not clean when the glass is hot.**
- **The use of substitute glass will void all product warranties.**
- **Take care not to break the glass.**
- **Do not operate this fireplace without the glass front, or with broken glass.**
- **Wear gloves when removing damaged or broken glass.**
- **Replacement of the glass panel(s) should be done by a qualified service person.**

Glass Replacement

In the event that you break your glass, purchase your replacement from an authorized Regency® dealer.

Replacement ceramic glass (Part #940-559/P) is shipped with a gasket.

General Vent Maintenance

Conduct an inspection of the venting system semiannually. Areas to inspect are as follows:

1. Check the venting system for corrosion in areas exposed to the elements. Components with rust spots, streaks, or holes should be replaced immediately.
2. Remove the termination cap and shine a flashlight down the vent. Remove any bird nests or other foreign material.
3. Check for evidence of excessive condensation, such as water droplets in the inner liner dripping out the joints. Continuous condensation can cause corrosion of caps, pipes, and fittings. It may be caused by excessive lateral runs, too many elbows, or exposure to cold weather.
4. Inspect joints to verify that no pipe sections or fittings have been disturbed and consequently loosened. Also, check mechanical supports such as wall straps or plumber's tape for rigidity.

Log Replacement

Never use the unit with broken logs. Turn off the gas valve and allow the unit to cool before carefully removing the logs. Use the proper replacement log for any that are broken. Position the logs as shown in the diagram in the "Log Installation" section of this manual.

NOTE

- Improper positioning of logs may create carbon build-up and will alter the unit's performance which is not covered under warranty.

Glass Gasket

If the glass gasket requires replacement, use gasket (Part # 846-700).

Fan Replacement

NOTE

- To access the side and rear panels, disconnect the gas and venting (see the venting and flue installation sections in this manual for steps). You cannot access the blower from the front of the appliance.

1. Shut the power off.
2. From the back of the unit, remove the 5 screws, then lift the fan mount plate out.

3. Disconnect the fan wire harness through the rear panel. Disconnect 2 x 1/4" spade connectors to the fan terminals. Disconnect the ground lug to the fan using the screw provided.

4. Remove fan from unit by lifting up off pins.

5. Remove the fan from the mounting plate by removing 3 screws from the outside of the fan access panel.

6. Connect the red and black wire from the fan motor and green ground wire.
7. To install, reverse these steps.

maintenance

Valve Replacement

Before you begin:

- Shut off the gas supply to the unit.
- Disconnect all electrical supply to the unit.
- Remove door, see glass door removal section for instructions.

Always let the appliance cool to room temperature before servicing.

NOTE When the glass is cold and the appliance is lit, condensation may fog the glass. Condensation is normal and will disappear in a few minutes as the glass heats up.

1. Using a Phillips head screwdriver, remove screws securing burner to the mount. See diagram 1.
2. Remove the screw securing the aeration cap and lift burner from the unit. See diagram 2.
4. Using a Phillips head screwdriver, remove screws securing Pilot Shield.

3. Using a Phillips head screwdriver, remove screws securing Rear Deflector.

5. Remove the 14 screws securing the Access Panel.

6. The gas flex line can also be disconnected.

7. Remove the 2 Phillips screws securing the Wire Cover and place in a safe area.

8. Remove the screw that secures the IFC.

NOTE Wires must be secured by velcro straps when reinstalling.

9. Pull the IFC out to a position that the Motor and Pilot Wires are accessible. Disconnect the wires from the IFC.

10. Slide the wires through the grommet to remove.

11. Remove the final 7 screws securing the valve tray to the unit and lift the valve tray out. The Valve can then be replaced by removing the 4 screws securing it to the Valve Tray.

12. Reverse steps 11-1 to replace with new gas valve assembly.

NOTE Do not overtighten the aeration cap screw (step 2) when reinstalling.

maintenance

Gas Maintenance - Recommended Annual Routine

In order for your Regency appliance to continue to provide comfort to your home periodic maintenance must be performed to ensure it is operating at peak efficiency. The items in the list should be checked by a licensed gas service technician during the annual service check. Your unit may require more frequent maintenance checks if you notice any changes in how it operates. Operational changes to look for can include, but are not limited to, extended start up time, increased fan noise, residue/carbon build up, white build up on the glass/firebox, increased operating noise etc. Should any of these or other conditions arise, discontinue use and schedule a service check with your local licensed gas technician. The list below shows items your licensed service technician will need to check and service at least annually.

Clean	Inspect	Check
<ul style="list-style-type: none">• Glass• Interior bricks / panels• Burner ports & burner air shutter• Fan blades• Log set• Pilot orifices• Pilot hood (change as needed)• Flame sensor (electronic ignition models)• Flame electrode• Burner orifice• Thermocouple (millivolt models)• Thermopile (millivolt models)	<ul style="list-style-type: none">• Pilot assembly• Burner• Pressure relief gaskets/doors• Flue connector gasket if present• Door seal• Firebox• Venting• Batteries (remote handheld, battery backup holder, change as needed)• Burner media (change as needed)• Air shutter setting• Wiring	<ul style="list-style-type: none">• Voltage on thermocouple/thermopile (millivolt models)• Ohms reading on flame sense (electronic ignition models)• Inlet/outlet fuel pressures as per rating plate• Voltage/ohms readings on gas valve• Ohms reading to on/off switch circuit (Millivolt models)

Gas Leak Tests

- Check main gas line connection to valve
- Check shut off valve connections
- Check connection at gas valve outlet
- Check connection at main burner orifice
- Check pilot fuel line at valve and at pilot assembly

warranty

Limited Lifetime Warranty

FPI Fireplace Products International Ltd. (for Canadian customers) and Fireplace Products US, Inc. (for US customers) (collectively referred to herein as "FPI") extends this Limited Lifetime Warranty to the original purchaser of this Appliance provided the product remains in the original place of installation. The items covered by this Limited Lifetime Warranty and the period of such coverage are set forth in the table below.

An Appliance in this policy is defined as an Indoor Gas Fireplace, Indoor Gas Insert, Indoor Gas Freestanding Stove.

This Appliance has only been certified and listed for use indoors.**

This Limited Lifetime Warranty starts on the day the Appliance was purchased.

****Note:** There are select models which are approved for both indoor/outdoor use. See specific product manuals for details.

The Limited Lifetime Warranty is not transferable, amendable or negotiable under any circumstances.

Indoor Gas Products	Limited Lifetime	5 years	2 years	1 year	Subsidized Labor Coverage* (Years)
Warranty Coverage Parts and Labor					
Firebox and Heat Exchanger	✓				3
Steel Burner Tube	✓				3

All hardware				✓	1
WIFI Dongle				✓	1
Mesh/Glass Safety Barriers				✓	1
Accent Light Bulbs				✓	1
Glass (Crazing)				✓	1

Note: Warranty coverage noted above may not be applicable as components/options vary based on appliance purchased.

Conditions:

Warranty protects against defect in manufacture or FPI factory-assembled components only, unless herein specified otherwise.

***This warranty does not cover dealer travel costs, mileage, fuel, tolls for diagnostic or service work. All labor rates paid to authorized dealers are subsidized, pre-determined rates. Dealers may charge you for travel and additional time beyond their subsidy.**

Any part(s) found to be defective during the warranty period as outlined above will be repaired or replaced at FPI's option through an accredited distributor, dealer or pre-approved and assigned agent; provided that the defective part is returned to the distributor, dealer or agent for

inspection if requested by FPI. Alternatively, FPI may, at its discretion, fully discharge all of its obligations under warranty by refunding the verified purchase price of the product to the original purchaser. The purchase price must be confirmed by the original Bill of Sale. **The authorized selling dealer, or an alternative authorized FPI dealer if pre-approved by FPI, is responsible for all in-field diagnosis and service work related to all warranty claims. FPI is not responsible for results or costs of workmanship of unauthorized FPI dealers or agents in the negligence of their service work.**

At all times, FPI reserves the right to inspect reported in the field/on location complaints of products claimed to be defective before processing or authorizing any claim. Failure to allow this upon request will void the warranty.

All warranty claims must be submitted by the dealer servicing the claim, including a copy of the Bill of Sale (proof of purchase by you). All claims must be complete and provide full details as requested by FPI to receive consideration for evaluation. **Incomplete claims may be rejected.**

Replacement Appliances to the original purchaser are limited to one per warranty term. Appliances must be installed according to all manufacturers' instructions as per the manual. All Local and National required codes must be met.

The installer is responsible for ensuring the Appliance is operating as designed at the time of installation.

The original purchaser is responsible for the annual maintenance of the Appliance, as outlined in the owner's manual. As outlined below, the warranty may be voided due to problems caused by a lack of maintenance.

Records/receipts of any maintenance completed on the appliance must be kept in case asked for when dealer submits a warranty claim.

Purchased parts: Repair/replacement parts purchased by the consumer from FPI after the original coverage has expired on the Appliance will carry a **90-day** warranty from the purchase date, valid with a receipt only. Any item shown to be defective will be repaired or replaced at our discretion. No labor coverage is included with these parts.

Special Finishes - One year on brushed nickel, black chrome and antique copper faceplates/surrounds. You can expect some changes in color as the product "ages" with constant heating and cooling. FPI warrants the product for any manufacturing defects on the original product. However, the manufacturer's warranty does not cover changing colors and marks, i.e. fingerprints, etc. applied after the purchase of the product. Damage from the use of abrasive cleaners is not covered by warranty.

If freight damage has been found either externally or internally, the dealer must be informed within 3 days. All claims as a result of damage must be submitted by the dealer servicing the claim, including a copy of the Bill of Sale (proof of purchase). All claims must be complete and provide full details as requested by FPI to receive consideration for evaluation. **Incomplete claims may be rejected.**

As this is a Limited Lifetime Warranty, if the Appliance needs to be replaced, the Appliance that was purchased at the time of sale might not be replaced with exactly the same model Appliance. In that case, FPI will replace your Appliance with one that is similar at the time of replacement under the terms of this Limited Lifetime Warranty, but **ONLY** in the event that an item covered by the Limited Lifetime Warranty is found to be defective. Please refer to the table on first page of this warranty for items covered by the Limited Lifetime Warranty. Product changes might be the result of the original Appliance being discontinued, changes in regulatory requirements, product advancements, etc., which are beyond the control of FPI. **This Limited Lifetime Warranty does not cover any installation costs, or costs associated with changes of required clearances for the replacement Appliance, hearth pads, mantles, facing and/or facing materials such as framing, completed walls made of drywall, wood, non-combustible board, tile, brick, stone, marble etc., venting/chimney systems, or components of the chimney system.**

If a suitable replacement is not available, FPI will refund **50%** of the purchase price of the Appliance and any applicable FPI accessories (faceplates, brick panels, media, etc.) purchased at the time of sale. **In no event will FPI refund any portion of the purchase price of, or reimburse costs associated with, any other items, including without limitation, installation of a new Appliance, changes of required clearances for a new Appliance, hearth pads, mantles, facing and/or facing materials such as framing, completed walls made of drywall, wood, non-combustible board, tile, brick, stone, marble etc., venting/chimney systems, or components of the chimney system. A copy of the receipt or bill of sale will be necessary to validate the purchase price.**

For appliances approved for both Indoor/Outdoor use:

Optional finishing trims and faceplate's may be used in the outdoor environment. Plated faceplates are not recommended for outdoor installation due to the high potential for oxidation to form on the surface. However, please note that some fading or corrosion will occur due to environmental exposure. This would also apply to the gas appliance. Rust/corrosion is not covered under the terms of the warranty policy.

Fan kits may be installed but are not recommended in areas where there is high humidity. The appliance must be vented the same as if installed indoors. Follow the same guidelines/venting parameters when this is installed outdoors. Horizontal termination caps must not discharge into the same space shared by the front of the appliance. Vertical termination caps are recommended.

Appliances approved for use outdoors must be installed in a weatherproof enclosure while still following all clearance to combustible materials as outlined in the appliance manual.

warranty

Exclusions:

This Limited Lifetime Warranty does not extend to paint, rust or corrosion of any kind due to a lack of maintenance or improper venting, combustion air provision, corrosive chemicals (i.e. chlorine, salt, air, etc.), door, valve, pilot, fan cover, pressure relief door or glass gasketing, batteries, color fading, carbon/sooting of the log sets due to use and does not cover lava rock, platinum/glowing embers, and iron black embers, vermiculite.

Malfunction, damage or performance-based issues as a result of environmental conditions, location, chemical damages, downdrafts, installation error, an installation by an unqualified installer, incorrect chimney components (including but not limited to cap size or type), operator error, abuse, misuse, use of improper fuels, lack of regular maintenance and upkeep, acts of God, weather-related problems from hurricanes, tornados, earthquakes, floods, lightning strikes/bolts or acts of terrorism or war, which result in a malfunction of the Appliance are not covered under the terms of this Limited Lifetime Warranty.

FPI has no obligation to enhance or modify any Appliance once manufactured (i.e. as products evolve, field modifications or upgrades will not be performed on existing Appliances).

Any Appliance showing signs of neglect or misuse will not be covered under the terms of this warranty policy and may void this warranty, including Appliances with rusted or corroded fireboxes that have not been reported as rusted or corroded within **three (3)** months of installation/purchase.

Appliances which show evidence of being operated while damaged, or with problems known to the purchaser and causing further damages will void this warranty.

Appliances where the serial no. has been altered, deleted, removed or made illegible will void this warranty.

Minor movement, expansion and contraction of the steel is normal and is not covered under the terms of this warranty.

Freight damages for products or parts are not covered under the terms of the warranty.

Products made or provided by other manufacturers and used in conjunction with the FPI Appliance without prior authorization from FPI may void this warranty.

Limitations of Liability:

The original purchaser's exclusive remedy under this warranty, and FPI's sole obligation under this Limited Lifetime Warranty, express or implied, in contract or in tort, shall be limited to replacement, repair, or refund, as outlined above. IN NO EVENT WILL FPI BE LIABLE UNDER THIS WARRANTY FOR ANY INCIDENTAL OR CONSEQUENTIAL COMMERCIAL DAMAGES OR DAMAGES TO PROPERTY. TO THE EXTENT PERMITTED BY APPLICABLE LAW, FPI MAKES NO EXPRESS WARRANTIES OTHER THAN THE WARRANTY SPECIFIED HEREIN. THE DURATION OF ANY IMPLIED WARRANTY IS LIMITED TO DURATION OF THE EXPRESSED WARRANTY SPECIFIED ABOVE. IF IMPLIED WARRANTIES CANNOT BE DISCLAIMED, THEN SUCH WARRANTIES ARE LIMITED IN DURATION TO THE DURATION OF THIS WARRANTY.

Some US states do not allow limitations on how long an implied warranty lasts, or allow exclusion or limitation of incidental or consequential damages, so the above limitations or exclusions may not apply to you.

Customers located outside the US should consult their local, provincial or national legal codes for additional terms, which may apply to this warranty.

How to Obtain Warranty Service:

Customers should contact the authorized selling dealer to obtain warranty service. In the event the authorized selling dealer is unable to provide warranty service, please contact FPI by mail at the address listed below. Please include a brief description of the problem and your address, email and telephone contact information. A representative will contact you to make arrangements for an inspection and/or warranty service.

For fireplace care and tips and answers to most common questions please visit our Customer Care section on our Web Site. Please feel free to contact your selling dealer if you have any questions about your Regency product.

recycling

PRODUCT LIFE CYCLE:

By recycling your used appliances, you divert waste from your local landfills and help the environment. You also reduce the need for raw materials to manufacture new products. Contact your local municipality for appliance recycling services, local recycling programs, or appliance removal services to ensure your Regency appliance components, and packaging are properly recycled.
