WARNING:
If the information in these instructions are not followed exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

FOR YOUR SAFETY
Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

Installation and service must be performed by a qualified installer, service agency or the gas supplier.

FOR YOUR SAFETY
What to do if you smell gas:
• Do not try to light any appliance
• Do not touch any electrical switch: do not use any phone in your building.
• Immediately call your gas supplier from a neighbour's phone. Follow the gas supplier’s instructions.
• If you cannot reach your gas supplier, call the fire department.

Installer: Please complete the details on the back cover and leave this manual with the homeowner.
Homeowner: Please keep these instructions for future reference.
Congratulations! You are the owner of a state-of-the-art Gas Insert by FPI.

The FPI Gas Insert Series of hand crafted appliances has been designed to provide you with all the warmth and charm of a fireplace, at the flick of a switch. The models U31-NG3 and U31-LP3 of this series have been approved by Warnock Hersey for both safety and efficiency. As it also bears our own mark, it promises to provide you with economy, comfort and security for many trouble free years to follow. Please take a moment now to acquaint yourself with these instructions and the many features of your FPI Fireplace.

WARNING!

HOT GLASS WILL CAUSE BURNS

DO NOT TOUCH GLASS UNTIL COOLED

NEVER ALLOW CHILDREN TO TOUCH GLASS

We recommend that our products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) or in Canada by Wood Energy Technical Training (WETT).
Regency U31-3 Gas Fireplace Insert

DIMENSIONS

Note: Oversize faceplate is 44" x 28" (1118 mm x 711mm)

Low Profile Faceplate Dimensions

* Standard size shown, custom size also available.

</table>
NOTE: FPI units are constantly being improved. Check the label on the unit and if there is a difference, the label on the unit is the correct one.

This appliance must be installed in accordance with local codes, if any; if none, follow the National Fuel Gas Code, ANSI Z223.1, or Natural Gas and Propane Installation Code, CSA B149.1.

This appliance must be installed in accordance with the Standard CAN/CGA-2.17-M91(R2009) and CAN/CGA-2.17-M89(R2009) in Canada, or with the Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280, in the United States, or when such a standard is not applicable, the Manufactured (mobile) home where not prohibited by local codes. See owner's manual for details.

For the State of Massachusetts, the appliances individual manual shut-off must be a t-handle type valve.

The State of Massachusetts requires the installation of a carbon monoxide alarm in accordance with NFPA 720 and a CO alarm with battery back up in the same room where the gas appliance is installed.

For the State of Massachusetts, installation and repair must be done by a plumber or gas fitter licensed in the Commonwealth of Massachusetts.

For the State of Massachusetts, flexible connectors shall not exceed 36 inches in length.

For use with glass doors certified with the appliance only. Pour utilisation uniquement avec les portes en verre certifiées avec l'appareil.
5.08: Modifications to NFPA-54, Chapter 10

(2) Revise 10.8.3 by adding the following additional requirements:

(a) For all side wall horizontally vented gas fueled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes, including those owned or operated by the Commonwealth and where the side wall exhaust vent termination is less than seven (7) feet above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied:

1. INSTALLATION OF CARBON MONOXIDE DETECTORS. At the time of installation of the side wall horizontal vented gas fueled equipment, the installing plumber or gasfitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed. In addition, the installing plumber or gasfitter shall observe that a battery operated or hard wired carbon monoxide detector with an alarm is installed on each additional level of the dwelling, building or structure served by the side wall horizontal vented gas fueled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard wired carbon monoxide detectors.

   a. In the event that the side wall horizontally vented gas fueled equipment is installed in a crawl space or an attic, the hard wired carbon monoxide detector with alarm and battery back-up may be installed on the next adjacent floor level.

   b. In the event that the requirements of this subdivision can not be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.

2. APPROVED CARBON MONOXIDE DETECTORS. Each carbon monoxide detector as required in accordance with the above provisions shall comply with NFPA 720 and be ANSI/UL 2034 listed and IAS certified.

3. SIGNAGE. A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print size no less than one-half (1/2) inch in size, "GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL OBSTRUCTIONS".

4. INSPECTION. The state or local gas inspector of the side wall horizontally vented gas fueled equipment shall not approve the installation unless, upon inspection, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CMR 5.08(2)(a)1 through 4.

(b) EXEMPTIONS: The following equipment is exempt from 248 CMR 5.08(2)(a)1 through 4:

1. The equipment listed in Chapter 10 entitled "Equipment Not Required To Be Vented" in the most current edition of NFPA 54 as adopted by the Board; and

2. Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

(c) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM PROVIDED. When the manufacturer of Product Approved side wall horizontally vented gas fueled equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for installation of the equipment and the venting system shall include:

1. Detailed instructions for the installation of the venting system design or the venting system components; and

2. A complete parts list for the venting system design or venting system.

(d) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM NOT PROVIDED. When the manufacturer of a Product Approved side wall horizontally vented gas fueled equipment does not provide the parts for venting the flue gases, but identifies "special venting systems", the following requirements shall be satisfied by the manufacturer:

1. The referenced "special venting system" instructions shall be included with the appliance or equipment installation instructions; and

2. The "special venting systems" shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

(c) A copy of all installation instructions for all Product Approved side wall horizontally vented gas fueled equipment, all venting instructions, all parts lists for venting instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation.
FOR YOUR SAFETY
This appliance requires air for proper combustion. Always provide adequate combustion and ventilation air. Follow instructions and information in CSA B149.1 (in Canada) or the National Fuel Gas Code ANS Z223.1/NFPA (in the USA), regarding requirements for combustion and ventilation air.

INSTALLATION AND REPAIR SHOULD BE DONE BY AN AUTHORIZED SERVICE PERSON. THE APPLIANCE SHOULD BE INSPECTED BEFORE USE AND AT LEAST ANNUALLY BY A PROFESSIONAL SERVICE PERSON. MORE FREQUENT CLEANING MAY BE REQUIRED DUE TO EXCESSIVE LINT FROM CARPETING, BEDDING MATERIAL, ETC. IT IS IMPERATIVE THAT CONTROL COMPARTMENTS, BURNERS AND CIRCULATING AIR PASSAGEWAYS OF THE APPLIANCE BE KEPT CLEAN.

DUE TO HIGH TEMPERATURES, THE APPLIANCE SHOULD BE LOCATED OUT OF TRAFFIC AND AWAY FROM FURNITURE AND DRAPERIES.

WARNING: FAILURE TO INSTALL THIS APPLIANCE CORRECTLY WILL VOID YOUR WARRANTY AND MAY CAUSE A SERIOUS HOUSE FIRE.

CHILDREN AND ADULTS SHOULD BE ALERTED TO THE HAZARDS OF HIGH SURFACE TEMPERATURES, ESPECIALLY THE FIREPLACE GLASS, AND SHOULD STAY AWAY TO AVOID BURNS OR CLOTHING IGNITION.

CLOTHING OR OTHER FLAMMABLE MATERIAL SHOULD NOT BE PLACED ON OR NEAR THE APPLIANCE.

WARNING: FAILURE TO INSTALL THIS APPLIANCE CORRECTLY WILL VOID YOUR WARRANTY AND MAY CAUSE A SERIOUS HOUSE FIRE.

YOUNG CHILDREN SHOULD BE CAREFULLY SUPERVISED WHEN THEY ARE IN THE SAME AREA AS THE APPLIANCE. TODDLERS, YOUNG CHILDREN AND OTHERS MAY BE SUSCEPTIBLE TO ACCIDENTAL CONTACT BURNS. A PHYSICAL BARRIERS IS RECOMMENDED IF THERE ARE AT RISK INDIVIDUAL IN THE HOUSE. TO RESTRICT ACCESS TO A FIREPLACE OR STOVE, INSTALL AN ADJUSTABLE SAFETY GATE TO KEEP TODDLERS, YOUNG CHILDREN AND OTHER AT RISK INDIVIDUALS OUT OF THE ROOM AND AWAY FROM HOT SURFACES.
IMPORTANT: SAVE THESE INSTRUCTIONS

The Regency Gas Insert must be installed in accordance with these instructions. Carefully read all the instructions in this manual first. Consult the building authority having jurisdiction to determine the need for a permit prior to starting the installation.

NOTE: Failure to follow the instructions could cause a malfunction of the heater which could result in death, serious bodily injury, and/or property damage. Failure to follow these instructions may also void your fire insurance and/or warranty. This appliance can be used with a thermostat.

FOR YOUR SAFETY

This appliance requires air for proper combustion. Always provide adequate combustion and ventilation air. Follow instructions and information in CAN/CGA B149 (in Canada) or the National Fuel Gas Code ANSI Z223.1 (in the USA), regarding requirements for combustion and ventilation air.

SPECIFICATIONS

At pressures over 1/2 psig, the pipe to the unit must be disconnected.

Gas Input Capacity:
- Natural Gas: 30,000 Btu/h
- Propane: 28,000 Btu/h

Fuels: Approved for use with both natural gas, and propane. Approved as for use at 0° to 2,000°. With a field installed conversion kit 0° - 4,500°.

Electrical: 120V A.C. system.

Circulation Fan: Variable speed, 127 CFM.

Log Set: Ceramic fibre, 7 per set.

Vent System: Minimum 4” B-Vent or listed gas fuel vent liner.

GAS PRESSURE TESTING

The appliance must be isolated from the gas supply piping system by closing its individual manual shut off valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psig. (3.45 kPa). Disconnect piping from valve at test pressures over 1/2 psig (3.45 kPa).

GAS PRESSURE TESTING

In Canada, testing of the gas supply piping system at test pressures equal to or less than 1/2 psig (3.45 kPa). Disconnect piping from valve at test pressures over 1/2 psig (3.45 kPa). The appliance must be isolated from the gas fuel vent liner.

General Safety Information

1) The appliance installation must conform with local codes or in the absence of local codes, with CAN/CGA B149 (in Canada) or the National Fuel Gas Code ANSI Z223.1. This appliance should be installed by a qualified gas fitter technician only.

2) Installation and repair should be done by a qualified service person.

3) The appliance should be inspected before use and at least annually by a professional service person. More frequent cleaning may be required due to excessive lint from carpeting, bedding material, animal hair, etc. It is imperative that control compartments, burners and circulating air passageways of the appliance be kept clean.

4) See general construction and assembly instructions. This appliance may only be installed in a vented, non-combustible fireplace.

5) This appliance is Listed for bedroom installations. In Canada room heaters must be installed with a Listed Millivolt Thermostat. Some areas may have further requirements, check local codes before installation.

6) This unit is not approved for installation into a mobile home.

7) Always connect this insert to a vent system venting to the outside of the building envelope. Never vent to another room or inside a building. Make sure that the vent is properly sized and is of adequate height to provide the proper draft.

8) Inspect the venting system annually for blockage and any signs of deterioration.

9) Any glass removed for servicing must be replaced.

10) To prevent injury, do not allow anyone who is unfamiliar with the operation to use the fireplace.

11) Failure to position the parts in accordance with the diagrams in this manual or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

12) Due to high temperatures, the appliance should be located out of high traffic areas and away from furniture and draperies. Children and adults should be alerted to the hazards of high surface temperatures, especially the fireplace glass and gold trims, and should stay away to avoid burns or clothing ignition. Young children should be carefully supervised when they are in the same room as the appliance. Clothing or other flammable material should not be placed on or near the appliance.

POLICY FOR SOLID FUEL BURNING AND FACTORY BUILT FIREPLACES

The FPI U31-3 may be installed and vented into any solid fuel fireplace that has been installed in accordance with the National, Provincial and local building codes and is constructed of non-combustible materials.

1) Installer must mechanically attach the supplied label to the inside of the firebox of the fireplace into which the gas fireplace insert is installed.

WARNING: This fireplace has been converted for use with a gas fireplace insert only and cannot be used for burning wood or solid fuels unless all original parts have been replaced, and the fireplace re-approved by the authority having jurisdiction.

2) Do not cut any sheet-metal parts of the fireplace, in which the gas fireplace insert is to be installed.

3) If the factory-built fireplace has no gas access hole(s) provided, an access hole of 1-1/2” (37.5mm) or less may be drilled though the lower sides or bottom of the firebox in a proper workmanship like manner. This access hole must be plugged with a non-combustible insulation after the gas supply line has been installed.

4) The fireplace flue damper can be fully blocked open or removed for installation of the gas fireplace insert.

5) The fireplace and fireplace chimney must be clean and in good working order and constructed of non-combustible materials.

6) The chimney cleanouts must fit properly.

7) Refractory (firebricks), glass doors, screen rails, screen mesh and log grates can be removed from the fireplace before installing the gas fireplace insert.

8) Smoke shelves, shields and baffles may be removed if attached by mechanical fasteners. If any part is removed it must not weaken the structural integrity of the factory built.

9) Trim panels or surrounds shall not seal ventilation openings in the fireplace.

BEFORE YOU START

Safe installation and operation of this appliance requires common sense, however, we are required by the Canadian Safety Standards and ANSI Standards to make you aware of the following:

Emissions from burning wood or gas could contain chemicals known to the State of California to cause cancer, birth defects or other reproductive harm.
INSTALLATION

CHECKLIST

The Regency Gas Insert is installed as listed below.

1) Unit Location - check Clearances to Combustibles.

2) Make the gas connections. Convert to Propane Gas if necessary.

3) Install the flue or liner to the sliding draft hood.

4) Install Venting. Slide the unit into the fireplace. Attach draft hood to the insert.

5) Test gas pressure. Check aeration

6) Test for flue spillage.

7) Install the optional brick panels.

8) Install the log set.

9) Assemble and install the faceplate and trim.

10) Install the glass front.

11) Install louvers.

12) Install Optional Double Screen Door.

13) Install Optional Remote Control and Optional Wall Thermostat.

14) Final check: Before leaving this unit with the customer, the installer must ensure that the appliance is firing correctly. This includes:

   a) Clocking the appliance to ensure the correct firing rate.
   b) Adjusting the primary air, if required, to ensure that the flame does not carbon.
   c) Ensuring that the appliance is venting correctly.

MATERIALS REQUIRED

No electrical power supply is required for the gas control to operate. A 120 Volt AC power cord is hooked up to the fan. Plug the 3 wire cord into a suitable receptacle. **Do not cut the ground terminal off under any circumstances.** When connected with 120 volts, the appliance must be electrically grounded in accordance with local codes, or in the absence of local codes, with the current Canadian Electrical Code CSA C22.1 (in Canada) or with the current National Electrical Code ANSI/ NFPA 70-1987 (in U.S.A.).

NOTE: This unit is equipped with a heat sensor thermodisc which will prevent the blower from operating until the unit reaches the correct temperature.

MINIMUM FIREPLACE DIMENSIONS

The minimum fireplace dimensions for the FPI gas fireplace insert are shown in the following diagrams:

CLEARANCES TO COMBUSTIBLES

<table>
<thead>
<tr>

</tr>
<tr>
<td>Max. Alcove Depth</td>
<td>L</td>
<td>36” / 915 mm</td>
</tr>
</tbody>
</table>

* No Hearth Required

**Note:** If you are installing the Excalibur Surround, the minimum fireplace dimensions are as follows:

- Width (at front): 29” (737mm)
- Depth: 16” (406mm)

Combustible Mantel Clearances in Masonry Installation

**Note:** A non-combustible mantel may be installed at a lower height if the framing is made of metal studs covered with a non-combustible board.

NOTE: Mantel clearances for installation into a Zero Clearance Kit are different. Please refer to the Zero Clearance Kit Manual for details.
Conversion Kit from Natural Gas to Propane
Model #404-969 for: U31-NG3 Units

THIS CONVERSION MUST BE DONE BY A QUALIFIED GAS FITTER. IF IN DOUBT DO NOT DO THIS CONVERSION!!

1) Turn the unit off and allow it to cool to room temperature.
2) Unplug or disconnect power source to stove.
3) Remove glass front (see manual).
4) Remove logs and brick panels (if installed).
5) Remove the Grate by removing the screws on each side of the grate.
6) Remove the Burner Tray by removing the screws on each side of the tray. Push the tray to the left and lift up.
7) Remove burner orifice with 1/2" wrench and replace with the #52 orifice in the Kit.
8) Turn control knob to the “OFF” position
9) Remove the black protection cap by hand from the hi-low knob (Fig. 1).
10) Insert a 5/32" or 4mm Allen wrench into the hexagonal key-way of the screw (Fig. 2), rotate it counter-clockwise until it is free and extract it.
11) Check that the screw is clean and if necessary remove dirt.
12) Flip the screw (Fig. 3).
13) Using the Allen wrench as shown in Fig. 4, rotate the screw clockwise until snug, do not overtighten.
14) Verify that if the conversion is from NG to LPG, the screw must be re-assembled with the red o-ring visible (Fig. 5).
15) Re-assemble the black protection cap (Fig. 6).
16) Reverse steps 6 - 1.
17) Pull off the pilot cap to expose the pilot orifice.
18) Unscrew the pilot orifice with the allen key and replace with the LP pilot orifice in the kit.
19) Replace Burner Tray and reverse steps 5) to 1).
20) Adjust the burner aeration setting to 3/8" to 3/8" as required for the best flame picture.

WARNING!
Do not over tighten the screw. Recommended to grip the wrench by the short side.
GAS CONNECTION

GAS CONNECTION WARNING:
Only persons licensed to work with gas piping may make the necessary gas connections to this appliance.

1) If the appliance is to be installed into an existing chimney system, thoroughly clean the masonry or factory built fireplace.

2) The appliance is provided with an opening on the left hand side of the control compartment. A 1/2" gas supply pipe must be brought near this inlet hole. (See Diagram 3 on page 11).

3) Locate the center point where the vent will pass through the chimney above the appliance. Move the appliance into the exact location where it is to be installed. Ensure that the Insert is level.

4) The installer must provide a valve with a plugged tapping, accessible for test gauge connection, immediately upstream of the gas supply connection to the appliance.

HIGH ELEVATION

This unit is approved in Canada for altitude 0 to 2000 ft. with the orifice supplied. For 0' - 4500' use the optional field conversion kit (Part #400-970 for Natural Gas units and Part #400-971 for Propane units). In USA refer to ANSI Z223.1-1988, Appendix F, for re-sizing orifice.

VENTING

This appliance is designed to attach to a 4" diameter type B-Vent or listed gas fuel type vent liner running the full length of the chimney. A minimum flue height of 12 feet is recommended. B-Vent must be supported by a vent support - supplied by vent manufacturer. See chart on this page for minimum distances from roof.

The Regency Insert incorporates its own internal draft hood, so no additional external draft hood is required.

Periodically check that the vent is unrestricted and an adequate draft is present when the unit is in operation. (See page 8 for spillage test.) Before installing vent system ensure that the damper plate is open and secure to prevent the damper plate from falling down and crushing the liner.

DRAFT HOOD CONNECTION

1) Attach the vent to the flue collar on the detachable draft hood. The flue collar of the appliance will fit inside a standard vent and may be fastened directly to the vent by sheet metal screw. Diagram 1.

2) Before pushing the appliance into position inside the fireplace, align the draft hood with the guides on the insert top and pull forward. While pushing the unit back into place, keep pulling the draft hood forward until the screw hole in the spill tube aligns with the screw hole in the draft hood locking tab on the underside of firebox top. The screw is secured through the draft hood locking tab into the front of the spill tube. (If screw holes do not line up then draft hood is not positioned correctly.

WARNING: Operation of this appliance when not connected to a properly installed and maintained venting system or tampering with the blocked vent shutoff system can result in carbon monoxide (CO) poisoning and possible death.

Combustion and Ventilation Air

WARNING: This appliance needs fresh air for safe operation and must be installed with provisions for adequate combustion and ventilation air available to the room in which it is to be operating.

Follow CAN/CGAB149 (in Canada) or ANSI Z223.1 (in the USA) requirements, and any local codes or regulations of the enforcing authority.

Air for combustion is drawn in through the front of the unit, therefore, the front of the unit must be kept clear of any obstructions.

GAS PRESSURE TEST

The unit is preset to give the correct gas input at the specified manifold pressures shown on the label. The maximum gas manifold pressure is:

Natural Gas 3.5" w.c.
Propane 10" w.c.

The manifold pressure is controlled by a regulator built into the gas control, and should be checked at the pressure test point. The pressure check should be carried out with the unit burning and the setting should be within the limits specified.
**GAS INSERT AERATION SYSTEM**

The aeration adjustment rod is attached to the air shutter which is located just above the orifice bracket. The rod is used to adjust the aeration on the main burner without having to take the appliance apart.

The burner aeration is factory set but may need adjusting due to either the local gas supply, air supply or altitude.

- **Natural Gas:** 3/8” (9.5mm) open
- **Propane:** 3/8” (9.5mm) open

*Note:* Any damage due to carboning resulting from improperly setting the aeration controls is NOT covered under warranty.

*Note:* Aeration Adjustment should only be performed by an authorized FPI Installer at the time of installation or service.

**TEST FOR FLUE SPILLAGE**

A “spillage” test must be made before the installed unit is left with the customer. Follow the procedure below:

1) Start all exhaust fans in the home and then close all external doors and windows in the house.

2) Light the unit and set controls to maximum. Turn fan off.

3) After five minutes, test that there is a “pull” on the flue by placing a smoke match, cigarette or similar device which gives off smoke, in front of the spill tube. To ensure a valid test, place a scrap piece of sheet metal (or other noncombustible material) between the spill tube and the upper louver, this will prevent the natural convection of the unit from interfering with the test. See diagram 1.

Check for proper draft by placing a match close to the draft check opening. This should be checked after the unit has been operating for 15 min.

The smoke should be drawn into the spill tube. If the smoke is still not drawn into the spill tube, turn the unit off and check for the cause of the lack of draft. If necessary, seek expert advice.

For wind turbulent sites, a wind cap may remedy the problem.

**OPTIONAL BRICK PANEL**

1) Unwrap the brick pattern panels from the protective wrapping.

2) Remove the glass front if it is already installed.

3) Put the rear brick panel flat against the back of the unit.

4) Before installing the side brick panels, loosen the screws for the brick tabs enough so that you can slide the brick clips on to the screws easily but that the tabs are secure. For the location of the side brick tab screws see Diagram 2.

5) Slide brick panel under brick clips, tighten screws securing clips to complete installation.

*Note:* The thermally activated safety switch will sense the change in temperature and shut down the gas valve in the event of a severe downdraft or a blocked or disconnected vent. The switch acts as a safety shut-off to prevent a build-up of carbon monoxide. If the flue is blocked or has no “draw”, the switch will automatically shut off the supply of gas within 5 - 10 minutes. Tampering with the switch can result in carbon monoxide (CO) poisoning and possible death.

If the heater turns off because of lack of draft during the spillage test, check for the cause and if necessary, seek expert advice.

The thermally actuated safety switch will automatically reset after it has cooled off. The switch will continue to cycle until the draft problem is corrected. DO NOT BYPASS OR DISCONNECT THIS SWITCH.
LOG SET INSTALLATION

Read the instructions below carefully and refer to the diagrams. If logs are broken do not use the unit until they are replaced. Broken logs can interfere with the pilot operation.

The gas log kit contains the following:

- **a) 02-43** Rear Log
- **b) 02-45** Front Right Log
- **c) 02-56** Middle Left Log
- **d) 02-46** Left Top Log
- **e) 02-47** Center Log
- **f) 02-48** Middle Right Log
- **g) 02-44** Front Left Log
- **h) 902-154** Embers
- **i) 902-153** Rockwool
- **j) 902-179/P** Vermiculite
- **k) 946-669** Platinum Embers (supplied with packaged manual)

1) Carefully remove the logs from the box and unwrap them. The logs are fragile, handle with care - do not force into position.

2) Sprinkle the vermiculite around the firebox base. Take some of the embers (approx. 1/3 of the bag) and sprinkle over the vermiculite.

3) Place Rear Log A)02-43 on the two pins on the rear log support.

4) Place Front Right Log B)02-45 on the two pins as shown.

Note: Install Optional Brick Panels prior to installing logs.
5) Place the Middle Left Log C)02-56 on the two pins as shown.

6) Place the Left Top Log D)02-46 on the pin on Log C)02-56 and on top of the cutout on Log A)02-43.

7) Place the notch in Center Log E)02-47 over Log B)02-45 and across the cutout on Log A)02-43.

8) Position notch in Front Right Log F)02-48 on Log E)02-47 and push the bottom right edge against the bracket on the burner tray and the front edge of the rear burner.
10) Place the embers and Rockwool on the exposed front burner tray.

11) Separate platinum embers and place on and around the embers and rockwool on the burner tray. Avoid stacking platinum embers.

12) Test fire to ensure proper light off (make sure flame flows smoothly from one end of burner to the other. If there is any flame hesitation, check that area for any blockage of the burner port.

The "02" refer numbers (i.e. 02-43) are molded into the rear of each log.
FACEPLATE & TRIM INSTALLATION

1) Lay the faceplate panels flat, face down on something soft so they don't scratch.

2) Take the top faceplate and align the holes in it with the holes in the side panels. Using the screws provided, attach from the top of the panel (the holes in the top panel are slightly larger than the holes in the side panel to facilitate easier installation). Diagram 1.

Hint: Don't tighten the screws down completely at this point, continue on with steps 3 and 4 and do a trial fit to the unit. Make any necessary adjustments and when it fits properly then tighten down the screws.

Hearth Trim Option: Hearth Trim is an option that can be used to finish off the installation when the bottom of the fireplace is higher than the hearth or to raise the fireplace. Attach the Hearth Trim to the bottom of the faceplate side panels with the screws provided. See Diagram 1.

3) Using the connectors provided, join the left side trim (with the ON/OFF switch) to the top trim. Diagram 2. Connect the right side trim to the top trim.

4) Place the trim on the assembled faceplate panels, aligning the wire connections from the switches with the notch on the left side panel.

5) Connect the fan switch wires by taking the black and red wires with the male ends (in the grey harness) and connect them with the wire connectors from the fan speed control.

6) Connect the ON/OFF switch wires by taking the black and red wires with the female ends and connect them to the ON/OFF switch.

7) Tuck the wires into the faceplate to keep them away from the insert using the clip provided. Attach the clip to the rear of the faceplate to ensure that the wires do not touch the side of the unit. Diagram 3.

8) The power cord should be run behind the faceplate panel.

9) Attach the brass trim to the faceplate by drilling a 1/8" hole through into the faceplate using the hole in the trim as a guide. Fasten the trim to the faceplate panels using the plated screws. Diagram 4.

10) Attach the faceplate panels to the insert body using the 4 remaining black screws. Diagram 5.

11) Push the Regency logo plate into the two holes in the bottom left corner of the faceplate.
**FLUSH FRONT INSTALLATION**

1) Install Logs before going on to the next step. See the Log Installation instruction sheet or page 9.

2) Install the bottom glass trim by hooking the trim into the lip on the firebox base. The trim will not fit into place if the glass is installed first.

3) Place the bottom of the flush glass behind the bottom glass trim.

4) Secure the glass with the two glass clips at the top corners of the glass. Secure glass clips with the screws provided. Do not over tighten as this could break the glass.

5) Slide in the top glass trim under the spring clips.

**FLUSH LOUVERS**

1) The Top Louver is held in place by friction fit, if the Louver needs to be adjusted; bend the bracket out as shown in the diagram.

2) Install the Spring Hinges on the left and right side of the bottom of the Firebox using 2 screws per hinge.

3) Place the Bottom Louver near the hinge. Flip hinge over the Bottom Louver and secure using 3 screws.

**MESH GUARD INSTALL**

Line up hooks on mesh guard with slots on unit. Slide mesh guard down into slots until securely in place.

WIRING DIAGRAM

This heater does not require a 120V A.C. supply for operation. In case of a power failure, the burner switch and the optional remote control/thermostat will continue to operate. However, a 120V A.C. power supply is needed for the fan/blower operation.

Caution: Ensure that the wires do not touch any hot surfaces and are away from sharp edges.

CAUTION: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation.

WARNING: Electrical Grounding Instructions
This appliance is equipped with a three pronged (grounding) plug for your protection against shock hazard and should be plugged directly into a properly grounded three-prong receptacle. Do not cut or remove the grounding prong from this plug.
FULL SCREEN FRONT

1) Hold the full screen door up against the unit in order to make the following wire connections.

Pull the ON/OFF connector wires from the firebox and connect them to the switch.

Connect the fan switch wires with the wire connectors from the fan speed control. Place clips over wires and tuck into side trim.

2) Lift unit up slightly and push down on the corners of the Bottom Trim Bracket and slide under unit. Unit should touch tabs on Bottom Trim Bracket.

3) Completely secure the full screen door to the unit by securing 4 screws to the Left and Right Side Trims.

NOTE: When mounting the full screen door to the unit, the inside flange of the side trims are to fit over the inner side of the unit flange and NOT next to the outer side of the unit flange.
INSTALLATION

EXCALIBUR SURROUND
INSTALLATION

IMPORTANT NOTE:
When using the Surround, the unit must be set 1" further into the fireplace than the standard faceplate installation. See the diagrams below for the correct minimum fireplace opening requirements.

1) Align the left side Faceplate Trim Bracket with the Firebox Flange and secure using 2 screws as shown in diagram 1. Repeat for right side.

2) Align the cut-outs in the Blanking Plate with the pins located on the inside top of the firebox. Slide the Blanking Plate into position ensuring it goes under the 2 flanges.

3) Hold the Faceplate Trim up against the unit in order to make the following wire connections.

- Pull the ON/OFF connector wires from the firebox and connect them to the switch.
- Connect the fan switch wires with the wire connectors from the fan speed control. Place clips over wires and tuck into side trim.

Faceplate Trim Bracket
Firebox Flange

IMPORTANT NOTE:
When using the Surround, the unit must be set 1" further into the fireplace than the standard faceplate installation. See the diagrams below for the correct minimum fireplace opening requirements.

21"

29"

ON/OFF switch
Fan Speed Switch (Rear View)
wires to ON/OFF switch
wires to Fan switch connectors
Self-adhesive wire clip
4) Secure the Faceplate by sliding the slots in the Faceplate into the flanges on the left and right side Faceplate Trim Brackets. Once the Faceplate is in place secure using 2 screws per side.

5) Place the bottom hooks of the Surround into the bottom slots of the Faceplate. Slightly pull up the Surround and push the top hooks into the top slots of the Faceplate. Push down to secure. Tug on the Surround to ensure it is securely locked in place.
**INSTALLATION**

**LOW PROFILE FACEPLATE INSTALLATION**

1) Attach the inner faceplate panel to the insert body using 4 screws in the locations shown below.

2) Connect the male end black and red fan switch wires to the wire connectors from the fan speed control.

3) Connect the female ends of the ON/OFF switch - to the ON/OFF switch in the control box.

4) Tuck the wires into the clip to keep them away from the insert using the clip provided. Attach the clip to the rear of the faceplate to ensure that the wires do not touch the side of the unit. The power cord should be run behind the inner faceplate panel.

5) Install the on/off switch - fan speed control box to the left hand bottom leg of the inner faceplate. Controls located on the left side.

6) Feed wires through the left air chamber clip - then clip them it to lower left of firebox as show below.
7) Clip the right side air chamber clip as shown below in Diagram 8.

8) Attach 2 brackets near the bottom of the unit with one screw as shown below in Diagram 9 (left and right brackets are interchangeable).

9) Attach Regency logo to bottom louver. Install bottom louver by hanging louver on brackets installed in step 8.

10) Hook door frame on 2 pins over glass door in locations shown below in Diagram 11.

11) Take the outer faceplate, line up the openings on the left and right legs and install onto the inner faceplate panel pins.
OPTIONAL WALL THERMOSTAT

A wall thermostat may be installed if desired. Connect the wires as per the wiring diagrams. Note that the wires are connected to the "TH" on the gas valve. Use table on page 14 to determine the maximum wire length:

Note: Preferable if the thermostat is installed on an interior wall.

FPI offers an optional programmable thermostat but any 250-750 millivolt rated non-anticipator type thermostat that is CSA, ULC or UL approved may be used.

CAUTION
Do not connect the millivolt wall thermostat wires to the 120V wires.

</tr>
</tbody>
</table>

OPTIONAL REMOTE CONTROL

Use the FPI Remote Control Kit approved for this unit. Use of other systems may void your warranty.

The remote control kit comes with a hand held transmitter, a receiver and a wall mounting plate.

1) Choose a convenient location on the wall to install the receiver and the receptacle box (protection from extreme heat is very important). Run wires from the fireplace to that location, use Thermostat Wire Table.

2) Connect the wires as per the wiring diagram above.

CAUTION
Do not connect the millivolt remote control wires to the 120V wires.

OPERATING INSTRUCTIONS

Before operating this appliance, proceed through the following check list.

1) Read and understand these Instructions before operating this appliance.

2) Check to see that all wiring is correct and enclosed to prevent possible shock.

3) Check to ensure there are no gas leaks.

4) Make sure the glass door is in place. Never operate the appliance with the door glass removed.

5) Verify that all venting and the cap is unobstructed.

6) Verify log placement. If the pilot cannot be seen when lighting the unit - the logs or the embers have been incorrectly positioned.

7) The unit should never be turned off and on again without a minimum of a 60 second wait.

8) When lighting the appliance, the inside of the glass may fog up. This will burn off after a few minutes of operation.

9) Rotate the variable flame control to adjust the flame height higher or lower.

10) Close the bottom louver assembly.

820 S.I.T. VALVE DESCRIPTION

1) Gas on/off knob
2) Manual high/low adjustment
3) Pilot Adjustment
4) Thermocouple Connection - option
5) Outlet Pressure Tap
6) Inlet Pressure Tap
7) Pilot Outlet
8) Main Gas Outlet
9) Alternative TC Connection Point

LIGHTING PROCEDURE

IMPORTANT: Gas cock knob cannot be turned from "PILOT" to "OFF" unless it is partially depressed.

1) Open the bottom louver assembly
SHUTDOWN PROCEDURE

1) Use the rocker switch to turn off the main burner.
2) Open the bottom louver assembly.
3) Push in the gas control knob slightly and turn clockwise to "OFF". Do not force.
4) Disconnect all electric power and gas to the appliance if service is to be performed.

FIRST FIRE

The first fire in your stove is part of the paint curing process. To ensure that the paint is properly cured, it is recommended that you burn your fireplace for at least four (4) hours the first time you use it with the fan on. When first operated, the unit will release an odour caused by the curing of the paint, the burning off of any oils remaining from manufacturing. Smoke detectors in the house may go off at this time. Open a few windows to ventilate the room for a couple of hours.

The glass panel may require cleaning after the unit has cooled down.

DO NOT ATTEMPT TO CLEAN THE GLASS WHILE IT IS HOT.

Note: When the glass is cold and the appliance is lit, it may cause condensation and fog the glass. This condensation is normal and will disappear in a few minutes as the glass heats up.

DO NOT BURN THE APPLIANCE WITHOUT THE GLASS FRONT IN PLACE.

COPY OF LIGHTING INSTRUCTION PLATE

FOR YOUR SAFETY READ BEFORE LIGHTING

This appliance must be installed in accordance with local codes, if any. If none, follow the National Fuel Gas Code, ANSI Z223.1/NFPA 54, or Natural Gas and Propane Installation Codes. CSA B149.1 (Australia: AS/NZS 5600, New Zealand: NZ2 0261.)

WARNING: If you do not follow these instruction exactly, a fire or explosion may result causing property damage, personal injury or loss of life. Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to the owner’s information manual provided with this appliance. For assistance or additional information consult a qualified installer, service agency, or gas supplier.

This appliance has a pilot which must be lit by hand. When lighting the pilot, follow these instructions:

1) Before lighting, check the appliance area for gas. Be sure to smell gas before you turn the control to the pilot. There is no pilot light. Instead, there is a small glow to hold the control knob in for about 20 seconds after the pilot is lit. Release the control knob to allow the pilot to light the main burner. Do not try to light any appliance.
2) Do not force any electric switch; do not use any phone in your building.
3) Immediately call your gas supplier from a neighbor's phone.
4) Follow the gas supplier's instructions.
5) Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn, it is still hot. Immediately call a qualified service technician.
6) Do not use the appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

This appliance needs fresh air for safe operation and must be installed so there are provisions for adequate combustion and ventilation air.

CAUTION: Hot while in operation. Do not touch. Severe burns may result. Due to high surface temperatures keep children, clothing and furniture, gasoline and other liquid having flammable vapors away. Keep burner and control compartment clean. See installation and operating instructions accompanying appliance.

LIGHTING INSTRUCTIONS

STOP! Read the safety information above on this label.

FOR UNITS NOT EQUIPPED WITH ELECTRIC SPARK BOXES:

1) Push in gas control knob slightly and turn clockwise to "OFF".
2) Wait five (5) minutes to clear out any gas. If you then smell gas STOP!
3) Turn off all electric power to the appliance if service is to be performed.
4) Disconnect all electric power and gas to the appliance if service is to be performed.
5) Do not try to light any appliance.
6) Do not use the appliance if any part has been under water.
7) Turn gas control knob counterclockwise to "ON".
8) Use rocker switch to operate main burner.

FOR ALL PROPANE UNITS AND UNITS EQUIPPED WITH ELECTRIC SPARK BOXES

1) Push in gas control knob slightly and turn clockwise to "ON" position.
2) Push in control knob all the way and hold in until the pilot lights up. Continue to hold the control knob in for about 30 seconds after the pilot has lit. Release knob.
3) Turn the appliance knob to the desired speed. The fan will turn on as the stove comes up to operating temperature. After the unit has been turned off and the unit cooled to below a useful heat output range the fan will shut off automatically.

FPI gas appliances use high tech blowers to push heated air farther into the room. It is not unusual for the fan to make a "whirring" sound when ON. This sound will increase or decrease in volume depending on the speed setting of your fan speed control.

Burner Tray: The burner tray is positioned directly under the burner tube(s) and logs and is made of a different gauge material from the rest of the firebox and body. Therefore, the varying thicknesses of steel will expand and contract at slightly different rates which can cause "ticking" and "cracking" sounds. You should also be aware that as there
are temperature changes within the unit these sounds will likely re-occur. Again, this is normal for steel fireboxes.

Blower Thermidisc:
When this thermally activated switch turns ON it will create a small “clicking” sound. This is the switch contacts closing and is normal.

Pilot Flame:
While the pilot flame is on it can make a very slight "whisper" sound.

Gas Control Valve:
As the gas control valve turns ON and OFF, a dull clicking sound may be audible, this is normal operation of a gas regulator or valve.

Unit Body/Firebox:
Different types and thicknesses of steel will expand and contract at different rates resulting in some “cracking” and “ticking” sounds will be heard throughout the cycling process.

5) Keep the area near the appliance clear and free from combustible materials, gasoline and other flammable vapours and liquids.

**WARNING:** CHILDREN AND ADULTS SHOULD BE ALERTED TO THE HAZARDS OF HIGH SURFACE TEMPERATURE AND SHOULD STAY AWAY TO AVOID BURNS OR CLOTHING IGNITION. YOUNG CHILDREN SHOULD BE CAREFULLY SUPERVISED WHEN THEY ARE IN THE SAME ROOM AS THE APPLIANCE.

**CAUTION:** ANY SAFETY SCREEN OR GUARD REMOVED FOR SERVICING AN APPLIANCE MUST BE REPLACED PRIOR TO OPERATING THE APPLIANCE.

**CLOTHING OR OTHER FLAMMABLE MATERIAL SHOULD NOT BE PLACED ON OR NEAR THE APPLIANCE.**

1) Always turn the gas valve to off before cleaning. For relighting, refer to lighting instructions. Keep the burner and control compartment clean by brushing and vacuuming at least once a year. When cleaning the logs, use a clean soft paint brush as the logs are fragile and easily damaged.

2) Clean (never when unit is hot) appliance, door and louvers with a damp cloth. Never use an abrasive cleaner. The gold louvers (and optional gold door) may be scratched if abrasives are used to clean them. The heater is finished in a heat resistant paint and should only be refinished with heat resistant paint (not with wall paint). FPI uses StoveBrite Paint - Metallic Black #6309.

3) Make a periodic check of burner for proper position and condition. Visually check the flame of the burner periodically, making sure the flames are steady; not lifting or floating. If there is a problem, call a qualified service person.

4) The appliance and venting system must be inspected before use, and at least annually, by a qualified field service person, to ensure that the flow of combustion and ventilation air is not obstructed.

   During the annual service call, the burners should be removed from the burner tray and cleaned. Replace the embers but do not block the pilot.

   If you have an incorrect flame pattern, contact your FPI dealer for further instructions.

**GOLD-PLATED TRIM**

The 24 carat gold plated finish on the trim requires little maintenance, and need only be cleaned with a damp cloth. DO NOT use abrasive materials or chemical cleaners, as they may harm the finish and void the warranty.

Clean any fingerprints off before turning the unit on. If the top louvers start to discolor, check the door gasket seal and replace if necessary.

**LOG REPLACEMENT**

The unit should never be used with broken logs. Turn off the gas valve and allow the unit to cool before opening door to carefully remove the logs. The pilot light generates enough heat to burn someone. If for any reason a log should need replacement, you must use the proper replacement log. The position of these logs must be as shown in the diagram under Log Installation.

**NOTE:** Improper positioning of logs may create carbon build-up and will alter the unit’s performance which is not covered under warranty.

**GLASS GASKET**

If the glass gasket requires replacement use 7/8” flat glass gasket (Part # 936-243) for the Bay Front and for the Flush Front.
DOOR GLASS REPLACEMENT

Your Regency insert is supplied with high temperature, 5 mm Neoceram ceramic glass that will withstand the highest heat that your unit will produce. In the event that you break your glass by impact, purchase your replacement from an authorized FPI dealer only, and follow our step-by-step instructions for replacement.

WARNING: do not operate appliance with the glass front removed, cracked or broken. Replacement of the glass should be done by a licensed or qualified service person.

Flush Glass Replacement

Slide old glass out of the side frames and replace with new glass.

FAN MAINTENANCE

If your fan requires maintenance or replacement, access to the fan is through the plate on the rear wall of the firebox. NOTE: the unit MUST NOT be operated without the fan access panel securely in place.

CAUTION: Label all wires prior to disconnection when servicing controls. Wiring error can cause improper and dangerous operation.

To remove fan:

1) Turn the unit off and allow it to cool to room temperature.
2) Unplug or disconnect power source to stove.
3) Remove glass front (see page 11).
4) Remove logs.
5) Remove brick panels.
6) Remove the Grate by removing the screws on each side of the grate.
7) Remove the Burner Tray by removing the screws on each side of the tray. Push the tray to the left and lift up.
8) Remove the 12 screws holding the Access Panel in place.
9) Remove the Fan Air Duct by removing 4 screws, 2 per side.
10) Unplug the black wires from the fan motor (from inside the stove).
11) Lift Fan Assembly off of the 2 pins, tip forward and pull through firebox opening.
12) Disconnect green wire from power cord.

Replacing fan:

Reverse above steps. Hint for pushing fan down onto pins - rub a bit of dish soap on the grommet so it will slide more easily onto the pin. Check to make sure the fan is seated properly on the pins, this is very important - try to move the fan back and forth, there should be no noise, if there is check that the grommets haven't come loose.

When replacing the Burner Tray, slide the aeration adjustment rod through the opening in the front of the Valve Assembly.

To remove fan:

Remove the 2 screws holding the grate in position.
Remove the 2 screws, push Burner Tray to the left, and lift off.

2) *           Bottom Louver
3) *           Right mounting bracket
4) *           Left mounting bracket
5) *           Front Frame
Regency® Fireplace Products are designed with reliability and simplicity in mind. In addition, our internal Quality Assurance Team carefully inspects each unit thoroughly before it leaves our facility. FPI Fireplace Products International Ltd. is pleased to extend this limited lifetime warranty to the original purchaser of a Regency® Product. This warranty is not transferable.

The Warranty: Limited Lifetime
The combustion chamber, heat exchanger, burner tubes/pans, logs, glass crystals, ceramic spa stones, pebbles, brick panels and gold plating (against defective manufacture only) are covered under the Limited Lifetime Warranty for five (5) years for parts and subsidized labour* and parts only thereafter.

Glass is covered for lifetime against thermal breakage only, parts and subsidized labour* for five (5) years and parts only thereafter.

External casting, surrounds and grills are covered against cracks and warps resulting from manufacturer defects, parts and subsidized labour* for three (3) years from the date of purchase and parts only thereafter.

Special Finishes - One year on stainless steel panels, nickel overlays, nickel faceplates, brushed nickel and antique copper full screens and doors. You can expect some changes in color as the product "ages" with constant heating and cooling. FPI warranties the product for any manufacturing defects on the original product. However, the manufacturers warranty does not cover changing colors and marks, i.e. finger prints, etc applied after the purchase of the product. Damage from the use of abrasive cleaners is not covered by warranty.

Electrical and mechanical components such as blowers, switches, wiring, thermodiscs, FPI remote controls, spill switches, thermopiles, thermocouples, pilot assembly components, and gas valves are covered for two years parts and one year subsidized labour* from the date of purchase. Blowers and valves replaced under warranty are considered repairs and continue as if new with appliance, i.e. twelve (12) months from original purchase date of appliance with a minimum of three (3) months coverage from date of replacement.

FPI venting components are covered parts and subsidized labour* for three (3) years from date of purchase.

Simpson Dura-Vent venting components (Direct Vent units) are covered by Simpson Dura-Vent Inc. warranty.

Repair/replacement parts purchased by the consumer from FPI after the original coverage has expired on the unit will carry a 90 day warranty, valid with a receipt only. Any item shown to be defective will be repaired or replaced at our discretion. No labor coverage is included with these parts.

Conditions:
Any part or parts of this unit which in our judgement show evidence of such defects will be repaired or replaced at FPI’s option, through an accredited distributor or agent provided that the defective part be returned to the distributor or agent Transportation Prepaid, if requested.

Porcelain/Enamel - Absolute perfection is either guaranteed nor commercially possible. Any chips must be reported and inspected by an authorized dealer within three days of installation. Reported damage after this time will be subject to rejection.

It is the general practice of FPI to charge for larger, higher priced replacement parts and issue credit once the replaced component has been returned to FPI and evaluated for manufacturer defect.

The authorized selling dealer is responsible for all in-field service work carried out on your Regency® product. FPI will not be liable for results or costs of workmanship from unauthorized service persons or dealers.

At all times FPI reserves the right to inspect product in the field which is claimed to be defective.

All claims must be submitted to FPI by authorized selling dealers. It is essential that all submitted claims provide all of the necessary information including customer name, purchase date, serial #, type of unit, problem, and part or parts requested, without this information the warranty will be invalid.

Exclusions:
This limited Lifetime Warranty does not extend to or include paint, door or glass gasketing or trim.

At no time will FPI be liable for any consequential damages which exceed the purchase price of the unit. FPI has no obligation to enhance or modify any unit once manufactured. i.e. as products evolve, field modifications or upgrades will not be performed.

FPI will not be liable for travel costs for service work.

Installation and environmental problems are not the responsibility of the manufacturer and therefore are not covered under the terms of this warranty policy.

Embers, rockwool, gaskets, door handles and paint are not covered under the terms of this warranty policy.

Any unit which shows signs of neglect or misuse is not covered under the terms of this warranty policy.

The warranty will not extend to any part which has been tampered with or altered in any way, or in our judgment has been subject to misuse, improper installation, negligence or accident, spillage or downdrafts caused by environmental or geographical conditions, inadequate ventilation, excessive offsets, negative air pressure caused by mechanical systems such as furnaces, fans, clothes dryer, etc.

Freight damage to stoves and replacement parts is not covered by warranty and is subject to rejection by the dealer.

FPI will not be liable for acts of God, or acts of terrorism, which cause malfunction of the appliance.

Performance problems due to operator error will not be covered by this warranty policy.

Products made or provided by other manufacturers and used in conjunction with the operation of this appliance without prior authorization from FPI, may nullify your warranty on this product.

Any alteration to the unit which causes sooting or carboning that results in damage to the interior / exterior faceplate is not the responsibility of FPI.

* Subsidy according to job scale as predetermined by FPI.
