WARNING: If the information in these instructions are not followed exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

FOR YOUR SAFETY
Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

Installation and service must be performed by a qualified installer, service agency or the gas supplier.

FOR YOUR SAFETY
What to do if you smell gas:
- Do not try to light any appliance
- Do not touch any electrical switch: do not use any phone in your building.
- Immediately call your gas supplier from a neighbour’s phone. Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

Installer: Please complete the details on the back cover and leave this manual with the homeowner.

Homeowner: Please keep these instructions for future reference.
To the New Owner:

Congratulations!
You are the owner of a state-of-the-art Gas Fireplace by REGENCY®. The P48-2 has been designed to provide you with all the warmth and charm of a wood fireplace at the flick of a switch. The model P48-2 has been approved by Warnock Hersey for both safety and efficiency. As it also bears our own mark, it promises to provide you with economy, comfort and security for many trouble free years to follow. Please take a moment now to acquaint yourself with these instructions and the many features of your Regency® Fireplace.

MANUFACTURED MOBILE HOME REQUIREMENTS
INFORMATION FOR MOBILE/MANUFACTURED HOMES AFTER FIRST SALE

This Regency® product has been tested and listed by Warnock Hersey as a Direct Vent Wall Furnace to the following standards:

This Direct Vent System Appliance must be installed in accordance with the manufacturer's installation instructions and the Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280, or the current Standard of Fire Safety Criteria for Manufactured Home Installations, Sites, and Communities ANSI/NFPA 501A, and with CAN/CSA Z240-MH Mobile Home Standard in Canada.

This appliance installation must comply with the manufacturer's installation instructions and local codes, if any. In the absence of local codes follow the current National Fuel Gas Code, ANSI Z223.1 and the current National Electrical Code ANSI/NFPA 70 in the U.S.A., and the current CAN/CGA B149 Gas Installation Code and the current Canadian Electrical Code CSA C22.1 in Canada.

This appliance comes equipped with a dedicated #8 Ground Lug for attachment of the ground wire to the steel chassis as applicable to local codes.

The appliance, when installed, must be electrically grounded in accordance with local codes or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70, or the Canadian Electrical Code, CSA C22.1.

This appliance may only be installed in an aftermarket permanently located, manufactured (U.S.A only) or mobile home, where not prohibited by local codes.

This appliance can only be used with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases, unless a certified kit is used.

Ensure that structural members are not cut or weakened during installation.

We recommend that our products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) or in Canada by Wood Energy Technical Training (WETT).

WARRANTY
Warranty .....................................................................51
For the State of Massachusetts, installation and repair must be done by a plumber or gasfitter licensed in the Commonwealth of Massachusetts.

For the State of Massachusetts, flexible connectors shall not exceed 36 inches in length.

For the State of Massachusetts, the appliances individual manual shut-off must be a t-handle type valve.

The State of Massachusetts requires the installation of a carbon monoxide alarm in accordance with NFPA 720 and a CO alarm with battery back up in the same room where the gas appliance is installed.

NOTE: Regency® units are constantly being improved. Check the label on the unit and if there is a difference, the label on the unit is the correct one.

This is a copy of the label that accompanies each P48-NG2 and P48-LP2 Zero Clearance Direct Vent Gas Fireplace. We have printed a copy of the contents here for your review. The safety label is located on the front inside base of the unit, visible when the bottom louver is open.

SAFETY LABEL
5.08: Modifications to NFPA-54, Chapter 10

(2) Revise 10.8.3 by adding the following additional requirements:

(a) For all side wall horizontally vented gas fueled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes, including those owned or operated by the Commonwealth and where the side wall exhaust vent termination is less than seven (7) feet above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied:

1. INSTALLATION OF CARBON MONOXIDE DETECTORS. At the time of installation of the side wall horizontal vented gas fueled equipment, the installing plumber or gasfitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed. In addition, the installing plumber or gasfitter shall observe that a battery operated or hard wired carbon monoxide detector with an alarm is installed on each additional level of the dwelling, building or structure served by the side wall horizontal vented gas fueled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard wired carbon monoxide detectors.

a. In the event that the side wall horizontally vented gas fueled equipment is installed in a crawl space or an attic, the hard wired carbon monoxide detector with alarm and battery back-up may be installed on the next adjacent floor level.

b. In the event that the requirements of this subdivision can not be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.

2. APPROVED CARBON MONOXIDE DETECTORS. Each carbon monoxide detector as required in accordance with the above provisions shall comply with NFPA 720 and be ANSI/UL 2034 listed and IAS certified.

3. SIGNAGE. A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print size no less than one-half (1/2) inch in size, "GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL OBSTRUCTIONS".

4. INSPECTION. The state or local gas inspector of the side wall horizontally vented gas fueled equipment shall not approve the installation unless, upon inspection, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CMR 5.08(2)(a)1 through 4.

(b) EXEMPTIONS: The following equipment is exempt from 248 CMR 5.08(2)(a)1 through 4:

1. The equipment listed in Chapter 10 entitled "Equipment Not Required To Be Vented" in the most current edition of NFPA 54 as adopted by the Board; and

2. Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

(c) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM PROVIDED. When the manufacturer of Product Approved side wall horizontally vented gas equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for installation of the equipment and the venting system shall include:

1. Detailed instructions for the installation of the venting system design or the venting system components; and

2. A complete parts list for the venting system design or venting system.

(d) MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM NOT PROVIDED. When the manufacturer of a Product Approved side wall horizontally vented gas fueled equipment does not provide the parts for venting the flue gases, but identifies "special venting systems", the following requirements shall be satisfied by the manufacturer:

1. The referenced "special venting system" instructions shall be included with the appliance or equipment installation instructions; and

2. The "special venting systems" shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

(e) A copy of all installation instructions for all Product Approved side wall horizontally vented gas fueled equipment, all venting instructions, all parts lists for venting instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation.
IMPORTANT MESSAGE  
SAVE THESE INSTRUCTIONS

The P48-NG2/P48-LP2 Direct Vent Fireplace must be installed in accordance with these instructions. Carefully read all the instructions in this manual first. Consult the “authority having jurisdiction” to determine the need for a permit prior to starting the installation. It is the responsibility of the installer to ensure this fireplace is installed in compliance with manufacturers instructions and all applicable codes.

BEFORE YOU START

Safe installation and operation of this appliance requires common sense, however, we are required by the Canadian Safety Standards and ANSI Standards to make you aware of the following:

INSTALLATION AND REPAIR SHOULD BE DONE BY AN AUTHORIZED SERVICE PERSON. THE APPLIANCE SHOULD BE INSPECTED BEFORE USE AND AT LEAST ANNUALLY BY A PROFESSIONAL SERVICE PERSON. MORE FREQUENT CLEANING MAY BE REQUIRED DUE TO EXCESSIVE LINT FROM CARPETING, BEDDING MATERIAL, ETC. IT IS IMPERATIVE THAT CONTROL COMPARTMENTS, BURNERS AND CIRCULATING AIR PASSAGEWAYS OF THE APPLIANCE BE KEPT CLEAN.

DUE TO HIGH TEMPERATURES, THE APPLIANCE SHOULD BE LOCATED OUT OF TRAFFIC AND AWAY FROM FURNITURE AND DRAPERIES.

WARNING: FAILURE TO INSTALL THIS APPLIANCE CORRECTLY WILL VOID YOUR WARRANTY AND MAY CAUSE A SERIOUS HOUSE FIRE.

CHILDREN AND ADULTS SHOULD BE ALERTED TO THE HAZARDS OF HIGH SURFACE TEMPERATURES, ESPECIALLY THE FIREPLACE GLASS, AND SHOULD STAY AWAY TO AVOID BURNS OR CLOTHING IGNITION.

GENERAL SAFETY INFORMATION

1) The appliance installation must conform with local codes or, in the absence of local codes, with the current Canadian or National Gas Codes, CAN1-B149 or ANSI Z223.1 Installation Codes.

2) The appliance when installed, must be electrically grounded in accordance with local codes, or in the absence of local codes with the current National Electrical Code, ANSI/NFPA 70 or CSA C22.1 Canadian Electrical Code.

3) See general construction and assembly instructions. The appliance and vent should be enclosed.

4) This appliance must be connected to the specified vent and termination cap to the outside of the building envelope. Never vent to another room or inside a building. Make sure that the vent is fitted as per Venting instructions.

5) Inspect the venting system annually for blockage and any signs of deterioration.

6) Venting terminals shall not be recessed into a wall or siding.

7) Any safety glass removed for servicing must be replaced prior to operating the appliance.

8) To prevent injury, do not allow anyone who is unfamiliar with the operation to use the fireplace.

9) Wear gloves and safety glasses for protection while doing required maintenance.

10) Be aware of electrical wiring locations in walls and ceilings when cutting holes for termination.

11) Under no circumstances should this appliance be modified. Parts that have to be removed for servicing should be replaced prior to operating this appliance.

12) Installation and any repairs to this appliance should be done by an authorized service person. A professional service person should be called to inspect this appliance annually. Make it a practice to have all of your gas appliances checked annually.

13) Do not slam shut or strike the glass door.

14) Under no circumstances should any solid fuels (wood, paper, cardboard, coal, etc.) be used in this appliance.

15) The appliance area must be kept clear and free of combustible materials, (gases and other flammable vapours and liquids).

Emissions from burning wood or gas could contain chemicals known to the State of California to cause cancer, birth defects or other reproductive harm.

INSTALLATION CHECKLIST

1) Locate appliance  
   a) Room location (Refer to “Locating Your Gas fireplace” section)  
   b) Clearances to Combustibles (Refer to “Clearances” section)  
   c) Mantle Clearances (Refer to “Combustible Mantel Clearances” section)  
   d) Framing & Finishing Requirements (Refer to “Framing & Finishing” section)  
   e) Venting Requirements (Refer to “Venting” section)

2) Assemble Top Standoffs and Top Facing Support and Side Nailing Strips (Refer to “Unit Assembly Prior to Installation). NOTE: Must be done before installing unit into place.

3) Install vent (Refer to “Venting Arrangement” sections).

4) Make gas and electrical connections. Test the pilot. Must be as per diagram (Refer to “Pilot Adjustment” section).

   Convert to propane if desired (Refer to “Conversion from NG to LPG” section).

5) Test Gas Pressure. (Refer to “Gas Pipe Pressure Testing” section)
6) Install standard and optional features. Refer to the following sections:
   a) Brick Panels Installation
   b) Log Set Installation
   c) Standard Flush Door
   d) Flush Louvers
   e) Flush Trim
   f) Bay Door
   g) Bay Trim
   h) Bay Louvers
   i) Finishing trim
   j) Double Screen Door
   k) Remote Control
   l) Wall Switch
   m) Wall Thermostat
   n) Installing the Fan

11) Final check.

Before leaving this unit with the customer, the installer must ensure that the appliance is firing correctly and operation fully explained to customer.

This includes:

1) Clocking the appliance to ensure the correct firing rate (rate noted on label 51,000 (NG) Btu/h, 48,000 (LP) Btu/h) after burning appliance for 15 minutes.

2) If required, adjusting the primary air to ensure that the flame does not carbon. First allow the unit to burn for 15-20 min. to stabilize.

CAUTION: Any alteration to the product that causes sooting or carboning that results in damage is not the responsibility of the manufacturer.

MANUFACTURED MOBILE HOME ADDITIONAL REQUIREMENTS

1) Ensure that structural members are not cut or weakened during installation.

2) Ensure proper grounding using the #8 ground lug provided. See “Wiring Diagram” section.

5) This appliance is Listed for bedroom installations when used with a Listed Millivolt Thermostat. Some areas may have further requirements, check local codes before installation.

6) The P48-2 Direct Vent Gas Fireplace is approved for alcove installations, which meet the clearances listed on this page.

7) We recommend that you plan your installation on paper using exact measurements for clearances and floor protection before actually installing this appliance. Have an authorized inspector, dealer, or installer review your plans before installation.

Note: For vent terminations see “Exterior Vent Termination Locations” section.

HEATWAVE OPTIONAL DUCT SYSTEM KIT

#946-556

The HeatWave Air Duct Kit increases the effectiveness of your fireplace by dispersing warm air from the fireplace to remote locations in the same room or other rooms in your home. Up to two kits may be installed on the fireplace. Please Note: Only 1 HeatWave kit may be operated at one time. This includes the internal blower option as well.

OPTIONAL HEAT RELEASE KIT

#946-570

The Heat Release Kit expels warm air from the fireplace to the outside of the building, allowing the fireplace to be operated with less heat entering the room. The kit may be used on either the left or right side.

HEARTH

A hearth is not mandatory, but is recommended for aesthetics and for added safety.
CLEARANCES

The clearances listed below are Minimum distances unless otherwise stated:

A major cause of chimney related fires is failure to maintain required clearances (air space) to combustible materials. It is of the greatest importance that this fireplace and vent system be installed only in accordance with these instructions.

**Clearance to Combustibles from:**
- Back 0" (0mm)
- Side 0" (0mm)
- Floor 0" (0mm)

**Minimum Clearance from Top of Front Facing:**
- Mantel min. 8" (203mm)
- Ceiling 39" (990mm) from top of front facing above louvers.

**Side Wall:**
- 6" (152mm)

**Horizontal Vent Clearances:**
- Top 2-1/2" (64mm)
- Side 1-1/2" (38mm)
- Bottom 1-1/2" (38mm)

**Vertical Vent Clearances:**
- 1-1/4" (32mm)

**Alcove Clearances:**
- Max. Depth 36" (914mm)
- Min. Width 60" (1524mm)
- Min. Height 80" (2032mm)

---

**Caution Requirements**

The top, back and sides of the fireplace are defined by standoffs. The metal ends of the standoff may NOT be recessed into combustible construction.

---

**WARNING**

Fire hazard is an extreme risk if these clearances (air space) to combustible materials are not adhered to. It is of greatest importance that this fireplace and vent system be installed only in accordance with these instructions.

---

The HeatWave Duct Kit and the Heat Release Kit have different clearance and framing requirements, check the HeatWave and Heat Release manual for details.
MANTELS

Because of the extreme heat this fireplace emits, the mantel clearances are critical. Combustible mantel clearances from louver are shown in the diagram below.

Note: A non-combustible mantel may be installed at a lower height if the framing is made of metal studs covered with a non-combustible board.

This drawing is to scale at 1:6 (one inch = 6 inches)

Mantel can be installed anywhere in shaded area using the above scale for units with the Flush Front and with the optional Bay Front.

Note: Ensure the paint that is used on the mantel and the facing is "heat resistant" or the paint may discolour.

MANTEL LEG CLEARANCES

Combustible mantel leg clearances as per diagram:

Maximum 1-1/2" projection at 3" minimum clearance.

Allowable mantel leg projection.
1) Determine the total thickness of facing material (e.g., drywall plus ceramic tiles) to allow the finished surface to be flush with the front of the unit. Total facing thickness can vary from 1/2” (13mm) to 1-1/4” (32mm) thick.

2) Frame in the enclosure for the unit with framing material. The framed opening for the assembled kit is 47-1/2” high x 48-1/2” wide x 26-1/4” deep (1207mm H x 1232mm W x 667mm D). See Diagram 1. See important note below when installing with any vertical venting off of the top.

3) For exterior walls, insulate the enclosure to the same degree as the rest of the house, apply vapour barrier and drywall, as per local installation codes. (Do not insulate the fireplace itself.)

4) The unit does not have to be completely enclosed in a chase. The clearance on top of the unit from the top standoffs is 0” so combustible building materials can be laid directly on top of the standoffs. You must maintain clearances from the vent to combustible materials: See “Clearances” section. Combustible materials can be laid against the side and back standoffs and the stove base.

**IMPORTANT**
When installing the unit with any vertical venting off the top of the unit as shown, the minimum framing depth changes accordingly.

The HeatWave Duct Kit has different clearance and framing requirements, check the HeatWave manual for details.
UNIT ASSEMBLY PRIOR TO INSTALLATION

The Top Facing Support, the Side Nailing Strips and the 2 Top Standoffs must be correctly positioned and attached to the top before unit is slipped into position.

TOP STANDOFF ASSEMBLY

The top standoffs are shipped in a flat position and must be folded into shape and attached.

1) Remove the standoffs from the fireplace top.

2) Take each standoff and bend into the correct shape. Bend up at the bend lines until the screw holes in the standoff and the pre-punched screw holes on the fireplace top line up.

3) Attach the standoff securely to the top with 2 screws per standoff (on opposite corners).

TOP FACING SUPPORT AND SIDE NAILING STRIPS

Determine the total thickness of facing material (e.g. drywall plus ceramic tiles) to allow the finished surface to be flush with the front of the unit. Total facing thickness can vary from 1/2" (13mm) to 1-1/4" (32mm) thick.

The Top Facing Support & Side Nailing Strips can be mounted in 3 different positions depending on the thickness of the facing material.

<table>
<thead>
<tr>
<th>Screw Position</th>
<th>Facing Material Depth</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>1/2&quot; / 13mm</td>
</tr>
<tr>
<td>B</td>
<td>7/8&quot; / 22mm</td>
</tr>
<tr>
<td>C*</td>
<td>1-1/4&quot; / 32mm</td>
</tr>
</tbody>
</table>

* For "C" screw position the top facing support is reversed.

1) Mount Top Facing Support using the 3 supplied screws into the three pre-punched screw holes on the top front of the unit. Use hole positions A, B, or C depending on your facing depth.

2) Use the same screw hole position for the Side Nailing Strips as was used for the Top Facing Support. Attach each side nailing strip using 3 screws.

VENTING INTRODUCTION

The P48-2 uses the "balanced flue" technology CoAxial system. The inner liner vents products of combustion to the outside while the outer liner draws outside combustion air into the combustion chamber thereby eliminating the need to use heated room air for combustion and losing warm room air up the chimney.

Note: These flue pipes must not be connected to any other appliance.

The gas appliance and vent system must be vented directly to the outside of the building, and never be attached to a chimney serving a separate solid fuel or gas burning appliance. Each direct vent gas appliance must use it's own separate vent system. Common vent systems are prohibited.

</tr>
</tbody>
</table>

* Clearance in accordance with local installation codes and the requirements of the gas supplier

¹ In accordance with current CSA B149.1, Natural Gas and Propane Installation Code
² In accordance with the current ANSI Z223.1/NFPA 54, National Fuel Gas Code
³ A vent shall not terminate directly above a sidewalk or paved driveway which is located between two single family dwellings and serves both dwellings
† Permitted only if veranda, porch, deck, or balcony is fully open on a minimum of two sides beneath the floor

---

1. 3 feet (91cm) within a height of 15 feet (4.5m) above the meter / regulator assembly
2. 3 feet (91cm) above - if within 10 feet (3m) horizontally
VENTING ARRANGEMENTS

HORIZONTAL TERMINATION

Regency® Direct Vent System (Flex)

These venting systems, in combination with the P48-2 Direct Vent Gas Fireplace, have been tested and listed as a direct vent heater system by Warnock Hersey. The location of the termination cap must conform to the requirements in the Vent Terminal Locations diagram in “Exterior Vent Termination Locations” section.

Regency® Direct Vent (Flex) System Termination Kit (Part# 946-618) includes all the parts needed to install the P48-2 with a maximum run of 4 feet.

1) 8” dia. flexible liner (6 ft. length)
2) 5” dia. flexible liner (6 ft. length)
3) spring spacers (4)
4) thimble (2)
5) AstroCap XL termination cap (1)
6) screws (12)
7) tube of Mill Pac (1)
8) plated screws (8)
9) screws #8 x 1-1/2” Drill Point, Stainless Steel (4)
10) vinyl siding standoff

If longer runs are needed, the Regency® Direct Vent system (Flex) Part# 946-616 includes all the parts needed to install the P48-2 with a maximum 10’ run.

1) 8” dia. flexible liner (10 ft. length)
2) 5” dia. flexible liner (10 ft. length)
3) spring spacers (7)
4) thimble (2)
5) AstroCap XL termination cap (1)
6) screws (12)
7) tube of Mill Pac (1)
8) plated screws (8)
9) screws #8 x 1-1/2” Drill Point, Stainless Steel (4)
10) vinyl siding standoff

Notes:

1) Liner sections should be continuous without any joints or seams.

2) Only Flex pipe purchased from Regency® may be used for Flex installations.

3) If you are installing the P48-2 into a Regency® Mantel Kit, use the minimum horizontal vent height (centre-line of 43”). Remember to include the mantel base in your calculations and to maintain the 2-1/2” clearance to the underside of the mantel top.
The Simpson Dura-Vent Direct Vent System offers a complete line of component parts for installation of both horizontal and vertical installations. Many items are offered in decorative black, as well as galvanized finish. We recommend using the galvanized finish for installation with the P48-2.

The minimum components required for a basic horizontal termination are:

- 1 Horizontal Termination Cap
- 1 45° Elbow
- 1 Flue Adaptor
- 1 Wall Thimble
- 1 Length of pipe to suit wall thickness (see chart)

Wall thickness is measured from the back standoffs to the inside mounting surface of termination cap. For siding other than vinyl furring strips may be used, instead of the vinyl siding standoff, to create a level surface to mount the vent terminal. The Terminal must not be recessed into siding. Measure the wall thickness including furring strips.

If a Vinyl Siding Standoff is required (it must be used with vinyl siding), measure to outside surface of wall without siding and add 2 inches.

### Alternate Horizontal Termination Caps

#### Alternate Snorkel Termination Cap

### Flat Wall Installation

For specific instructions on venting components - visit the manufacturers website listed below.

- Simpson Direct Vent Pro: www.duravent.com
- Selkirk Direct-Temp: www.selkirkcorp.com
- Metal-Fab Sure Seal: www.mtfab.com
- Industrial Chimney Company: www.icc-rsf.com

**Note:** Horizontal runs of vent must be level, or have a 1/4” rise for every 1 foot of run towards the termination. Never allow the vent to run downward - this could cause high temperatures and may present a possible fire hazard.

---

### L676 & L900 DIRECT VENT FIREPLACE

**IMPORTANT NOTE**

- A Vent Guard is **required** when the AstroCap is installed above grade at 7 feet or lower.
- The Simpson Dura-Vent and Selkirk Direct Temp horizontal termination caps **cannot** be used in any applications.
- Only the AstroCap XL and Snorkels are certified for horizontal terminations.
SIMPSON DURA-VENT DIRECT VENT SYSTEM and
Regency® DIRECT VENT SYSTEM (FLEX)
(Propane & Natural Gas)

The diagram shows all allowable combinations of vertical runs with horizontal terminations, using one 45° and one 90° elbow (two 45° elbows equal one 90° elbow).

Note: Must use optional rigid pipe adapter (Part # 770-994) when using Simpson Dura-Vent pipe (Refer to "Simpson Dura-Vent Venting" section).

Simpson Dura-Vent
5" inner diameter
8" outer diameter

Regency® Flex Vent
5" inner diameter
8" outer diameter

A vent guard should be used whenever the termination is lower than the specified minimum or as per local codes.

Note: Regency® Direct Vent System (Flex) is only approved for horizontal terminations.

- Maintain clearances to combustibles as listed in "Clearances" section
- Horizontal vent must be supported every 3 feet.
- Firestops are required at each floor level and whenever passing through a wall.
Horizontal Venting with Two (2) 90° Elbows

One 90° elbow = Two 45° elbows.

<table>
<thead>
<tr>

VENTING ARRANGEMENTS

VERTICAL TERMINATIONS

SIMPSON DURA-VENT DIRECT VENT SYSTEM

(Propane & Natural Gas)

The shaded area in the diagram shows all allowable combinations of straight vertical and offset to vertical terminations, using one 90° elbow and one 45° elbow, with Simpson Dura-Vent Direct Vent vent systems for Propane and Natural Gas.

- Vent must be supported at offsets.
- Firestops are required at each floor level and whenever passing through a wall.
- Maintain clearances to combustibles.

Note: Must use optional rigid pipe adapter when using Simpson Dura-Vent pipe (Part # 510-994).
The P48-2 is approved for a maximum 40 ft. straight vertical, with Simpson Dura-Vent Direct Vent vent systems for Propane and Natural Gas, as per diagram.

The shaded area in the diagram shows all allowable combinations of straight vertical and offset to vertical terminations with Simpson Dura-Vent Direct Vent vent systems for Propane and Natural Gas. Maximum two 45° elbows allowed.

- Vent must be supported at offsets
- Firestops are required at each floor level and whenever passing through a wall.
- Maintain clearances to combustibles as listed in the "Clearances" section.
UNIT INSTALLATION
WITH HORIZONTAL TERMINATION

Install the vent system according to the manufacturer's instructions included with the components.

1) Set the unit in its desired location. Check to determine if wall studs or roof rafters are in the way when the venting system is attached. If this is the case, you may want to adjust the location of the unit. Rough in the gas preferably on the right side of the unit and the electrical (junction block is on the left side) on the left.

2) Direct Vent pipe and fittings are designed with special twist-lock connections to connect the venting system to the appliance flue outlet. A twist-lock appliance adaptor is an available option that must be used in conjunction with the Simpson Dura-Vent Direct Vent system. Install the adaptor after the unit is set in its desired location otherwise the unit will not fit through the 36-5/8" (930mm) high frame opening.

3) Put a bead of silicone inside the outer section of the adapter and a bead of Stove Mate on the inner collar. Slip the adapter over the existing inner and outer flue collar and fasten to the outer collar only with the twist-lock for a solid connection.

4) Assemble the desired combination of pipe and elbows to the appliance adaptor and twist-lock for a solid connection.

Note:
   a) Twist-lock procedure: Four indentations, located on the female ends of pipes and fittings, are designed to slide straight onto the male ends of adjacent pipes and fittings, by orienting the four pipe indentations so they match and slide into the four entry slots on the male ends. (Diagram 1) Push the pipe sections completely together, then twist-lock one section clockwise approximately one-quarter turn, until the two sections are fully locked. The female locking lugs will not be visible from the outside, on the Black Pipe or fittings. They may be located by examining the inside of the female ends.

   b) Horizontal runs of vent must be supported every 3 feet (0.9meter). Wall straps are available for this purpose.

5) Mark the wall for a 11" x 11" (279mm x 279mm) square hole. The center of the square hole should line up with the centerline of the horizontal pipe. Cut and frame the 11 inch (279mm) square hole in the exterior wall where the vent will be terminated.

   If the wall being penetrated is constructed of non-combustible material, i.e. masonry block or concrete, a 8" (203mm) diameter hole is acceptable.

   Note: For best results and optimum performance with each approved venting system, it is highly recommended to apply “Mill-Pac” sealant (supplied) to every inner pipe connection. Failure to do so may result in drafting or performance issues not covered under warranty. Silicone (red RTV) is optional.

6) The horizontal run of vent must be level, a 1/4 inch rise for every 1 foot run towards the termination. Never allow the vent to run downward. This could cause high temperatures and may present the possibility of a fire.

   The arrow on the vent cap should be pointing up. Insure that the 1-1/4"(32mm) clearances to combustible materials are maintained (Diagram 5). Install the termination cap.

Note:
   a) The horizontal run of vent must be level, or have a 1/4 inch rise for every 1 foot of run towards the termination. Never allow the vent to run downward. This could cause high temperatures and may present the possibility of a fire.

   b) The location of the horizontal vent termination on an exterior wall must meet all local and national building codes, and must not be blocked or obstructed. For External Vent Terminal Locations, see diagram in “Exterior Vent Termination Locations” section.

   6) The arrow on the vent cap should be pointing up. Insure that the 1-1/4"(32mm) clearances to combustible materials are maintained (Diagram 5). Install the termination cap.

   Note: If installing termination on a siding covered wall, a vinyl siding standoff or furring strips must be used to ensure that the termination is not recessed into the siding.

7) Before connecting the horizontal run of vent pipe to the vent termination, slide the Wall Thimble (Part # 1247) over the vent pipe.

8) Slide the appliance and vent assembly towards the wall carefully inserting the vent pipe into the vent cap assembly. It is important that the vent extends into the vent cap sufficient distance so as to result in a minimum pipe overlap of 1-1/4 inches (32mm). Secure the connection between the vent pipe and the vent cap by attaching the two sheet metal strips extending from the vent cap assembly into the outer wall of the vent pipe. Use the two sheet metal screws provided to connect the strips to the pipe section. See Diagram 6.

9) Install wall thimble in the center of the 11" (279mm) square and attach with wood screws (Diagram 7).
UNIT INSTALLATION WITH VERTICAL TERMINATION

1) Maintain the 1-1/4" (32mm) clearances (air spaces) to combustibles when passing through ceilings, walls, roofs, enclosures, attic rafter, or other nearby combustible surfaces. Do not pack air spaces with insulation. Check "Venting Arrangement - Vertical Termination" section for the maximum vertical rise of the venting system and the maximum horizontal offset limitations.

2) Set the gas appliance in its desired location. Drop a plumb bob down from the ceiling to the position of the appliance flue exit, and mark the location where the vent will penetrate the ceiling. Drill a small hole at this point. Next, drop a plumb bob from the roof to the hole previously drilled in the ceiling, and mark the spot where the vent will penetrate the ceiling joists, roof rafters or other framing to obstruct the venting system. You may wish to relocate the appliance or to offset, as shown in Diagram 2 to avoid cutting load bearing members.

3) A Firestop spacer must be installed in the floor or ceiling of every level. To install the Firestop spacer in a flat ceiling or wall, cut a 11 inch (279mm) square hole. Frame the hole as shown in Diagram 3 and install the firestop.

4) Assemble the desired lengths of pipe and elbows. Ensure that all pipes and elbow connections are in the fully twist-locked position and sealed.

**NOTE:**
For best results and optimum performance with each approved venting system, it is highly recommended to apply “Mill-Pac” sealant (supplied) to every inner pipe connection. Failure to do so may result in drafting or performance issues not covered under warranty. Silicone (red RTV) is optional.

5) Cut a hole in the roof centered on the small drilled hole placed in the roof in Step 2. The hole should be of sufficient size to meet the minimum requirements for clearance to combustibles of 1-1/4"(32mm). Slip the flashing under the shingles (shingles should overlap half the flashing) as per Diagram 4.

6) Continue to assemble pipe lengths.

**Note:**
If an offset is necessary in the attic to avoid obstructions, it is important to support the vent pipe every 3 feet (0.9 meter), to avoid excessive stress on the elbows, and possible separation. Wall straps are available for this purpose (Diagram 2).

Galvanized pipe is desirable above the roofline due to its higher corrosion resistance. Continue to add pipe sections through the flashing until the height of the vent cap meets the minimum height requirements specified in Diagram 5 or local codes. Note that for steep roof pitches, the vertical height must be increased.

7) Ensure vent is vertical and secure the base of the flashing to the roof with roofing rails, slide storm collar over the pipe section and seal with a mastic.

8) Install the vertical termination cap by twist-locking it.

**Note:** Any closets or storage spaces, which the vent passes through must be enclosed.

---

</table>

---

A poor draft, or down drafting can result from high wind conditions near big trees or adjoining roof lines, in these cases, increasing the vent height may solve the problem.
UNIT INSTALLATION with Regency® Direct Vent System (Flex)

1) Locate the unit in the framing, rough in the gas (preferably on the right side of the unit) and the electrical (Junction block is on the left side) on the left. Locate the centerline of the termination and mark wall accordingly. Cut a 11”(279mm) hole in the wall (inside dimension).

Note: A top clearance of 2-1/2”(64mm) and side & bottom clearance of 1-1/2”(38mm) must be maintained except that only a 11”(25mm) clearance is needed at the termination end. We recommend framing a 11”(279mm) x 11”(279mm) (inside dimensions) hole to give structural rigidity for mounting the termination.

2) Level the fireplace and fasten it to the framing using nails or screws through the nailing strips.

3) Assemble the vent assembly by applying Mill Pac to the 5”(127mm) inner collar of the terminal and slipping the 5”(127mm) liner over it at least 1-3/8” (35mm). Fasten with the 3 screws (drilling pilot holes will make this easier). Apply Mill Pac or high temperature silicone to the 8”(203mm) flex pipe and slip it over the 8” outer collar of the vent terminal at least 1-3/8”(35mm) and fasten with the 3 screws.

4) Separate the 2 halves of the wall thimble and securely fasten the one with the tabs to the outside wall making sure that the tabs are on top and bottom. Fasten the other thimble half to the inside wall. The thimble halves slip inside each other and can be adjusted for 2 x 4 or 2 x 6 walls. The liners must slip over the collars a minimum of 1-3/8”.

5) Slip the assembled liner and termination assembly through the thimble making sure the termination cap faces up (there are markings on the cap that show which way is up). This will position the termination cap with proper down slope for draining water. Fasten the cap to the outer wall with the 4 supplied screws.

6) Pull the centre 5”(127mm) liner and outer 8”(203mm) liner out enough to slip over the flue collars of the fireplace. (You may wish to cut the liner shorter to make it more workable.) Do not bend liner more than 90°.

7) Apply Mill Pac over the fireplace inner collar and slip the 5”(127mm) liner down over it and attach with 3 supplied screws.

8) Do the same with the 8”(203mm) liner.

9) Apply a bead of silicone between the thimble and termination and around the outer edge of the terminal at the wall in order to keep the water out.

IMPORTANT: Do not locate termination hood where excessive snow or ice buildup may occur. Be sure to check vent termination area after snow falls, and clear to prevent accidental blockage of venting system. When using snow blowers, make sure snow is not directed towards vent termination area.
INSTALLATION

P48-NG2 SYSTEM DATA

For 0 to 4500 feet altitude
Burner Inlet Orifice Sizes: #27
Max. Input Rating 51,000 Btu/h
Min. Input Rating 29,000 Btu/h
Supply Pressure min.5.0” w.c.
Manifold Pressure (High) 3.8”+/- 0.2” w.c.
Log Set: Ceramic fibre, 8 per set.
Vent System: Simpson Dura-Vent Direct Vent System, Regency® Flex Kit

P48-LP2 SYSTEM DATA

Conversion Kit# 372-969
For 0 to 4500 feet altitude
Burner Inlet Orifice Sizes: #47
Max. Input Rating 48,000 Btu/h
Min. Input Rating 26,000 Btu/h
Supply Pressure min.12.0” w.c.
Manifold Pressure (High) 11”+/- 0.2” w.c.
Log Set: Ceramic fibre, 8 per set.
Vent System: Simpson Dura-Vent Direct Vent System, Regency® Flex Kit

HIGH ELEVATION

This unit is approved in Canada for altitude 0 to 4500 ft. (CAN1 2.17-M91).

GAS LINE INSTALLATION

The gas line can be brought through either the right, the left side or the bottom of the appliance. The gas valve is situated on the bottom of the unit.

The gas line connection may be made of rigid pipe, copper pipe or an approved flex connector. (If you are using rigid pipe, ensure that the valve can be removed for servicing.) Since some municipalities have additional local codes it is always best to consult with your local authorities and the CAN/CGA B149 installation code.

For USA installations follow local codes and/or the current National Fuel Gas Code, ANSI Z223.1.

When using copper or flex connectors use only approved fittings. Always provide a union so that gas lines can be easily disconnected for servicing. Flare nuts for copper lines and flex connectors are usually considered to meet this requirement.

Important: Always check for gas leaks with a soap and water solution or gas leak detector. Do not use open flame for leak testing.

Note: To properly check gas pressure, both inlet and manifold pressures should be checked using the valve pressure ports on the valve.

1) Make sure the valve is in the “OFF” position.
2) Loosen the “IN” and/or “OUT” pressure tap(s), turning counterclockwise with a 1/8” wide flat screwdriver.
3) Attach manometer to “IN” and/or “OUT” pressure tap(s) using a 5/16” ID hose.
4) Light the pilot and turn the valve to “ON” position.
5) The pressure check should be carried out with the unit burning and the setting should be within the limits specified on the safety label.
6) When finished reading manometer, turn off the gas valve, disconnect the hose and tighten the screw (clockwise) with a 1/8” flat screwdriver. Note: Screw should be snug, but do not over tighten.

S.I.T. VALVE DESCRIPTION

1) Gas on/off knob
2) Manual high/low adjustment
3) Pilot Adjustment
4) Thermocouple Connection - option
5) Outlet Pressure Tap
6) Inlet Pressure Tap
7) Pilot Outlet
8) Main Gas Outlet
9) Alternative TC Connection Point

GAS PIPE PRESSURE TESTING

The appliance must be isolated from the gas supply piping system by closing its individual manual shut-off valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psig. (3.45 kPa). Disconnect piping from valve at pressures over 1/2 psig.
CONVERSION KIT FROM NG TO LPG PART #372-969
for P48-2 SIT 820 NOVA Gas Valve

THIS CONVERSION MUST BE DONE BY A QUALIFIED GAS FITTER
IF IN DOUBT DO NOT DO THIS CONVERSION !!

Each Kit contains one LPG Conversion Kit and one DC Sparker Kit.

LPG Conversion Kit Contains:

Installation of LPG Conversion Kit:

1) Remove the louvers and trim kit. Remove the front door.
2) Remove the logs, embers.
3) Remove the grate by lifting straight up.
4) Remove the burner assembly by removing the 1 Phillips head screw and then slide the burner assembly away from the orifice and lift out.
5) Pull off the pilot cap to expose the pilot orifice.
6) Unscrew the pilot orifice with the allen key and replace with the LP pilot orifice in the kit and replace pilot cap.
7) Remove burner orifice with a 1/2" wrench and discard. Use another wrench to hold on to the elbow behind the orifice.
8) Reinstall new burner orifice LP stamped #47 and tighten.
9) Turn control knob to the "OFF" position.
10) Remove the black protection cap by hand from the high-low knob (Fig.1).
11) Insert a 5/32" or 4mm Allen wrench into the hexagonal key-way of the screw (Fig. 2), rotate it counter-clockwise until it is free and extract it.

12) Check that the screw is clean and if necessary remove dirt.

13) Flip the screw (Fig. 3).

14) Using the Allen wrench as shown in Fig. 4, rotate the screw clockwise until snug, do not overtighten.

15) Verify that if the conversion is from NG to LPG, the screw must be re-assembled with the red o-ring visible (Fig. 5).

16) Re-assemble the black protection cap (Fig. 6).

17) Reverse steps 4) to 1).

18) Attach the label "This unit has been converted to LPG" near or on top of the serial # decal.

19) Replace yellow "Natural Gas" label with red "Propane" label.

20) Check for gas leaks.

21) Check inlet and outlet pressures.

22) Check operation of flame control.

23) Check for proper flame appearance and glow on logs.

24) Locate the Piezo Ignitor situated at the side of the valve.

25) Remove the Piezo Ignitor by unscrewing the nut at the back of the mounting bracket.

26) Disconnect the ignitor wire from the Piezo Ignitor and connect it to the DC Sparker.

27) Connect the DC spark generator wires to the SIT Valve with the screw, which is provided in the kit.

**WARNING!**
Do not overtighten the screw. Recommended to grip the wrench by the short side.

**WARNING!**
Also check that the pilot and main burner injectors are appropriate for the gas type.
28) Locate the ground lug at the receptical box, left of the unit.

29) Connect one end of the supplied green ground wire to the lug with the nut and washer from the kit.

30) Install the 1/2" bushing to the heat shield.

31) Run the other end of the ground wire and DC spark generator wires through the bushing on the heat shield.

32) Plug the DC spark generator wires to the DC Sparker.

33) Connect the ground wire to the DC Sparker mounting bracket.

34) Install the supplied battery into the DC Sparker Box by opening the battery compartment.

**NOTE:** The battery in the DC Sparker Box will need to be replaced annually.

35) Mount the heat shield to the DC Sparker. Secure into place with the velcro, which is provided in the kit.

36) Find a location which is not too hot and is easy to reach for changing the battery. **Note:** It should be kept away from the chain.

37) Tie up the loose wire with the wire clip.
1) Unhook the 2 spring loaded hooks from the bottom of the flush door and lift the Flush Front off the unit.

2) Unwrap the brick pattern panels from the protective wrapping.

Note: The logs must not be in the unit.

   a) Loosen the two screws from the bottom of the baffle plate. Install the bottom clips onto the baffle plate (refer to Diagram 1).

3) Insert the back brick panel first by carefully slipping it between the back wall of the firebox and the rear log bracket (refer to Diagram 2).

4) Put the side panels in next. Tilt them in towards the middle of the firebox and put the bottom front corner in first. Be very careful not to scratch them on the firebox hardware. Place them flat up against the wall, they should fit snugly against the top of the firebox (refer to Diagrams 3 & 4).

5) Place the top bracket onto the front edge of the top panel (refer to Diagram 5).

6) Slide the top panel and bracket assembly carefully onto the baffle plate ensuring the panel is centered. Make sure the tabs of the top bracket fit into the baffle openings (refer to Diagrams 6 & 7). The back of the top brick panel sits on top of the bottom clips.

IMPORTANT
Dangerous operating conditions may occur if the panels are broken.

IMPORTANT
Your brick panels are manufactured from a special heat reflective ceramic material. Handle with care. (Do not force into position.)
LOG SET INSTALLATION

Read the instructions below carefully and refer to the diagrams. If logs are broken do not use the unit until they are replaced. Broken logs can interfere with the pilot operation.

The gas log kit (Part # 370-930) contains the following pieces:
   a) 02-83  Center Cross Log
   b) 02-84  Right Side Cross Log
   c) 02-85  Front Left Side Log
   d) 02-86  Front Right Side Log
   e) 02-87  Left Side End Log
   f) 02-88  Rear Log
   g) 02-89  Middle Right Side Log
   h) 02-90  Right Side End Log
   i) 902-154  Embers (Lava)
   j) 902-179  Vermiculite
   k) 946-669  Platinum Embers (supplied with packaged manual)

If you will be installing the optional brick panels, install them prior to installing the logs.

1) Carefully remove the logs from the box and unwrap them. The logs are fragile, handle with care - do not force into position.

2) Sprinkle the vermiculite all over the top of the base brick panel.

3) Line up the two holes on the underside of Log 02-88 with the 2 pins at the rear of the grate and position into place.

4) Place Log 02-85 on the front left side of the burner. Position the right end of the log into the pin on the burner and rest the left end of the log between the 1st grate post and the front tab.

5) Line up the two holes on the underside of Log 02-86 with the 2 pins on the right side of the burner and position into place.

The "02" reference numbers (i.e. 02-83) are molded into the rear of each log.
**INSTALLATION**

6) Embers should be placed in front of Log 02-85 and Log 02-86.

Separate platinum embers and place around the embers at the front of the burner. Avoid stacking platinum embers.

**CAUTION: DO NOT cover burner ports with embers.**

7) Place Log 02-83 onto the pin in Log 02-88 and position the notch on the bottom of the log into the 4th grate post.

8) Line up the hole on the underside of Log 02-84 with the pin on Log 02-86 and position the notch on the bottom of the log into the last grate post.

9) Place Log 02-89 against the notch in Log 02-84. Rest the notch at the end of the log against the grate.
10) Place Log 02-90 onto the right side of the grate. Position the cut-out on the underside of the log onto the grate bar.

11) Place Log 02-87 on the middle left side of the burner. Position the bottom rear of the log against the rear tab on the left side of the grate. Rest the front edge of the log in the notches on Log 02-85.
STANDARD FLUSH DOOR

The standard flush door comes with a black frame. To install the frame, simply hook the top door flange onto the top of the unit and swing the door towards the unit, diagram 1.

Diagram 1

Be careful that the glass gasket does not roll up; there must be a gap between the gasket and the door lip to ensure that the door sits securely on the unit. Diagram 2.

Diagram 2

Use the hook to pull the spring out until you can put the hook into the slot on the bottom door bracket. Repeat for 2nd and 3rd spring. See diagram 3.

Diagram 3

NOTE: Springs must always be OVER not under the gas line.

To remove the flush door, reverse the above steps.

FLUSH LOUVERS

1) Install the top louver by sliding the two bracket clips into the brackets located underneath the top of the firebox.

2) Install the bottom louver by folding the louver down and then sliding the Bottom Louver bracket down onto the 2 pins on the base of the unit (diagram 1). Secure with 1 screw as per diagram 2.

Diagram 1

Diagram 2

Note: Top and bottom louvers are different.

3) Open the bottom louver. Pull the Burner ON/OFF control box from inside the bottom of the firebox. Using the 2 screws on the louver, secure the control box in place.

OPTIONAL FLUSH TRIM

Attach the round magnets to the back of the top trim piece and to the bottom trim piece, then attach trim to the top and bottom of Flush door.
**OPTIONAL BAY DOOR**

The Bay louvers **MUST** be used with the Bay glass option.

The optional Bay door is an overlay on the flush front. The standard flush door and glass must remain on the unit.

1) Unhook the 2 spring loaded hooks from the bottom of the flush door.

2) Hook the top of the bay door over the flush door flange and swing the bottom against the bottom flange of the flush door.

3) Secure to the flush door bottom bracket with 2 screws provided.

4) Reconnect the 2 spring hooks securing the flush door.

Note: If any maintenance etc. must be done in the firebox, first remove the Bay louvers and door.

**OPTIONAL BAY TRIM**

Attach the supplied magnets each to the back of the top and bottom trim pieces, and attach trim to the top and bottom of Bay door. See diagrams 3 and 4.

1) Install top louver by sliding the two bracket clips into the brackets located on top of the bay door. See below. The fitted louver leaves a small gap between faceplate bottom and louver top.

2) Install bottom louver by sliding the two bracket clips into the brackets located underneath the bay door and secure with 1 screw on each end.

Note: Top and bottom louvers and brackets are different.

3) Open the bottom louver. Pull the Burner ON/OFF control box from inside the bottom of the fireplace. Using the 2 screws on the louver, secure the control box in place.
OPTIONAL FINISHING TRIM

NOTE: Remove both the Flush Louvers or Bay Louvers and the Flush Front or Bay Front prior to installing the Finishing Trim.

1) Install the Finishing Trim sides as shown in the diagram, line up the holes in the side trim with the holes in the firebox side.

2) Secure with 2 screws per side.

3) Loosen the 3 screws in the top inside edge of the firebox.

4) Slide the Finishing Trim Top over the Side Trim pieces and fit the bottom bracket slots over the screws. Tighten the 3 screws to secure.

DOUBLE SCREEN DOOR

1) Pull out the top louver.

2) Center the screen door and hook over the flush door.

3) Open the screen door(s) and secure the screen door to the flush door front with 2 clips on the bottom left and right side.

Clip locations

Clip installed on right side.
OPTIONAL REMOTE CONTROL

Can be used with Option 2 or 3 but not both.

Use the Regency® Remote Control Kit approved for this unit. Use of other systems may void your warranty.

The remote control kit comes with a hand held transmitter, a receiver and a wall mounting plate.

1) Choose a convenient location on the wall to install the receiver and the receptacle box (protection from extreme heat is very important). Run wires from the fireplace to that location. Use the Thermostat Wire Table.

2) Connect the two wires to the gas valve. See diagram.

3) Install 3 AAA alkaline batteries in transmitter and 4 AA alkaline batteries in the receiver. Install the receiver and its cover in the wall. Switch the remote receiver to “remote” mode. The remote control is now ready for operation.

OPTIONAL WALL SWITCH

Can be used with Option 1 or 3 but not both.

1) Run the supplied 15’ of wire through the back gas inlet opening. Be careful not to damage wire.

Note: We recommend a maximum of 15’ of wire but if you wish to go with a longer run, use the Thermostat Wire Table.

2) Connect the wire to the supplied wall switch and install into the receptacle box.

CAUTION
Do not connect millivolt wall switch wire to a 120V wire.

OPTIONAL WALL THERMOSTAT

Can be used with Option 1 or 2 but not both.

A wall thermostat may be installed if desired, connect the wires as per the wiring diagram in “Wiring Diagram” section. Use the table below to determine the maximum wire length.

Note: Preferable if the thermostat is installed on an interior wall.

Regency® offers an optional programmable thermostat but any 250-750 millivolt rated non-anticipator type thermostat that is CSA, ULC or UL approved may be used.

CAUTION
Do not connect millivolt wall thermostat wires to a 120V wire.

Regency® P48-2 Zero Clearance Direct Vent Gas Fireplace
WIRING DIAGRAMS

No electrical power supply is required for the gas control to operate. 120 Volt AC power is needed for the fan switch and blower. The fan can be hard wired if desired. A terminal block is provided on the left hand side of the unit. A three wire power cord can also be used and plugged into a suitable receptacle.

CAUTION: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation.

NOTE: Even if the fan is not purchased with the unit, it is still a good idea to hardwire the terminal block in case the fan is installed at a later date.

** However DO NOT leave this connection live until the fan is installed.**

Caution: Ensure that the wires do not touch any hot surfaces and are away from sharp edges.

For NATURAL GAS Units and Units NOT Equipped with DC Spark Boxes
For PROPANE Units and Units Equipped with DC Spark Boxes *

*For installation of the DC Spark Box refer to the LP Conversion instructions in this manual.
INSTALLATION

INSTALLING THE OPTIONAL FAN

120 Volt AC power is needed for the fan switch and blower. The fan can be hard wired if desired. The receptacle box should be installed on the left hand side of the unit by a qualified electrician. The neutral (wider) slot of the polarized receptacle should be at the top.

Unit must be grounded at all times. Do not cut the ground terminal off under any circumstances.

1) Shut the power off.

2) Remove the standard flush door and the optional bay door, if installed. Open the bottom louver door.

3) Remove the 2 screws holding the Burner ON/OFF switch and bracket to the bottom louver and lift the assembly out.

4) Turn the fan base on its side (with the base facing towards you) and then slide the fan in towards the rear of the unit. Turn the fan upright and slip it over the two mounting studs. Take care not to damage the insulation on the fan base. Ensure that the fan blades do not rub against the valve tubing. Diagram 1.

5) Connect fan ground cable to ground lug. Refer to wiring diagram.

6) Slide the thermodisc/cover assembly into the bracket clip on the underside of the firebox. Check that no wire will touch the hot surfaces. Diagram 2.

7) Attach the Fan control box to the Burner ON/OFF control box. Diagram 3.

8) Secure the two boxes together with one screw.

9) Attach the two control boxes to the bottom louver and tighten the 2 screws on the left side and 2 screws on the right side.

10) Secure the fan wires and power cord by attaching one of the adhesive backed wire holder clips (Part #910-199) onto the stove base. Use the second clip to bundle up the wires approximately 4" from the control box. Ensure that there is no interference with the wires when the louver is closed and that no wire will touch the hot metal surfaces or sharp edges.

11) Plug the fan power cord into the rear end of the receptacle box to provide the maximum clearance from the louveres.

TO REMOVE THE FAN

1) Shut the power off.

2) Reverse the above instructions.

NOTE:
The bearings are lubricated for life. Do not lubricate them. Make sure you vacuum the fan area on a regular basis.

IMPORTANT:
These fans collect a lot of dust from within your home. Ensure you maintain these fan motors on a regular basis by vacuuming out the fan blades and housing using a soft brush nozzle.
OPERATING INSTRUCTIONS

1) Read and understand these instructions before operating this appliance.
2) Check to see that all wiring is correct and enclosed to prevent possible shock.
3) Check to ensure there are no gas leaks.
4) Make sure the glass in the door frame is properly positioned. Never operate the appliance with the glass removed.
5) Verify that the venting and cap are unobstructed.
6) Ensure that the brick panels are installed.
7) Verify log placement. If the pilot cannot be seen when lighting the unit, the logs have been incorrectly positioned.
8) The unit should never be turned off, and on again without a minimum of a 60 second wait.

LIGHTING PROCEDURE

IMPORTANT: To ignite or reignite the pilot, you must first release the tension springs below the door. Only when the pilot holds, without pressure being applied to the control knob, reapply the tension springs to the door. The unit must not be operated with the tension springs unattached.

NOTE: For all propane units and units equipped with electric spark boxes, see “Copy of Lighting Plate Instructions” section for more details.

IMPORTANT: Gas on/off knob cannot be turned from “PILOT” to “OFF” unless it is partially depressed.
1) Turn burner OFF using “ON/OFF” switch.
2) Turn gas control knob so indicator points to “OFF” position and allow 5 minutes for any gas in the combustion chamber to escape.
3) Turn gas control knob counterclockwise so indicator points to the “PILOT” position. Depress the gas control knob fully. Depress the igniter button several times until the pilot lights. After approximately one minute, release the gas control knob. The pilot flame should continue to burn. If the pilot does not remain lit, repeat operation allowing a longer period before releasing gas control knob.
4) When the pilot stays lit, turn the gas knob further counterclockwise to the “ON” position.
5) Use the wall switch, thermostat or remote control to turn on the unit.
6) Rotate the flame height regulator to adjust the flame height higher or lower.

SHUTDOWN PROCEDURE

1) Use the wall switch, thermostat or remote control to turn off the main burner.
2) Turn the main gas control clockwise to the “OFF” position to turn off the pilot.
3) Turn off all electric power to appliance if service is to be performed.

FIRST FIRE

DO NOT BURN THE APPLIANCE WITHOUT THE GLASS FRONT IN PLACE.

The first fire in your stove is part of the paint curing process. To ensure that the paint is properly cured, it is recommended that you burn your fireplace for at least four (4) hours the first time before you use it with the fan on.

When first operated, the unit will release an odour caused by the curing of the paint, the burning off of any oils remaining from manufacturing. Smoke detectors in the house may go off at this time. Open a few windows to ventilate the room for a couple of hours.

Note: When the glass is cold and the appliance is lit, it may cause condensation and fog the glass. This condensation is normal and will disappear in a few minutes as the glass heats up.

AERATION ADJUSTMENT

The air shutter can be adjusted by moving the adjusting wire up or down. The wire is accessed through the bottom louver opening. Open the air shutter for a blue flame or close for a more yellow flame. The burner aeration is factory set but may need adjusting due to either the local gas supply or altitude.

Minimum Air Shutter Opening: 3/16” Natural Gas Fully Open Propane

CAUTION: Carbon will be produced if air shutter is closed too much.

Note: Any damage due to carboning resulting from improperly setting the aeration controls is NOT covered under warranty.

During the first few fires, a white film may develop on the glass front as part of the curing process. The glass should be cleaned after the unit has cooled down or the film will bake on and become very difficult to remove. Use a non-abrasive cleaner and DO NOT ATTEMPT TO CLEAN THE GLASS WHILE IT IS HOT.

Adjustment Wire - Pull down to open or push up to close aeration cap.

Closed - Tall yellow Open - Short Blue

Note: Aeration Adjustment should only be performed by an authorized Regency® Installer at the time of installation or service.
NORMAL OPERATING SOUNDS OF GAS APPLIANCES

It is possible that you will hear some sounds from your gas appliance. This is perfectly normal due to the fact that there are various gauges and types of steel used within your appliance. Listed below are some examples. All are normal operating sounds and should not be considered as defects in your appliance.

Blower:
Regency® gas appliances use high tech blowers to push heated air farther into the room. It is not unusual for the fan to make a “whirring” sound when ON. This sound will increase or decrease in volume depending on the speed setting of your fan speed control.

Burner Tray:
The burner tray is positioned directly under the burner tube and logs and is made of a different gauge material from the rest of the firebox and body. Therefore, the varying thicknesses of steel will expand and contract at slightly different rates which can cause “ticking” and “cracking” sounds. You should also be aware that as there are temperature changes within the unit these sounds will likely re-occur. Again, this is normal for steel fireboxes.

Blower Thermodisc:
When this thermally activated switch turns ON it will create a small “clicking” sound. This is the switch contacts closing and is normal.

Pilot Flame:
While the pilot flame is on it can make a very slight “whisper” sound.

Gas Control Valve:
As the gas control valve turns ON and OFF, a dull clicking sound may be audible, this is normal operation of a gas regulator or valve.

Unit Body/Firebox:
Different types and thicknesses of steel will expand and contract at different rates resulting in some “cracking” and “ticking” sounds will be heard throughout the cycling process.

Copy of the Lighting Plate Instructions

FOR YOUR SAFETY READ BEFORE LIGHTING

This appliance must be installed in accordance with local codes, if any; if none, follow the National Fuel Gas Code, ANSI Z223.1/NFPA 54, or Natural Gas and Propane Installation Codes CSA B149.1, (Australia: AG601, New Zealand: NZS 5261)

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life. Improper installation, adjustment, alteration, service, or maintenance can cause injury or property damage. Refer to the owner’s information manual provided with this appliance. For assistance or additional information consult a qualified installer, service agency or gas supplier.

A) This appliance has a pilot which must be lighted by hand. When lighting the pilot, follow these instructions exactly.

B) BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS:
- Do not try to light any appliance.
- Do not touch any electric switch, do not use any phone in your building.
- Immediately call your gas supplier from a neighbour's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.

C) Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don’t try to repair it, call a qualified service technician. Force or attempted repair may result in a fire or explosion.

D) Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

E) This appliance needs fresh air for safe operation and must be installed so there are provisions for adequate combustion and ventilation.

CAUTION: Hot while in operation. Do not touch. Severe Burns may result. Due to high surface temperatures keep children, clothing and furniture, gasoline and other liquids having flammable vapors away. Keep burner and control compartment clean. See installation and operating instructions accompanying appliance.

LIGHTING INSTRUCTIONS

STOP! Read the safety information above on this label.

FOR UNITS NOT EQUIPPED WITH ELECTRIC SPARK BOXES:
1) Push in gas control knob slightly and turn clockwise to “OFF”. Knob cannot be turned from “PILOT” to “OFF” unless knob is pushed in slightly. Do not force.

   PILOT BURNER VEILEUSE THERMOPHILE ELEMENT THERMO- ELECTRIQUE

   OFF

2) Wait five (5) minutes to clear out any gas. If you then smell gas STOP! Follow step “B” in the Safety Information above on this label. If you don’t smell gas, go to the next step.

3) Turn knob on gas control counterclockwise to “PILOT”.

4) Push in control knob all the way and hold in. Continually push and release the black button on spark igniter until pilot lights. Continue to hold the control knob in for about 1/2 minute after the pilot is lit. Release knob and it will pop back up. Pilot should remain lit. If it goes out, repeat steps 1) to 4).

5) If knob does not pop up when released, stop and immediately call your service technician or gas supplier. If the pilot will not stay lit after several tries, turn the gas control knob to “OFF” and call your service technician or gas supplier.

6) Use rocker switch to operate main burner.

FOR ALL PROPANE UNITS AND UNITS EQUIPPED WITH ELECTRIC SPARK BOXES:
1) Push in gas control knob slightly and turn to “PILOT” position.

2) Push in control knob all the way and hold in until the pilot lights up. Continue to hold the control knob in for about 20 seconds after the pilot is lit. Release knob.

3) Push in gas control knob slightly and turn to “ON” position.

4) Turn ON the flame switch.

TO TURN OFF GAS APPLIANCE

1) Turn off the flame switch.

2) Push in the gas control knob slightly and turn clockwise to “OFF”. Do not force.

3) Turn off all electric power to the appliance if service is to be performed.

You may shut off the pilot during prolonged non use periods to conserve fuel.

DO NOT REMOVE THIS INSTRUCTION PLATE
MAINTENANCE INSTRUCTIONS

1) Always turn off the gas valve before cleaning. For relighting, refer to lighting instructions. Keep the burner and control compartment clean by brushing and vacuuming at least once a year. When cleaning the logs, use a soft clean paint brush as the logs are fragile and easily damaged.

2) Clean appliance and door with a damp cloth (never when unit is hot). Never use an abrasive cleaner. The glass should be cleaned with a gas fireplace glass cleaner. The glass should be cleaned when it starts looking cloudy.

3) The heater is finished in a heat resistant paint and should only be refinished with heat resistant paint. Regency® uses StoveBright Paint - Metallic Black #6309.

4) Make a periodic check of burner for proper position and condition. Visually check the flame of the burner periodically, making sure the flames are steady; not lifting or floating. If there is a problem, call a qualified service person.

5) The appliance and venting system must be inspected before use, and at least annually, by a qualified field service person, to ensure that the flow of combustion and ventilation air is not obstructed.

Note: Never operate the appliance without the glass properly secured in place.

6) Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

7) In the event this appliance has been serviced check that the vent-air system has been properly resealed & reinstalled in accordance with the manufacturer’s instructions.

8) Verify operation after servicing.

GENERAL VENT MAINTENANCE

Conduct an inspection of the venting system semiannually. Recommended areas to inspect as follows:

1) Check the Venting System for corrosion in areas that are exposed to the elements. These will appear as rust spots or streaks, and in extreme cases, holes. These components should be replaced immediately.

2) Remove the Cap, and shine a flashlight down the Vent. Remove any bird nests, or other foreign material.

3) Check for evidences of excessive condensation, such as water droplets forming in the inner liner, and subsequently dripping out the joints. Continuous condensation can cause corrosion of caps, pipe, and fittings. It may be caused by having excessive lateral runs, too many elbows, and exterior portions of the system being exposed to cold weather.

4) Inspect joints, to verify that no pipe sections or fittings have been disturbed, and consequently loosened. Also check mechanical supports such as Wall Straps, or plumbers’ tape for rigidity.

LOG REPLACEMENT

The unit should never be used with broken logs. Turn off the gas valve and allow the unit to cool before opening door and carefully remove the logs. (The pilot light generates enough heat to burn someone.) If for any reason a log should need replacement, you must use the proper replacement log. The position of these logs must be as shown in the diagrams under Log Installation.

Note: Improper positioning of logs may create carbon build-up and will severely alter the unit’s performance which is not covered under warranty.

THERMOPILE / THERMOCOUPLE

1) Open the Bottom Louvers or Grills. Remove the Top Louver or Grill.

2) Open and remove door.

3) Remove log set and embers.

4) Remove grate and burner.

5) Disconnect thermocouple by loosening nut from the valve with a 9mm wrench. Disconnect thermopile by loosening 2 screws marked TP on the valve.

6) Remove 2 screws from the pilot assembly and pull up far enough to be able to loosen the thermocouple or thermopile with a 7/16” wrench. NOTE: the pilot line is very fragile, use caution when pulling it up.

7) Drop the thermocouple or thermopile down through the extrusion and pull it out of the unit.

8) Reinstall the new ones in reverse order.

GLASS GASKET

If the glass gasket requires replacement use a tadpole glass gasket (Part # 936-155).

GOLD-PLATED LOUVERS & TRIM

The 24 carat gold-plated finish on the louvers and trim requires little maintenance, and need only be cleaned with a damp cloth.

DO NOT use abrasive materials or chemical cleaners, as they may harm the finish and void the warranty.

Clean any fingerprints off before turning the unit on.
MAINTENANCE

DOOR GLASS

Your Regency® fireplace is supplied with high temperature 5mm-Ceramic glass. If your glass requires cleaning, we recommend using an approved glass cleaner available at all authorized dealers. Do not use abrasive materials.

CAUTION & WARNINGS:

* Do not clean when the glass is hot.
* The use of substitute glass will void all product warranties.
* Care must be taken to avoid breakage of the glass.
* Do not strike or abuse the glass.
* Do not operate this fireplace without the glass front or with a cracked or broken glass front.
* Wear gloves when removing damaged or broken glass.
* Replacement of the glass panel(s) should be done by a licensed or qualified service person.

GLASS REPLACEMENT

In the event that you break your glass by impact, purchase your replacement from an authorized Regency® dealer only.

Replacement glass is shipped already installed into the door frame. Reinstall as per Glass Door Installation in “Standard Flush Door” section.

CAUTION: Wear gloves when removing damaged or broken glass.

WARNING: Do not operate the appliance with the glass panels removed, cracked or broken. Replacement of the glass panels should be done by a licensed or qualified service person.

BAY GLASS REPLACEMENT

1) Remove the door from the unit and place on a soft surface to prevent scratching.
2) Remove the nuts holding the glass clips in place and remove.
3) Replace the glass. The glass must have gasketing around it.
4) Reverse the previous steps, replace the glass clips and fasten with the nuts but do not over tighten, as this can break the glass.
5) Replace door on the stove and check the seal.

INSTALLING VALVE

1) Attach the valve to the valve bracket with the 4 (m5x8 metric) screws provided.
2) Reconnect the “gas out” flare fitting with an 11/16” wrench.
3) Reconnect the “gas out” flare nut with a 13/16” wrench.
4) Install piezo ignitor push button assembly and reconnect wire.
5) Reconnect the quick drop out thermocouple nut with a 9mm wrench.
6) Reconnect the pilot tube nut with a 7/16” wrench.
7) Scrape off the old gasket from the floor of the firebox and from the valve tray assembly.
8) Install a new gasket and reinstall the valve tray assembly.

Note: Failure to install a new gasket may severely affect the appliance performance.

9) Reinstall the 10 hold down screws.
10) Hook up the 2 TP and 2 TH wires to the appropriate connections on the valve.
11) Reinstall the two bottom deflectors and brick panels.
12) Install burner and grate assembly.
13) Hook up the gas line and check for gas leaks with a soap and water solution or a gas leak detector. (Do not use open flame for leak testing.)
14) Fire up the unit temporarily.
15) Check the manifold pressure.
16) Reinstall the logs and brick panels as needed.
17) Close the door and replace the louvers.
18) Fire up the unit again and check for proper flame appearance and glow on logs.
REMOVING VALVE

1) Shut off the gas supply.

2) Remove the louvers (and bay door if it has been installed).

3) Open the flush door and remove the door.

4) Remove the logs and side brick panels, if installed.

5) Remove the grate by lifting up and out.

6) Remove the burner by removing the screw on the left side and then slide the burner to the left and lift out.

7) Remove the right and left side deflectors by removing the 2 screws on each deflector.

8) Remove the base brick panels.

9) Disconnect the inlet gas line.

10) Remove the 10 Phillips head screws securing the valve tray assembly in place and then lift the entire assembly out.

11) Disconnect the 2 TP wires and the 2 TH wires from the valve.

12) Undo the pilot tube from the valve with a 7/16'' wrench.

13) Undo the quick drop out thermocouple nut on the valve with a 9mm (metric) wrench.

14) Remove the Piezo igniter wire and push button assembly.

15) Undo the "gas out" flare nut with a 13/16'' wrench.

16) Undo the "gas out" flare fitting with an 11/16'' wrench.

17) Remove the 4 Phillips head screws from the sides of the valve bracket and remove valve.

Hint: If you are using black pipe, ensure that there is a union by the valve, otherwise removal will be almost impossible.

WARRANTY

Regency Fireplace Products are designed with reliability and simplicity in mind. In addition, our internal Quality Assurance Team carefully inspects each unit thoroughly before it leaves our facility. FPI Fireplace Products International Ltd. is pleased to extend this limited lifetime warranty to the original purchaser of a Excalibur Product. This warranty is not transferable.

The Warranty: Limited Lifetime
The combustion chamber, heat exchanger, burner tubes/panes, logs, brick panels and gold plating (against defective manufacture only) are covered under the Limited Lifetime Warranty for five (5) years for parts and subsidized labour* and parts only thereafter.

Glass is covered for lifetime against thermal breakage only, parts and subsidized labour* for five (5) years and parts only thereafter from date of purchase.

External casting, surrounds and grills are covered against cracks and warps resulting from manufacturer defects, parts and subsidized labour* for three (3) years from the date of purchase and parts only thereafter.

Special Finishes - One year on brushed nickel and antique copper full screens and doors. You can expect some changes in color as the product "ages" with constant heating and cooling. FPI warranties the product for any manufacturing defects on the original product. However, the manufacturers warranty does not cover changing colors and marks, ie. finger prints, etc applied after the purchase of the product. Damage from the use of abrasive cleaners is not covered by warranty.

Electrical and mechanical components such as blowers, switches, wiring, thermodiscs, FPI remote controls, spill switches, thermopiles, thermocouples, pilot assembly components, and gas valves are covered for two years parts and one year subsidized labour* from the date of purchase. Blowers and valves replaced under warranty are considered repairs and continue as if new with appliance. ie. twelve (12) months from original purchase date of appliance with a minimum of three (3) months coverage from date of replacement.

FPI venting components are covered parts and subsidized labour* for three (3) years from date of purchase.

repair/service parts purchased by the consumer from FPI after the original coverage has expired on the unit will carry a 90 day warranty, valid with a receipt only. Any item shown to be defective will be repaired or replaced at our discretion. No labor coverage is included with these parts.

Conditions:

Any part or parts of this unit which in our judgement show evidence of such defects will be repaired or replaced at FPI's option, through an accredited distributor or agent provided that the defective part be returned to the distributor or agent Transportation Prepaid, if requested.

Porcelain/Enamel - Absolute perfection is either guaranteed nor commercially possible. Any chips must be reported and inspected by an authorized dealer within three days of installation. Reported damage after this time will be subject to rejection.

It is the general practice of FPI to charge for larger, higher priced replacement parts and issue credit once the replaced component has been returned to FPI and evaluated for manufacturer defect.

The authorized selling dealer is responsible for all in-field service work carried out on your Regency product. FPI will not be liable for results or costs of workmanship from unauthorized service persons or dealers.

Installation and environmental problems are not the responsibility of the manufacturer and therefore are not covered under the terms of this warranty policy.

Embers, rockwool, gaskets, door handles and paint are not covered under the terms of this warranty policy.

Any unit which shows signs of neglect or misuse is not covered under the terms of this warranty policy.

The warranty will not extend to any part which has been tampered with or altered in any way, or in our judgement has been subject to misuse, improper installation, negligence or accident, spillage or downdrafts caused by environmental or geographical conditions, inadequate ventilation, excessive offsets, negative air pressure caused by mechanical systems such as furnaces, fans, clothes dryer, etc.

Freight damage to stoves and replacement parts is not covered by warranty and is subject to a claim against the freight carrier by the dealer.

FPI will not be liable for travel costs for service work.

Performance problems due to operator error will not be covered by this warranty policy.

Products made or provided by other manufacturers and used in conjunction with the operation of this appliance without prior authorization from FPI, may nullify your warranty on this product.

Any alteration to the unit which causes sooting or carboning that results in damage to the interior / exterior facia is not the responsibility of FPI.

* Subsidy according to job scale as predetermined by FPI.
FPI fireplaces are designed with reliability and simplicity in mind. In addition, our internal Quality Assurance Team carefully inspects each unit thoroughly before it leaves our door.

FPI Fireplace Products International Ltd. is pleased to extend this Limited Lifetime Warranty to the original purchaser of a FPI Product.
